

08075062 & 08075200 BATTERY DISCONNECT SWITCHES

250A-500A • SPST • IP67-9K • M10 Studs • Bistable/Magnetic Current Isolating Switches

Specifications

Max Operating Voltage:	12V/24V DC: 08075062-08075063 08075064-08175160-08175161 08175162-08075163-08075164 24V DC: 08075100-08075200
Max Continuous Current:	250A 08075062-08075063 08075064-08175161-08175162 08075163-08075100-08075200 500A 08075160-08075164
Intermittent Current:	2000A at 5 sec
Operating Temp:	-40 °C to +85 °C
Ingress Protection:	IP67-9K
Contacts:	Silver-plated Copper
Terminals:	M10 (Nickel-plated brass)

Applications

- Heavy trucks
- Buses
- Construction
- Commercial vehicles
- Agricultural
- Marine

Mounting Diagram

Description

In shape and design the bistable/magnetic current isolating switches ON-OFF position is different to traditional current isolating switches. They use a minimum current when they are turned on, models with "magnetic ON-OFF position" absorb current only during the commuting phase or when switched from (OFF) to (ON) and vice versa. Generally referred to as "bistable with zero consumption", their switches turn to closed or open state of the electric circuit.

In this range we have the version with positive and negative disconnection, positive or negative disconnection (watchdog), ADR (Dangerous road materials) version and only positive version.

Features/Benefits

- 250A-500A continuous current rating
- Waterproof IP67/9K

Ordering Information

PART NUMBER	VOLTAGE	POLE	AMPERAGE	CIRCUITRY	MOUNTING	INGRESS	TERMINAL NUTS	IMAGE	DIAGRAM	NOTES
08075062	12V-24V DC	(+/-)	250A	SPST	Bolt-Down	IP67-9K	M10 Silver-plated copper	B	1	DIN connector (4 way) 2 pins
08075063	12V-24V DC	(+/-)	250A	SPST	Bolt-Down	IP67-9K	M10 Silver-plated copper	A	1	Superseal 2 way

Function Table	INPUT		OUTPUT	
	CAB switch	CHASSIS switch	Aux (open drain)	MAIN CONTACT
1	ON	ON	OFF	CLOSED
2	ON	ON=>OFF	Temporary ON	Closed=>Open
3	ON	OFF	OFF	Open
4	ON=>OFF	ON	Temporary ON	Closed=>Open
5	OFF	ON	OFF	Open
6	OFF	OFF	OFF	Open

Attention!
The CAB SWITCH must be of the type (ON)-0-OFF: with 0 in center (no connection) by one side an unstable position (to apply immediate ON) by the another side a stable position (to apply delayed OFF). This is to have the proper delayed opening.

PIN 1: Positive (to feed the coil for switching ON or OFF)

PIN 2: Emergency switch-off signal (feeding this PIN you have an immediate switching off of the relay)

PIN 3: Ground (to feed the coil for switching ON or OFF)

PIN 4: Signal to switch OFF or to switch ON (when on this PIN there is a signal that the relay will change its status)
