Setting Up the AT91SAM9G10-EK Evaluation Board

2.1 Electrostatic Warning

The AT91SAM9G10-EK evaluation board is shipped in a protective anti-static package. The board must not be subjected to high electrostatic potentials. In risky ESD environments (e.g. offices with carpet) a grounding strap or similar protective device should be worn when handling the board. Also, generally avoid touching the component pins or any other metallic element of the board.

2.2 Requirements

In order to set up the AT91SAM9G10-EK evaluation board, the following items are required:

- the AT91SAM9G10-EK evaluation board itself
- AC/DC power adapter (5V at 2A), 2.1 mm by 5.5 mm

2.3 Layout

Figure 2-1. AT91SAM9G10-EK Layout - Top View

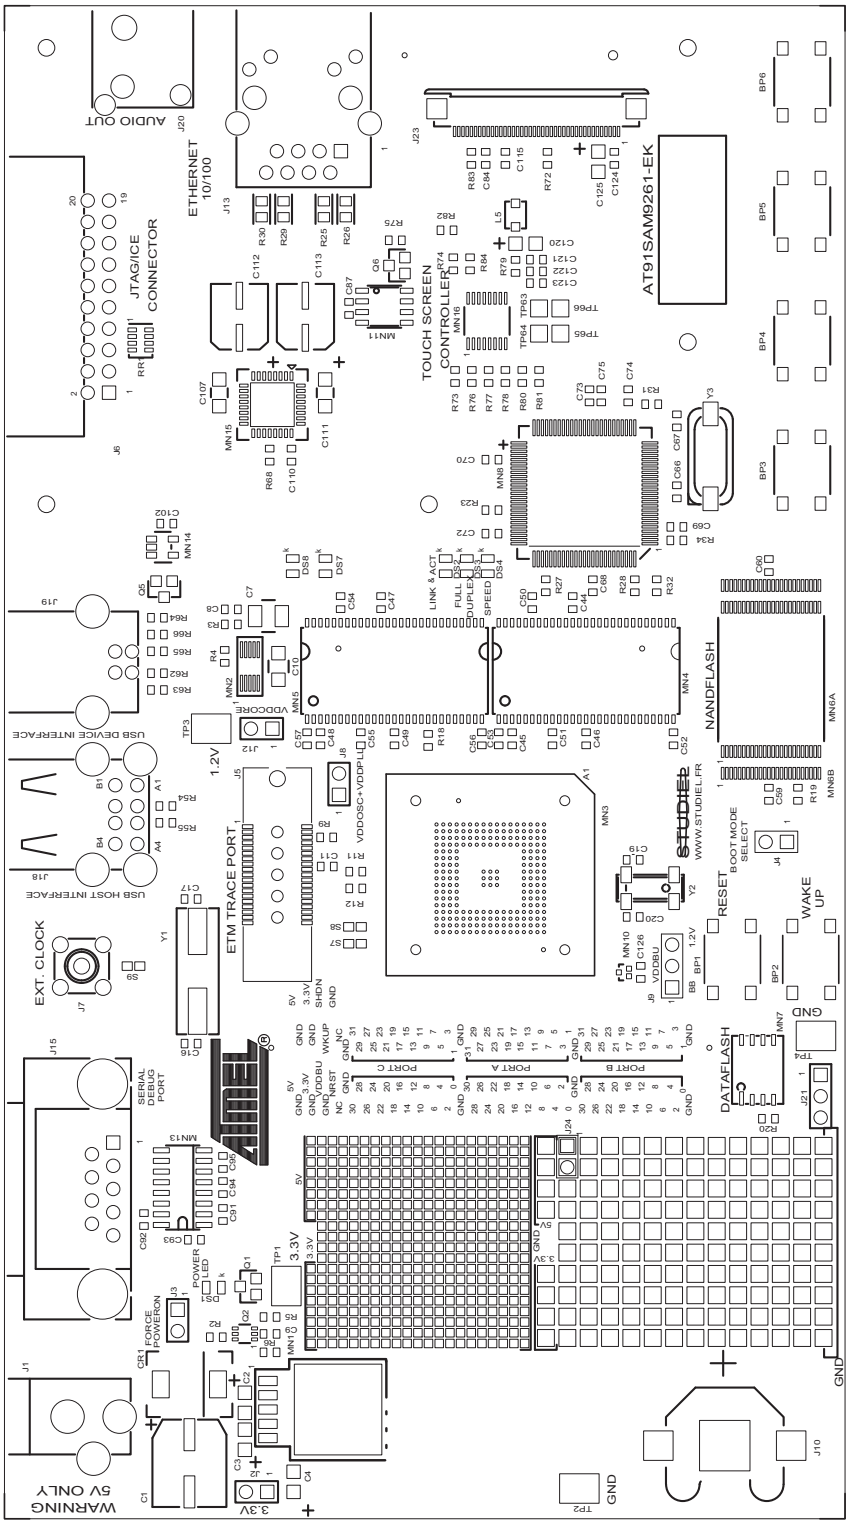

Figure 2-2. AT91SAM9G10-EK Layout - Bottom View

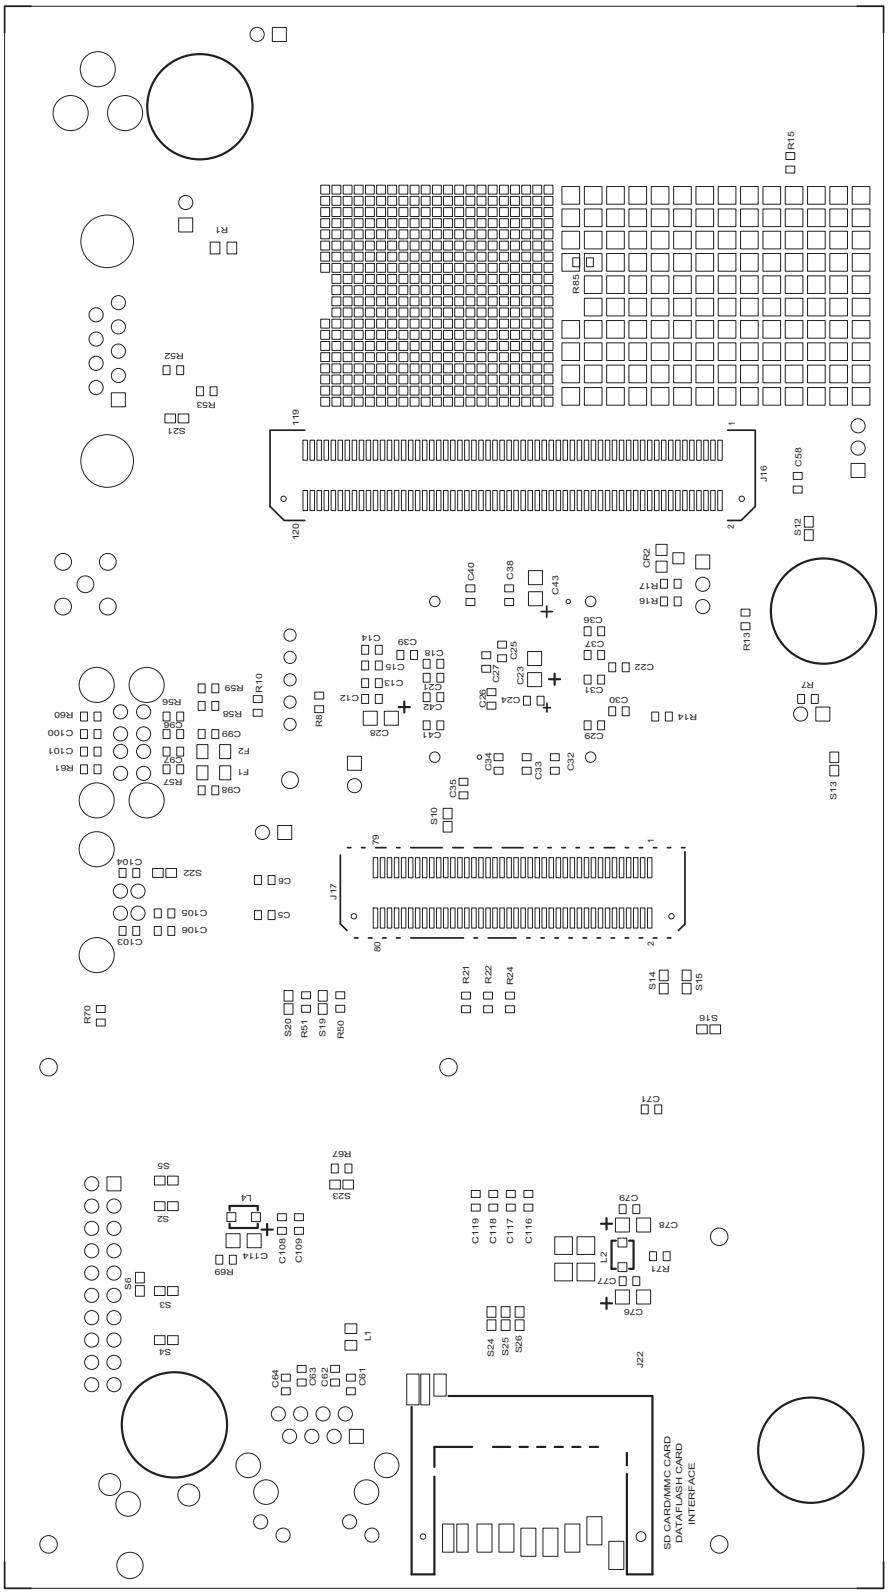

2.4 Powering Up the Board

AT91SAM9G10-EK requires 5V DC (±5%). DC power is supplied to the board via the 2.1 mm by 5.5 mm socket (J1). The coaxial power plug center pin is positive polarity.

2.5 Backup Power Supply

The user has the possibility to add a battery (3V Lithium Battery CR1225 or equivalent) in order to permanently power the backup part of the device. In this case, J9 configuration must to be set in position 1, 2.

Refer to Table 4-1, “Configuration Jumpers and Straps”.

2.6 Getting Started

The AT91SAM9G10-EK evaluation board is delivered with an embedded demo and documentation files allowing the user to begin evaluating the AT91 ARM Thumb 32-bit microcontroller quickly. Simply power the board and connect it to the USB port of your PC to open it. Also, please refer to the AT91 web site, www.atmel.com/products/AT91/, for the most up-to-date information on getting started with the AT91SAM9G10-EK.

Errata

6.1 JTAGSEL S5 Footprint Selector

For JTAG selection, the S5 footprint must never be soldered, otherwise the chip can be damaged.

By default, the JTAGSEL input pin integrates a pull-down resistor (ICE mode).

To select JTAG mode, the designer should connect the JTAGSEL input pin to VDDBU power.

6.2 External Capacitor Values on XIN and XOUT

The external capacitor values on XIN and XOUT are not correct.

The 10 pF capacitors must be replaced by 22 pF capacitors.

Please refer to the electrical parameters section of the datasheet.
