#### **Description**

Littelfuse 16R Series Radial Leaded PTCs are designed to provide resettable overcurrent protection serving a wide range of electronics applications. With maximum 16 volts and maximum 100-ampere short circuit rating, they offer an ideal solution for USB protection.

#### **Features**

- 100A short circuit rating
- 16V Operating voltages
- Fast time-to-trip
- Meets all USB protection requirements
- RoHS compliant, Lead-Free and Halogen-Free\*

#### **Applications**

- Computers & peripherals
- Any USB application
- General Electronics

# **Additional Information**

CAUTION: Operation beyond the specified rating may result in damage and possible arcing and flame.

- I hold = Hold current: maximum current device will pass without tripping in 20°C still air.
- hold = 1838 Selection and some device will pass without tripping in 20°C still air.

  I trip = Trip current: minimum current at which the device will trip in 20°C still air.

  Viet = Maximum voltage the device can withstand without damage at rated current (I max)
- $\mathbf{V}_{00}^{\text{m}}$  = The device regular operation voltage
- , = Maximum fault current device can withstand without damage at rated voltage (V<sub>max</sub>
- $\mathbf{P}_{\mathbf{d}}^{\text{max}}$  = Power dissipated from device when in the tripped state at 20°C still air.

- R min = Minimum resistance of device in initial (un-soldered) state
- = Typical resistance of device in initial (un-soldered) state.  $\mathbf{R}_{\text{1max}}^{\text{TP}}$  = Maximum resistance of device at 20°C measured one hour after tripping.
- \* Effective February 11, 2010 onward, all 600R PTC products will be manufactured Halogen Free (HF). Existing Non-Halogen Free 600R PTC products may continue to be sold, until supplies are depleted. This change will have no effect on 600R product specifications or performance

#### WARNING

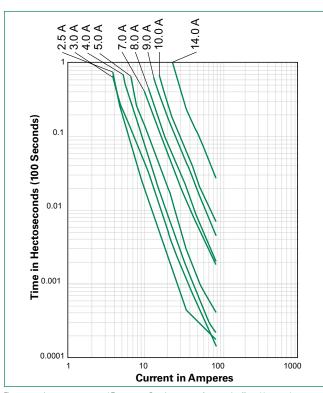

- Users shall independently assess the suitability of these devices for each of their applications
- Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire
- These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration
- . Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the performance of these PPTC devices
- These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses
- Circuits with inductance may generate a voltage (L di/dt) above the rated voltage of the PPTC device.

# **Average Time Current Curves**

The average time current curves and Temperature Rerating curve performance is affected by a number or variables, and these curves provided as guidance only. Customer must verify the performance in their application.

# **Temperature Rerating Curve**

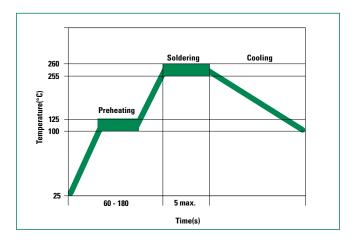

#### Note:

Typical Temperature rerating curve, refer to table for derating data

Radial Leaded > 16R Series

# **Soldering Parameters - Wave Soldering**

| Pre-Heating Zone | Refer to the condition recommended by the flux manufacturer.  Max. ramping rate should not exceed 4°C/Sec.  |
|------------------|---|
| Soldering Zone   | Max. solder temperature should not exceed 260°C. Time within 5°C of actual Max. solder temperature within 3 - 5 seconds.  Total time from 25°C room to Max. solder temperature within 5 minutes including Pre-Heating time. |
| Cooling Zone     | Cooling by natural convection in air.  Max. ramping down rate should not exceed 6°C/Sec.  |

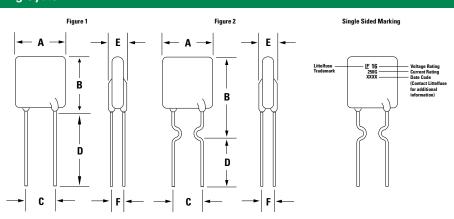

### **Physical Specifications**
