<sup>1</sup> The maximum volt\*μSec rating limits the peak flux density to 2200 Gauss when used in a unipolar drive application. For bi-polar drive applications a maximum volt\*μsec of two times this rating is acceptable (i.e. 2\* (volt\*μsec rating) Volt\*μsec = (voltage applied to the primary) \* duty cycle / Frequency = V \* alpha / Freq\_Hz = V \* μsec

<sup>2</sup> Leakage inductance is measured at primary terminals with all secondaries shorted.

- INRCORE's standard lead finish is tin/lead (Sn63/Pb37). Parts can be ordered Non-Lead by adding "NL" to the part number (i.e. PL2973NL).
- To order in Tape & Reel packaging, add the suffix "T" to the part number (i.e. PL3280T).
