Description

The 74FCT38072S is a low skew, single input to two output, clock buffer. The 74FCT38072S has best in class additive phase Jitter of sub 50 fsec.

Renesas makes many non-PLL and PLL based low skew output devices as well as Zero Delay Buffers to synchronize clocks. Contact us for all of your clocking needs.

Features

- Low additive phase jitter RMS: 50fs
- Extremely low skew outputs (50ps)
- Low cost clock buffer
- Packaged in 8-pin SOIC and 8-pin DFN, Pb-free
- Input/Output clock frequency up to 200 MHz
- Low power CMOS technology
- Operating voltages of 1.8V to 3.3V
- Extended temperature range (-40° to +105°C)

Pin Descriptions

Pin Number[1]	Pin Name	Pin Type	Pin Description
1	VDD	Power	Connect to +1.8V, +2.5 V, or +3.3 V.
2	VDD	Power	Connect to +1.8V, +2.5 V, or +3.3 V.
3	ICLK	Input	Clock input.
4	GND	Power	Connect to ground.
5	GND	Power	Connect to ground.
6	Q0	Output	Clock output 0.
7	Q1	Output	Clock output 1.
8	GND	Power	Connect to ground.

1.VDD on pin 1 and 2 is the same internal signal and must be connected to the same power rail on the PCB.

External Components

A minimum number of external components are required for proper operation. A decoupling capacitor of 0.01 µF should be connected between VDD pin and GND pin, as close to the device as possible. A 33 Ω series terminating resistor may be used on each clock output if the trace is longer than 1 inch.

To achieve the low output skew that the 74FCT38072S is capable of, careful attention must be paid to board layout. Essentially, both outputs must have identical terminations, identical loads and identical trace geometries. If they do not, the output skew will be degraded. For example, using a 30Ω series termination on one output (with 33Ω on the others) will cause at least 15 ps of skew.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the 74FCT38072S. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Notes:

1. "**" is the lot number.
2. "YYWW" or "YW" are the last digits of the year and week that the part was assembled.
3 "G" denotes RoHS compliant package.
4. "$" denotes the mark code.
5. "I" denotes extended temperature range device.
