

BAR64-06

Low signal distortion, surface mount RF PIN diode, common anode pair

Product description

This Infineon cost optimized RF PIN diode is designed for low distortion switches that require to hold off large RF voltages, and is best suited for frequencies as high as 3 GHz. Its nominal 50 μm I-region width, combined with the typical 1.55 μs carrier lifetime, result in a diode with low forward resistance and low distortion characteristics.

Feature list

- Low signal distortion, charge carrier lifetime $t_{rr} = 1.55 \mu\text{s}$ (typical)
- Very low capacitance $C = 0.22 \text{ pF}$ (typical) at voltage $V_R = 0$ and frequencies $f \geq 1 \text{ GHz}$
- Low forward resistance $R_F = 2.3 \Omega$ (typical) at forward current $I_F = 10 \text{ mA}$ and frequency $f = 100 \text{ MHz}$
- Industry standard SOT23-3 package (2.9 mm x 2.4 mm x 1 mm)
- Pb-free, RoHS compliant and halogen-free

Product validation

Qualified for industrial applications according to the relevant tests of JEDEC47/20/22.

Potential applications

Optimized for low bias current RF and high-speed interface switches and attenuators

- Wireless communication
- High speed data networks

1 Absolute maximum ratings

Table 2 Absolute maximum ratings at $T_A = 25\text{ }^\circ\text{C}$, unless otherwise specified

Parameter	Symbol	Values		Unit	Note or test condition
		Min.	Max.		
Diode reverse voltage	V_R	-	150	V	
Forward current	I_F	-	100	mA	
Total power dissipation	P_{TOT}	-	250	mW	$T_S \leq 126\text{ }^\circ\text{C}$ ¹⁾
Junction temperature	T_J	-	150	$^\circ\text{C}$	
Operating temperature	T_{OP}	-55	125		
Storage temperature	T_{STG}	-55	150		

Attention: Stresses above the maximum values listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Exceeding only one of these values may cause irreversible damage to the component.

¹ T_S is the soldering point temperature.

Electrical performance in test fixture
