QTI Line Sensor (#550-27401)

Introduction

The Parallax QTI senor uses a QRD1114 infrared (IR) reflective sensor to determine the reflectivity of the surface below it. When the QTI sensor is over a dark surface, the reflectivity is very low; when the QTI is over a light surface, the reflectivity is very high and will cause a different reading from the sensor.

Features

- Phototransistor Output
- No contact surface sensing
- Unfocused for sensing diffused surfaces
- Compact Package
- Daylight filter on sensor

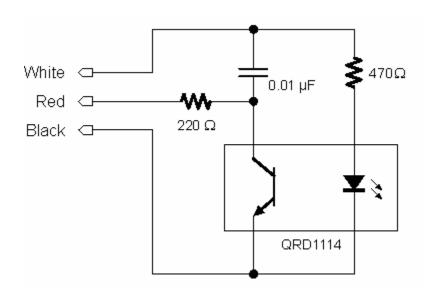

Specifications

ABSOLUTE MAXIMUM RATINGS (T _A =25c unless otherwise specified)			
Parameter	Symbol	Rating	Units
Operating Temperature	TOPR	-40 to +85	Celsius
Storage Temperature	T STG	-40 to +85	Celsius
Lead Temperature (Solder Iron)(2,3)	T SOL-I	240 for 5 sec	Celsius
Lead Temperature (Solder Flow) _(2,3)	T SOL-F	260 for 10 sec	Celsius
EMITTER Continuous Forward Current	F	50	mA
Reverse Voltage	\mathbf{V}_{R}	5	V
Power Dissipation (1)	P D	100	mW
SENSOR Collector-Emitter Voltage	V CEO	30	V
Emitter-Collector Voltage	VECO		V
Power Dissipation (1)	P D	100	mW

Kit Packing List

- 1. This manual
- 2. QTI sensor unit

Setting Up

Description

The QTI sensor is activated by placing 5 V (Vdd) on the W pin. This will cause current to flow through the 470 ohm resistor to the LED side of the QRD1114. IR light reflecting of the surface below will cause a change in the ability for the current to flow through the phototransistor side of the QRD1114. The transistor, in effect, behaves like an IR controlled resistance.
