

SiPM Module

The SiPM Module integrates a stable voltage supply, signal amplification, interfaces and the SiPM detector in a compact plug and play unit. Included software allows optimization of the operating point of the detector to the respective application by the precise and individual setting and storage of the supply voltage. The new SiPM Module is used for test set-ups in research and development and is ideally suited for photon counting applications.

Features

- Light detection from 350 to 900 nm
- Ultra compact
- Very light weight
- Different SiPM sizes, 1x1, 3x3, 4x4 mm
- Voltage supply with low ripple
- Control software
- Setup board for voltage setting
- Non cooled, analog output
- Built-in SiPM optimized for NUV (420nm) or RGB (550nm) light detection
- Optional version with LYSO scintillation crystal

Applications

- Ultra-low-level light measurement
- Single photon counting
- Scientific applications
- Scintillator readout
- Gamma counting

Certificates

- RoHS compliant (2011/65/EU)

SiPM position

SiPM position depends on size of SiPM and is centred to board edges. Distance can vary due to manual processing.

Chip size	Width	Y (distance to edge)
1x1 mm	2.03 mm	typ. 10.98 mm
3x3 mm	3.48 mm	typ. 10.26 mm
4x4 mm	4.48 mm	typ. 9.76 mm

Specification notes

(2) Voltage which was set non-volatile will also be applied to the SiPM after reset/restart/power off of the module

Workflow

1. Download software from www.first-sensor.com
2. Module can run without software, basic setting with 5 V supply voltage. V_{br} is @ 50Ω (e.g. oscilloscope) 1 PE approx. 10 mV, V_{br} can be changed with the software
3. Install the software
4. Install driver
5. Settings for V_{br} are possible due to keyboard or the rotary bottom
6. If you want to set the value of V_{br} for the next start of the module you have to click on the "non volatile" button
