

Dual-Channel, 14-Bit CCD Signal Processor with *Precision Timing* Core

AD9978

FEATURES

Dual AFE channels

1.8 V analog and digital core supply voltage

Serial data output with reduced range LVDS outputs

Differential analog inputs

CDS or SHA configuration (CDS bypass) with

-3 dB, 0 dB, +3 dB, and +6 dB gain

6 dB to 42 dB, 10-bit variable gain amplifier (VGA)

14-bit, 65 MHz analog-to-digital converter (ADC)

Black level clamp with variable level control

Precision Timing core with 240 ps resolution @ 65 MHz

APPLICATIONS

Digital video cameras
Digital still cameras
Digital copiers
Multifunction printers
High speed industrial cameras

GENERAL DESCRIPTION

The AD9978 is a highly integrated, dual-channel CCD signal processor for high speed digital video camera applications. Each channel is specified at pixel rates of up to 65 MHz and consists of a complete analog front end with ADC conversion. The *Precision Timing*™ core allows adjustment of the correlated double sampler (CDS) and sample-and-hold amplifier (SHA) clocks with 240 ps resolution at 65 MHz operation. The AD9978 also contains a reduced range, low voltage differential signaling (LVDS) interface for the dual-channel data outputs.

Each analog front end includes black level clamping, a CDS, a VGA, and a 65 MHz, 14-bit ADC. Operation is programmed using a 3-wire serial interface.

Packaged in a space-saving, 6 mm \times 6 mm, 40-lead LFCSP, the AD9978 is specified over an operating temperature range of -25° C to $+85^{\circ}$ C.
