

Typical Applications

The HMC734LP5(E) is ideal for:

- Point-to-Point/Multi-Point Radio
- Test Equipment & Industrial Controls
- SATCOM
- Military End-Use

General Description

The HMC734LP5(E) is a GaAs InGaP Heterojunction Bipolar Transistor (HBT) MMIC VCO. The HMC734LP5(E) integrates a resonator, negative resistance device, varactor diode and features a divide-by-4 frequency output. The VCO's phase noise performance is excellent over temperature, shock, and process due to the oscillator's monolithic structure. Power output is +18 dBm typical from a +5V supply voltage. The prescaler function can be disabled to conserve current if not required. The voltage controlled oscillator is packaged in a leadless QFN 5x5 mm surface mount package, and requires no external matching components.

Electrical Specifications, $T_A = +25^{\circ}$ C, Vcc (Dig), Vcc (Amp), Vcc (RF) = +5V
