

3.3 V 128K × 16 CMOS SRAM

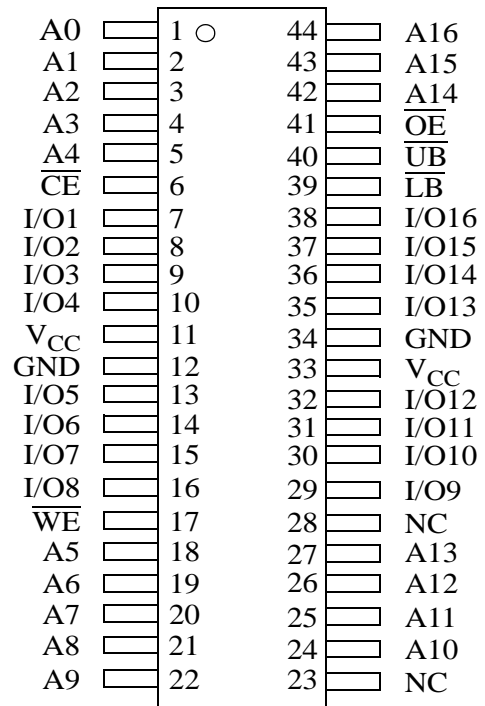

Features

- Industrial and commercial temperature
- Organization: 131,072 words × 16 bits
- Center power and ground pins
- High speed
 - 10/12/15/20 ns address access time
 - 4/5/6/7 ns output enable access time
- Low power consumption: ACTIVE
 - 650 mW /max @ 10 ns
- Low power consumption: STANDBY
 - 28.8 mW /max CMOS
- Individual byte read/write controls
- Easy memory expansion with \overline{CE} , \overline{OE} inputs
- TTL- and CMOS-compatible, three-state I/O
- 44-pin JEDEC standard packages
 - TSOP 2
- ESD protection ≥ 2000 volts
- Latch-up current ≥ 200 mA

Selection guide

| | | -10 | -12 | -15 | -20 | Unit |
|-----------------------------------|------------|-----|-----|-----|-----|------|
| Maximum address access time | | 10 | 12 | 15 | 20 | ns |
| Maximum output enable access time | | 4 | 5 | 6 | 7 | ns |
| Maximum operating current | Industrial | 180 | 160 | 140 | 110 | mA |
| | Commercial | 170 | 150 | 130 | 100 | mA |
| Maximum CMOS standby current | | 8 | 8 | 8 | 8 | mA |

Functional description

The AS7C32098A is a high-performance CMOS 2,097,152-bit Static Random Access Memory (SRAM) device organized as 131,072 words \times 16 bits. It is designed for memory applications where fast data access, low power, and simple interfacing are desired.

Equal address access and cycle times (t_{AA} , t_{RC} , t_{WC}) of 10/12/15/20 ns with output enable access times (t_{OE}) of 4/5/6/7 ns are ideal for high-performance applications. The chip enable input \overline{CE} permits easy memory expansion with multiple-bank memory systems.

When \overline{CE} is high the device enters standby mode. The device is guaranteed not to exceed 28.8mW power consumption in CMOS standby mode. A write cycle is accomplished by asserting write enable (\overline{WE}) and chip enable (\overline{CE}). Data on the input pins I/O1–I/O16 is written on the rising edge of \overline{WE} (write cycle 1) or \overline{CE} (write cycle 2). To avoid bus contention, external devices should drive I/O pins only after outputs have been disabled with output enable (\overline{OE}) or write enable (\overline{WE}).

A read cycle is accomplished by asserting output enable (\overline{OE}) and chip enable (\overline{CE}), with write enable (\overline{WE}) high. The chip drives I/O pins with the data word referenced by the input address. When either chip enable or output enable is inactive, or write enable is active, output drivers stay in high-impedance mode.

The device provides multiple center power and ground pins, and separate byte enable controls, allowing individual bytes to be written and read. \overline{LB} controls the lower bits, I/O1–I/O8, and \overline{UB} controls the higher bits, I/O9–I/O16.

All chip inputs and outputs are TTL- and CMOS-compatible, and operation is for 3.3V (AS7C32098A) supply. The device is available in the JEDEC standard TSOP 2 package.

Absolute maximum ratings

| Parameter | Symbol | Min | Max | Unit |
|-------------------------------------------|------------|-------|-----------------|-------------|
| Voltage on V_{CC} relative to GND | V_{t1} | -0.50 | +5.0 | V |
| Voltage on any pin relative to GND | V_{t2} | -0.50 | $V_{CC} + 0.50$ | V |
| Power dissipation | P_D | – | 1.5 | W |
| Storage temperature (plastic) | T_{stg} | -65 | +150 | $^{\circ}C$ |
| Ambient temperature with V_{CC} applied | T_{bias} | -55 | +125 | $^{\circ}C$ |
| DC current into outputs (low) | I_{OUT} | – | ± 20 | mA |

Note: Stresses greater than those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions outside those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Truth table

| \overline{CE} | \overline{WE} | \overline{OE} | \overline{LB} | \overline{UB} | I/O1–I/O8 | I/O9–I/O16 | Mode |
|-----------------|-----------------|-----------------|-----------------|-----------------|-----------|------------|----------------------------------|
| H | X | X | X | X | High Z | High Z | Standby (I_{SB} , I_{SB1}) |
| L | H | H | X | X | High Z | High Z | Output disable (I_{CC}) |
| L | X | X | H | H | | | |
| L | H | L | L | H | D_{OUT} | High Z | Read (I_{CC}) |
| | | | H | L | High Z | D_{OUT} | |
| | | | L | L | D_{OUT} | D_{OUT} | |
| L | L | X | L | H | D_{IN} | High Z | Write (I_{CC}) |
| | | | H | L | High Z | D_{IN} | |
| | | | L | L | D_{IN} | D_{IN} | |

Key: X = Don't care, L = Low, H = High.

Recommended operating conditions

| Parameter | Symbol | Min | Typical | Max | Unit | |
|-------------------------------|------------------------|-------|---------|----------------|------|----|
| Supply voltage | V_{CC} (10/12/15/20) | 3.0 | 3.3 | 3.6 | V | |
| Input voltage | V_{IH}^{**} | 2.0 | – | $V_{CC} + 0.5$ | V | |
| | V_{IL}^* | –0.5 | – | 0.8 | V | |
| Ambient operating temperature | commercial | T_A | 0 | – | 70 | °C |
| | industrial | T_A | –40 | – | 85 | °C |

* V_{IL} min = –1.0V for pulse width less than 5ns.

** V_{IH} max = $V_{CC} + 2.0V$ for pulse width less than 5ns.

DC operating characteristics (over the operating range)¹

| Parameter | Symbol | Test conditions | –10 | | –12 | | –15 | | –20 | | Unit | |
|--------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------|------------|-----|-----|-----|-----|-----|-----|-----|------|----|

Write waveform 3⁹

AC test conditions

- Output load: see Figure B.
- Input pulse level: GND to 3.0V. See Figure A.
- Input rise and fall times: 2 ns. See Figure A.
- Input and output timing reference levels: 1.5V.

Figure A: Input pulse

Figure B: 3.3V Output load

Thevenin equivalent: $D_{OUT} \rightarrow 168\Omega \rightarrow +1.728V$

Notes

- 1 During V_{CC} power-up, a pull-up resistor to V_{CC} on \overline{CE} is required to meet I_{SB} specification.
- 2 For test conditions, see *AC Test Conditions*, Figures A and B.
- 3 t_{CLZ} and t_{CHZ} are specified with $C_L = 5pF$ as in Figure B. Transition is measured $\pm 500mV$ from steady-state voltage.
- 4 This parameter is guaranteed, but not tested.
- 5 \overline{WE} is High for read cycle.
- 6 \overline{CE} and \overline{OE} are Low for read cycle.
- 7 Address valid prior to or coincident with \overline{CE} transition Low.
- 8 All read cycle timings are referenced from the last valid address to the first transitioning address.
- 9 All write cycle timings are referenced from the last valid address to the first transitioning address.
- 10 $C = 30pF$, except on High Z and Low Z parameters, where $C = 5pF$.

Package dimensions

| | 44-pin TSOP 2 | |
|----------------------|----------------|----------|
| | Min (mm) | Max (mm) |
| A | | 1.2 |
| A₁ | 0.05 | 0.15 |
