

Duplexor

DIMENSIONS (INCHES)

WIRING

The **Duplexor** is used in control panels where **two loads** are required to alternate to provide equal run time on the loads. The alternating action is initiated by a control switch, which is common with one side of the control voltage. The output contacts will change states each time the control switch is opened, thus alternating the two loads. The LED indicators show the position of the output relay.

The **ARA Series** is the standard **Duplexor** providing automatic alternating sequence. The **ARB** has the automatic sequencing feature plus the option of locking it into one sequence. A three position switch permits the field selection of normal duplexing action, locking in the A-B sequence, or B-A sequence.

SPECIFICATIONS

CONTROL VOLTAGE	24, 120 VAC/DC, 208, 240, 50/60Hz,
CONTROL SWITCH CURRENT	1 mA
POWER REQUIRED	3 VA (Approximately)
DUTY CYCLE	Continuous
LIFE EXPECTANCY	Mechanical 10,000,000 Operations (Minimum) Electrical 100,000 Operations @ Rated Load
INDICATORS	LED Shows Output Position
TEMPERATURES RATING	Operate -4° to 131°F (-20° to +55°C) Storage -40° to 185°F (-40° to +85°C)
CONTACT RATING	10 Amps @ 240 VAC, Resistive 1/8 hp @ 120 VAC 1/4 hp @ 240 VAC Inductive, 360 VA @ 240 VAC, Inductive
ENCLOSURE	"A" Lexan® Dust Cover
TERMINATIONS	Industrial Plug-in
WEIGHT	4.5 oz.

ALTERNATING RELAYS

ATC-Diversified Electronics offers a wide variety of models for various staging requirements. The different models available are: **Duplexors, Triplexors, Quadraplexors, Special Function, and Expandable Alternating Relays.**

The **Alternating Relay** is used in multiple load installations to assure equal run time on all loads. They also allow for the addition of more capacity in the event of excess load requirements. The Alternating Relay provides equal run time on two or more loads by alternating the sequence in which the loads are allowed to start up. In each case, the alternating action is initiated each time the control switch across designated terminal opens. The control switch may be a float, a thermostat, a pressure switch, or a timer contact.

ALTERNATING CONTROLLERS

The **ARM Series, Alternating Controllers**, are used in multiple load installations to assure equal run time on all loads. They also allow for the addition of more capacity in the event of excess load requirements. The Alternating Controllers provide equal run time on two or more loads by alternating the sequence in which the loads are allowed to start up.

All **ARM** models feature **intrinsically safe inputs** and logic that allows the outputs to operate even if one of the inputs fails to open or close. For example: if the off switch fails to close, the lead load will not energize until both the lead and the lag switches close. An inrush delay on all models reduces line sags by preventing multiple loads from energizing simultaneously.
