

Product Overview

The AG203-63 is a general-purpose buffer amplifier that offers high dynamic range in a low-cost surface-mount package. At 900 MHz, the AD203-63 typically provides 20 dB gain, +20 dBm OPI3, and +8 dBm P1dB. The device combines dependable performance with consistent quality to maintain MTTF values exceeding 1000 years at mounting temperatures of +85 °C and is housed in a lead-free / green / RoHS-compliant SOT-363 industry standard SMT package.

The AG203-63 consists of a Darlington-pair amplifier using the high reliability InGap / GaAs HBT process technology and only requires DC-blocking capacitors, a bias resistor, and an inductive RF choke for operation.

The broadband AG203-63 MMIC amplifier can be directly applied to various current and next generation wireless technologies such as GPRS, GSM, CDMA, and WCDMA. In addition, the AG203-63 will work for other various applications from DC to 6 GHz frequency range such as CATV and WiMAX.

PCB Mounting Land Pattern

Notes:

1. Ground / thermal via holes are critical for the proper performance of this device. Via holes should use a 0.35 mm (#80 / .0135") diameter drill and have a final plated thru diameter of 0.25 mm (0.010").
2. Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.
3. Mounting screws can be added near the part to fasten the board to a heatsink. Ensure that the ground / thermal via region contacts the heatsink.
4. No solder mask on the backside of the PC board in the region where the board contacts the heatsink.
5. RF trace width depends upon the PC board material and construction.
6. Use 1 oz. Copper minimum.
7. All dimensions are in millimeters (inches). Angles are in degrees.
