Spec.No.JENF243A-9127F-01

P.1/8

Chip Ferrite Bead BLM03H□□□□Z1D

Murata Standard Reference Specification [AEC-Q200]

1.Scope

This reference specification applies to Chip Ferrite Bead for Automotive Electronics BLM03H_Z series based on AEC-Q200 except for Power train and Safety.

2.Part Numbering

(ex.) $\frac{BL}{(1)}$ $\frac{M}{(2)}$ $\frac{03}{(3)}$ $\frac{HG}{(4)}$ $\frac{601}{(5)}$ $\frac{S}{(6)}$ $\frac{Z}{(7)}$ $\frac{1}{(8)}$ $\frac{D}{(9)}$

(1)Product ID (2)Type (3)Dimension (L×W) (4)Characteristics (5)Typical Impedance at 100MHz (6)Performance(S:general/F:Low Rdc) (7)Category(for Automotive Electronics) (8)Numbers of Circuit (9)Packaging (D:Taping)

3.Rating

Customer Part Number	MURATA Part Number	Impedance (Ω) (Under Standard Testing Condition)		Rated Current (mA)	DC Resistance (Ω max.) (refer to below comment)		ESD Rank 2 :2kV
		at100MHz	at1GHz		Initial Values	Values After Testing	
	BLM03HG601SZ1D	600±25%	1000±40%	150	1.6	1.7	2
	BLM03HG102SZ1D	1000±25%	1800±40%	125	2.6	2.7	
	BLM03HG122SZ1D	1200±25%	2000±40%	100	3.5	3.6	
	BLM03HB191SZ1D	190±25%	1150±40%	150	2.0	2.1	
	BLM03HB401SZ1D	400±25%	1850±40%	125	2.8	2.9	
	BLM03HD331SZ1D	330±25%	750±40%	200	1.0	1.1	
	BLM03HD471SZ1D	470±25%	1000±40%	175	1.3	1.4	
	BLM03HD601SZ1D	600±25%	1500±40%	150	1.7	1.8	
	BLM03HD102SZ1D	1000±25%	2300±40%	120	2.9	3.0	
	BLM03HD102FZ1D	1000±25%	2300±40%	135	2.4	2.5	
	BLM03HD152FZ1D	1500±25%	2700±40%	120	3.1	3.2	
	BLM03HD182FZ1D	1800±25%	3000±40%	100	3.8	3.9	

■ Operating Temperature : -55°C to +125°C ■ Storage Temperature : -55°C to +125°C

Standard Testing Conditions

< Unless otherwise specified >

Temperature : Ordinary Temp. (15 °C to 35 °C)
Humidity : Ordinary Humidity (25%(RH) to 85%(RH))

< In case of doubt >

Temperature : 20°C±2 °C
Humidity : 60%(RH) to 70%(RH)
Atmospheric pressure : 86kPa to 106kPa

4.Style and Dimensions

: Electrode

■ Equivalent Circuit

(Resistance element becomes dominant at high frequencies.)

■ Unit Weight (Typical value)
0.3mg

Reference Only

5. Marking

No marking.

6. Specifications

6-1. Electrical Performance

No.	Item	Specification	Test Method
6-1-1	Impedance	Meet item 3.	Measuring Frequency : 100MHz±1MHz, 1GHz±1MHz Measuring Equipment : KEYSIGHT4291A or the equivalent Test Fixture : KEYSIGHT16192A or the equivalent
6-1-2	DC Resistance	Meet item 3.	Measuring Equipment : Digital multi meter *Except resistance of the Substrate and Wire

6-2. Mechanical Performance (based on Table 13 for FILTER EMI SUPPRESSORS/FILTERS)

AEC-Q200 Rev.D issued June. 1 2010

AEC-Q200			Murata Specification / Deviation						
No.	Stress	Test Method							
3	High Temperature Exposure	1000hours at 125 deg C Set for 24hours at room temperature, then measured.	Meet Table A after testing. <u>Table A</u> <table border="1" style="margin-left: 20px;"> <tr> <td>Appearance</td> <td>No damage</td> </tr> <tr> <td>Impedance Change (at 100MHz)</td> <td>Within ±30%</td> </tr> <tr> <td>DC Resistance</td> <td>Meet item 3.</td> </tr> </table>	Appearance	No damage	Impedance Change (at 100MHz)	Within ±30%	DC Resistance	Meet item 3.
Appearance	No damage								
Impedance Change (at 100MHz)	Within ±30%								
DC Resistance	Meet item 3.								
4	Temperature Cycling	1000cycles -55 deg C to +125 deg C Set for 24hours at room temperature, then measured.	Meet Table A after testing.						
5	Destructive Physical Analysis	Per EIA469 No electrical tests	No defects						
7	Biased Humidity	1000hours at 85 deg C, 85%RH Apply max rated current.	Meet Table A after testing.						
8	Operational Life	Apply 125 deg C 1000hours Set for 24hours at room temperature, then measured	Meet Table A after testing.						
9	External Visual	Visual inspection	No abnormalities						
10	Physical Dimension	Meet ITEM 4 (Style and Dimensions)	No defects						
12	Resistance to Solvents	Per MIL-STD-202 Method 215	Not Applicable						
13	Mechanical Shock	Per MIL-STD-202 Method 213 Condition F: 1500g's(14.7N)/0.5ms/Half sine	Meet Table A after testing.						
14	Vibration	5g's(0.049N) for 20 minutes 12cycles each of 3 orientations Test from 10-2000Hz.	Meet Table A after testing.						
15	Resistance to Soldering Heat	Solder temperature 260C+/-5 deg C Immersion time 10s	Pre-heating: 150C +/-10 deg C, 60s to 90s Meet Table A after testing.						

Reference Only

AEC-Q200			Murata Specification / Deviation
No.	Stress	Test Method	
17	ESD	Per AEC-Q200-002	Meet Table A after testing. ESD Rank: Meet Item 3. (Rating)
18	Solderability	Per J-STD-002	Method b : Not Applicable 95% of the terminations is to be soldered.
19	Electrical Characterization	Measured : Impedance	No defects
20	Flammability	Per UL-94	Not Applicable
21	Board Flex	Epoxy-PCB(1.6mm) Deflection 2mm(min) 60s minimum holding time	Murata deviation request: Epoxy-PCB(0.8mm) Deflection 1mm(min) for BLM03H_FZ Meet Table A after testing.
22	Terminal Strength	Per AEC-Q200-006	Murata deviation request: 5N No defects
30	Electrical Transient Conduction	Per ISO-7637-2	Not Applicable

7.Specification of Packaging

7-1.Appearance and Dimensions (8mm-wide paper tape)

(1) Taping

Products shall be packaged in the cavity of the base tape of 8mm-wide, 2mm-pitch continuously and sealed by top tape and bottom tape.

(2) Sprocket hole: The sprocket holes are to the right as the tape is pulled toward the user.

(3) Spliced point: The base tape and top tape have no spliced point

(4) Cavity: There shall not be burr in the cavity.

(5) Missing components number

Missing components number within 0.025% of the number per reel or 1 pc., whichever is greater, and are not continuous. The specified quantity per reel is kept..

7-2.Tape Strength

(1) Pull Strength

Cover tape	5N min.
------------	---------

(2) Peeling off force of Cover tape

0.1N to 0.6N (Minimum value is typical.)

*Speed of Peeling off: 300mm/min

Reference Only

7-3.Taping Condition

(1)Standard quantity per reel

Quantity per 180mm reel	10000 pcs. / reel
-------------------------	-------------------

(2)There shall be leader-tape(top tape and empty tape) and trailer- tape(empty tape) as follows.

(3)On paper tape, the top tape and the base tape shall not be adhered at the tip of the empty leader tape for more than 5 pitch.

(4)Marking for reel

The following items shall be marked on a label and the label is stuck on the reel.

(Customer part number, MURATA part number, Inspection number(*1) , RoHS marking(*2) , Quantity, etc)

*1) « Expression of Inspection No. » $\frac{\square\square}{(1)}$ $\frac{0000}{(2)}$ $\frac{\times\times\times}{(3)}$

(1) Factory Code

(2) Date

First digit : Year / Last digit of year

Second digit : Month / Jan. to Sep. → 1 to 9, Oct. to Dec. → O,N,D

Third, Fourth digit : Day

(3) Serial No.

*2) « Expression of RoHS marking » ROHS – Y (Δ)
(1) (2)

(1) RoHS regulation conformity parts.

(2) MURATA classification number

(5)Outside package

These reels shall be packed in the corrugated cardboard package and the following items shall be marked on a label and the label is stuck on the box.

(Customer name, Purchasing order number, Customer part number, MURATA part number, RoHS marking(*2) ,Quantity, etc)

(6)Dimensions of reel and taping(leader-tape, trailer-tape)

7-4. Specification of Outer Case

Outer Case Dimensions (mm)			Standard Reel Quantity in Outer Case (Reel)
W	D	H	
186	186	93	5

* Above Outer Case size is typical. It is depend on a quantity of an order.

8. ⚠ Caution

8-1.Rating

Do not use products beyond the Operating Temperature Range and Rated Current.

8-2.Surge current

Excessive surge current (pulse current or rush current) than specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise.

Please contact us in advance in case of applying the surge current.

8-3.Fail Safe

Be sure to provide an appropriate fail-safe function on your product to prevent from a second damage that may be caused by the abnormal function or the failure of our products.

8-4.Limitation of Applications

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

- | | |
|----------------------------------|---|
| (1)Aircraft equipment | (6)Disaster prevention / crime prevention equipment |
| (2)Aerospace equipment | (7)Traffic signal equipment |
| (3)Undersea equipment | (8)Transportation equipment (trains, ships, etc.) |
| (4)Power plant control equipment | (9) Data-processing equipment |
| (5)Medical equipment | (10)Applications of similar complexity and /or reliability requirements to the applications listed in the above |

8-5. Corrosive gas

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

9. Notice

This product is designed for solder mounting.

Please consult us in advance for applying other mounting method such as conductive adhesive.

9-1.Land pattern designing

- Standard land dimensions (Reflow soldering)

a	b	c
0.25	0.80	0.30

(in mm)

9-2.Soldering Conditions

Products can be applied to reflow soldering.

- (1) Flux,Solder

Flux	Use rosin-based flux, but not highly acidic flux (with chlorine content exceeding 0.2(wt)% .) Do not use water-soluble flux.
Solder	Use Sn-3.0Ag-0.5Cu solder Standard thickness of solder paste : 100 μm to 150 μm

- (2) Soldering conditions

- Pre-heating should be in such a way that the temperature difference between solder and ferrite surface is limited to 150°C max. Also cooling into solvent after soldering should be in such a way that the temperature difference is limited to 100°C max.

Insufficient pre-heating may cause cracks on the ferrite, resulting in the deterioration of product quality.

- Standard soldering profile and the limit soldering profile is as follows.

The excessive limit soldering conditions may cause leaching of the electrode and / or resulting in the deterioration of product quality.

(3) Soldering profile

	Standard Profile	Limit Profile
Pre-heating	150~180°C、90s±30s	
Heating	above 220°C、30s~60s	above 230°C、60s max.
Peak temperature	245±3°C	260°C,10s
Cycle of reflow	2 times	2 times

9-3. Soldering iron

- Pre-heating: 150°C, 1 min
- Tip temperature: 350°C max.
- Soldering time : 3(+1,-0) seconds.
- Soldering iron output: 80W max.
- Tip diameter: φ 3mm max.
- Times : 2times max.

Note :Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the ferrite material due to the thermal shock.

9-4.Solder Volume

Solder shall be used not to be exceeded as shown below.

$$1/3T \leq t \leq T$$

(T:Chip thickness)

Accordingly increasing the solder volume, the mechanical stress to product is also increased. Exceeding solder volume may cause the failure of mechanical or electrical performance.

9-5.Attention regarding P.C.B. bending

The following shall be considered when designing and laying out P.C.B.'s.

- (1) P.C.B. shall be designed so that products are not subject to the mechanical stress for board warpage.

<Products direction>

Products shall be located in the sideways direction (Length:a<b) to the mechanical stress.

(2) Components location on P.C.B. separation.

It is effective to implement the following measures, to reduce stress in separating the board.
It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

Contents of Measures	Stress Level
(1) Turn the mounting direction of the component parallel to the board separation surface.	A > D *1
(2) Add slits in the board separation part.	A > B
(3) Keep the mounting position of the component away from the board separation surface.	A > C

*1 A > D is valid when stress is added vertically to the perforation as with Hand Separation.
If a Cutting Disc is used, stress will be diagonal to the PCB, therefore A > D is invalid.

(3) Mounting Components Near Screw Holes

When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.

9-6. Mounting density

Add special attention to radiating heat of products when mounting the inductor near the products with heating.
The excessive heat by other products may cause deterioration at joint of this product with substrate.

9-7. Operating Environment

Do not use this product under the following environmental conditions, on deterioration of the Insulation Resistance of the Ferrite material and/or corrosion of Inner Electrode may result from the use.

- (1) in the corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases and etc. (the sea breeze, Cl₂, H₂S, NH₃, SO₂, NO₂, etc)
- (2) in the atmosphere where liquid such as organic solvent, may splash on the products.
- (3) in the atmosphere where the temperature / humidity changes rapidly and it is easy to dew.

9-8. Resin coating

The impedance value may change and/or it may affect on the product's performance due to high cure-stress of resin to be used for coating / molding products. So please pay your careful attention when you select resin.
In prior to use, please make the reliability evaluation with the product mounted in your application set.
