

## Quad, High Voltage Amplifier Array Demo Board

### General Description

The Supertex HV264TS-G is a quad high voltage amplifier array device in a 24-pin TSSOP package. The HV264DB1 demo board provides a platform to evaluate this device. This demoboard requires only a minimum setup including a  $V_{DD}$  low voltage supply, a  $V_{PP}$  high voltage supply, and a signal source. The demoboard provides the input/output connections through two 6-pin headers.

For detailed electrical performance, please refer to the HV264 datasheet.

### Specifications

Parameter	Value
$V_{PP}$ high voltage supply	200V
$V_{DD}$ low voltage supply	4.5 to 5.5V
$HV_{OUT}$ output voltage swing	1.0V to $V_{PP} - 10V$
$V_{IN}$ Input signal range	0 to $V_{DD} - 1.5V$
$A_V$ closed loop gain	66.7V/V with internal feedback resistors
Typical SR output slew rate	9.0V/ $\mu$ s
$I_{PEAK}$ output peak current	3.0mA

### Board Layout

Pin Name	Description
VPP	High voltage positive supply
VDD	Low voltage positive supply
IN1 to IN4	Amplifier inputs
HVOUT1 to HVOUT4	Amplifier outputs
GND	Device ground

### Power Up/Down Sequence

The device can be damaged due to an improper power up / down sequence. To prevent damage, please follow the acceptable power up / down sequences. An external diode across VPP and VDD is included on the board, where the anode of the diode is connected to VDD and the cathode is connected to VPP. Any low current high voltage diode will be adequate.

### Acceptable Power Up Sequences

- 1)  $V_{DD}$  2)  $V_{PP}$  3) Inputs
- 1)  $V_{DD}$  2) Inputs 3)  $V_{PP}$

### Acceptable Power Down Sequences

- 1) Inputs, 2)  $V_{PP}$   $V_{DD}$
- 1)  $V_{PP}$  Inputs  $V_{DD}$

### Gain Setting

The HV264 quad amplifier array has the internal built-in gain setting resistors available with a fixed gain of 66.7V/V +/- 5%. External gain setting resistors can be used for applications that require better tolerance or a different closed loop gain. An example is shown in the following schematics. Fig. 1 shows the schematics of the demoboard. The external resistor values and tolerances can be selected to meet different gain setting and precision requirements as shown in Fig. 2.

## Schematics

Fig. 2. High Precision Gain Settings Using External Resistors

## Bill of Materials

Item	RefDes	Description	Package	Manufacturer	Part #
1	C1	0.1µF +/-10%, 25V X7R chip capacitor	0805	Any	---
2	C2	1.0nF +/-10%, 250V X7R chip capacitor	0805	Any	---
3	D1	400V, 1.0A, general purpose diode	SMA	Any	USIG
4	R1 ,R2, R3, R4, R9, R10, R11, R12	0Ω chip resistors	0805	Any	---
5	R5, R6, R7, R8	chip resistors (not installed)	0805	Any	---
6	U1	225V, 3.0mA amplifier array	24-pin TSSOP	Supertex	HV264TS-G
