

Smart Storage Solutions Overview

Smart Storage Performance, Power, Security and Reliability

With the massive growth of data centers, performance, power and reliability are more important considerations than ever.

Performance requirements are driven by both the increased adoption of Flash-based SSDs and the increasing sizes of HDD arrays. Data centers are looking to take advantage of the performance that these Flash-based drives promise and require storage solutions that can deliver manageability and data availability without compromising performance.

Power is a significant component of a data center's operating expenses. Optimizing power for cold storage tiers in the data center, for example, delivers substantial benefits to the bottom line.

Data security has become one of the highest priorities for data centers and cloud computing environments as enterprises seek to safeguard customer information, classified company documentation and communications, financial records, employee payroll records and other confidential data.

As more mission-critical data finds its way to data centers, end customers insist on reduced downtime, improved response times to issues and a more positive end-user experience overall.

The Adaptec® SmartRAID 3100, SmartHBA 2100 and HBA 1100 product families are based on the company's latest 28 nm SmartROC 3100 and SmartROC 2100 storage controller Integrated Circuits (ICs). The SmartRAID 3162-8i/e adapter includes maxCrypto™, the industry's only data-at-rest controller-based encryption solution, that provides a superior solution over self-encrypting drives.

Microchip's unified Smart Storage stack powers the entire family of products, leveraging core IP that has shipped in over 30 million servers, delivering one of the industry's most reliable and highest-performing storage controller software platforms.

Technology Leadership With Data Encryption

Solutions for data-at-rest encryption are now a security requirement in many market segments such as health care, finance, e-commerce, federal government branches and insurance—a significant overall percentage of the deployed storage.

Data center managers face the challenge of safeguarding data while still meeting continually-increasing performance demands for large-scale applications, such as web serving, file serving, databases, Online Transaction Processing (OLTP), machine learning and High-Performance Computing (HPC).

Now available, the SmartRAID 3162-8i/e with maxCrypto, delivers data protection with little to no impact on latency or I/O performance. The 3162-8i/e offers superior advantages over Self-Encrypting Drives (SEDs) and integrates seamlessly into existing storage infrastructures, allowing data centers to deploy a uniform, scalable encryption strategy across the enterprise.

Smart Storage Solutions Overview

Each New Product Family Has Unique, Differentiating Features

SmartRAID 3100

The SmartRAID 3100 is optimized for Enterprise storage applications that require the highest level of data availability and data center applications that benefit from caching.

- Adapters with up to 24 ports using 28 nm SAS/SATA-optimized silicon, offering the industry's lowest power
- Zero Maintenance Cache Protection (ZMCP) with a cache size up to 4 GB with integrated cache backup circuitry for optimal cost, thermal performance and operating efficiency
- Board options without cache backup
- Mixed mode enables drives to be independently configured as raw drives or as part of a logical volume
- maxCache 4.0 included on 315x and 316x adapters
- maxCrypto controller-based encryption on the 3162-8i/e adapter

SmartHBA 2100

The SmartHBA 2100 is optimized for Software-Defined Storage (SDS) applications that require hardware RAID for OS boot drives as well as entry-level RAID for SMBs.

- The only basic hardware RAID solution offering a fully featured, high-performance Host Bus Adapter (HBA) for drives configured as raw drives, required for multi-path IO and SDS applications
- RAID levels 0, 1, 10, 5
- Industry's only basic hardware RAID solution with more than 8 ports
- Mixed mode enables drives to be independently configured as raw drives or as part of a logical volume

HBA 1100

The HBA 1100 is optimized for SDS, cold storage, and raw high-performance connectivity.

- Adapters with up to 24 ports using 28 nm SAS/SATA-optimized silicon, offering the industry's lowest power
- Support for host-managed and host-aware Shingled Magnetic Recording (SMR) drives
- Broad OS driver support, including inbox driver support
- Performance of up to 1.7M IOPS

SmartRAID

SmartRAID 3100 RAID Adapters

Adaptec 12 Gbps SmartRAID 3100 adapters have an 8-lane PCIe® Gen 3 host bus interface, a SmartROC 3100 processor, an MD2 low-profile form factor, and can be scaled to a maximum of 256 SAS/SATA devices*. The newest addition, the SmartRAID 3162-8i/e, provides the industry's only data-at-rest controller-based encryption solution, maxCrypto. Supporting operating systems include include Microsoft Windows®, Red Hat, SUSE, Fedora, Debian, Ubuntu, Sun Solaris, FreeBSD, VMware ESXi, open-source Linux® drivers and inbox drivers.

SmartHBA and Host Bus Adapters (HBA)

Adaptec 12 Gbps HBAs have an 8-lane PCIe Gen 3 host bus interface, a SmartIOC 2100 processor, an MD2 low-profile form factor, and can be scaled to a maximum of 256 SAS/SATA devices*. In addition, the SmartHBA 2100 series uniquely combines the capabilities of a full-featured HBA, with those of a basic hardware RAID adapter. Supporting operating systems include Microsoft Windows, Red Hat, SuSE, CentOS, Ubuntu, VMware ESXi, FreeBSD, Solaris and Citrix Xen Server.
