PRODUCT OVERVIEW

The *102MC* Industrial Media Converter is designed to allow the connection of 10/100BaseTX Ethernet devices to your 100BaseFX fiber cabling infrastructure.

The *102MC* provides one RJ-45 auto sensing 10/100BaseTX port and one 100BaseFX port. The RJ-45 port is full/half duplex capable, using "state of the art" Ethernet switching technology. The *102MC* auto-negotiates the speed and flow control capabilities of the TX copper port connection, and configures itself automatically. The 100BaseFX fiber optic port utilizes industry standard ST or SC connectors and is configured for full duplex operation. Both multimode and singlemode fiber models are available.

Unlike most media converters the *102MC* uses switching technology. This means that 10Mbps devices can be connected today and upgraded to 100Mbps devices later. The switching fabric simply scales up or down automatically to match specific network environments.

The *102MC* supports up to 2,000 MAC addresses, enabling these products to support extremely sophisticated and complex network architectures.

The *N-TRON 102MC* is well suited to convert 10/100 BaseTX industrial devices to fiber, allowing you to take advantage of the inherent advantages of fiber based infrastructure. Compared to copper based systems, fiber provides increased noise immunity and longer cable lengths.

The *102MC* has extended operating environmental specifications to meet the harsh needs of the industrial environment. For cost savings and convenience the media converter can be DIN-Rail mounted alongside Ethernet I/O or other industrial equipment.

The unique compact size provides a small footprint, conserving space in the most critical dimension. The *102MC* can also be panel mounted if desired.

To increase reliability, the *102MC* includes redundant power inputs. LEDs are provided to display the link status and activity of each port, as well as power on/off status.
