

BCR430U

Low Voltage Drop LED Driver IC

Feature list

- Supply voltage from 6 V to 42 V
- Controls up to 100 mA LED current
- Typ. 135 mV saturation voltage at 50 mA
- LED current precision $\pm 5\%$ at 95 mA
- Smart over temperature protection function

Advantages with respect to discrete solutions

- Low BOM count
- Lower assembly cost
- Smaller form factor
- Higher reliability due to less parts and soldering joints

Potential Applications

- LED strips
- LED displays and channel letters
- Architectural and landscape lighting
- Retail lighting

Product Validation

- Qualified for industrial applications according to the relevant tests of JEDEC47/20/22

Description

BCR430U is a linear LED driver IC in a small PG-SOT23-6 package regulating the LED current in standalone operation without any external power transistor. The IC supply voltage range is from 6 V up to 42 V. The LED current level can be adjusted up to 100 mA connecting a high ohmic resistor R_{set} to pin RS. The maximum voltage drop at the integrated LED driver stage is 200 mV at 50 mA improving the overall system efficiency and providing extra voltage headroom to compensate for tolerances of LED forward voltage or supply voltage. The smart over temperature protection function reduces the LED current when junction temperature of BCR430U is very high.

LED current configuration

The LED current is configured by the external resistor R_{set} at pin RS. The current flowing into pin LED is proportional to the current flowing out of pin RS by a ratio of about 520:1. Therefore, the LED current depends on the value of R_{set} .

Functional description

Smart over temperature protection function

BCR430U reduces the LED current with increasing junction temperature by reducing the voltage at pin RS. The reduced voltage of pin RS drives less current through the external resistor Rset, causing the current into pin LED to reduce. The LED current is never turned off fully.

Maximum Permitted Power Dissipation

To avoid damage of the IC the power dissipation of BCR430U must be reduced with increasing ambient temperature according to [Figure 5](#).

Attention: Stresses above the max. values listed here may cause permanent damage to the device.
 Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
 Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit.
