BM61M41RFV-C Evaluation Board
BM61M41RFV-EVK002

User's Guide

<High Voltage Safety Precautions>

◇ Read all safety precautions before use

Please note that this document covers only the BM61M41RFV-C evaluation board (BM61M41RFV-EVK002) and its functions. For additional information, please refer to the datasheet.

To ensure safe operation, please carefully read all precautions before handling the evaluation board

Depending on the configuration of the board and voltages used,

Potentially lethal voltages may be generated.

Therefore, please make sure to read and observe all safety precautions described in the red box below.

Before Use

- [1] Verify that the parts/components are not damaged or missing (i.e. due to the drops).
- [2] Check that there are no conductive foreign objects on the board.
- [3] Be careful when performing soldering on the module and/or evaluation board to ensure that solder splash does not occur.
- [4] Check that there is no condensation or water droplets on the circuit board.

During Use

- [5] Be careful to not allow conductive objects to come into contact with the board.
- [6] **Brief accidental contact or even bringing your hand close to the board may result in discharge and lead to severe injury or death.**

Therefore, DO NOT touch the board with your bare hands or bring them too close to the board. In addition, as mentioned above please exercise extreme caution when using conductive tools such as tweezers and screwdrivers.

- [7] If used under conditions beyond its rated voltage, it may cause defects such as short-circuit or, depending on the circumstances, explosion or other permanent damages.
- [8] Be sure to wear insulated gloves when handling is required during operation.

After Use

- [9] The ROHM Evaluation Board contains the circuits which store the high voltage. Since it stores the charges even after the connected power circuits are cut, please discharge the electricity after using it, and please deal with it after confirming such electric discharge.
- [10] Protect against electric shocks by wearing insulated gloves when handling.

This evaluation board is intended for use only in research and development facilities and should be handled **only by qualified personnel familiar with all safety and operating procedures.**

We recommend carrying out operation in a safe environment that includes the use of high voltage signage at all entrances, safety interlocks, and protective glasses.

Isolated Gate Driver

BM61M41RFV-C Evaluation Board

BM61M41RFV-EVK002

The BM61M41RFV-EVK002 board can be driving two MOSFET Power Devices such as for High-side and Low-side on Half-Bridge application. The Input-side power supply voltage is from 4.5 to 5.5 V. The output-side power supply is from 9 to 24 V. The BM61M41RFV-C has Power Supply protections which are the Under-Voltage Lockout (UVLO) function at Input-side and Output-side. The Active Miller Clamping is included for gate control. The BM61M41RFV-EVK002 allows designers to evaluate Rohm's Gate Driver family for various applications.

Application

MOSFET Gate Drive

Electric Characteristics

Features and electric characteristics are complied with BM61M41RFV-C. The BM61M41RFV-C datasheet can be referenced to help facilitate designs.

Operating Range

Parameter	Symbol	Min	Max	Units
Input-side Supply Voltage	VCC1 ^(Note 1)	4.5	5.5	V
Output-side Supply Voltage	VCC2 ^(Note 2)	9	24	V
Operating Temperature	Topr	-40	+125	°C

(Note 1): Relative to GND1

(Note 2): Relative to GND2

Absolute Maximum Ratings

Parameter	Symbol	Limits	Units
Input-side Supply Voltage	VCC1	-0.3 to +7.0 ^(Note 3)	V
Output-side Supply Voltage	VCC2	-0.3 to +30.0 ^(Note 4)	V
INA Pin Input Voltage	V _{INA}	-0.3 to +VCC1+0.3 or +7.0 ^(Note 3)	V
INB Pin Input Voltage	V _{INB}	-0.3 to +VCC1+0.3 or +7.0 ^(Note 3)	V

(Note 3): Relative to GND1

(Note 4): Relative to GND2

Terminal Descriptions

Pin name	Description
VCC1	Input-side Power Supply
INAH	Input-side Control A on High-side
INBH	Input-side Control B on High-side
INAL	Input-side Control A on Low-side
INBL	Input-side Control B on Low-side
GND1	Input-side Ground
GND2L	Output-side Ground on Low-side
GATE_L	Output-side Gate Control on Low-side
VCC2L	Output-side Power Supply on Low-side
GND2H	Output-side Ground on High-side
GATE_H	Output-side Gate Control on High side
VCC2H	Output-side Power Supply on High side

Schematics

R112, R113, R121, R122, R212, R213, R221, and R222 are implemented interim resistors for shipment check. Please replace each resistor which can work with Power Device or input device appropriately.

Bill of Materials

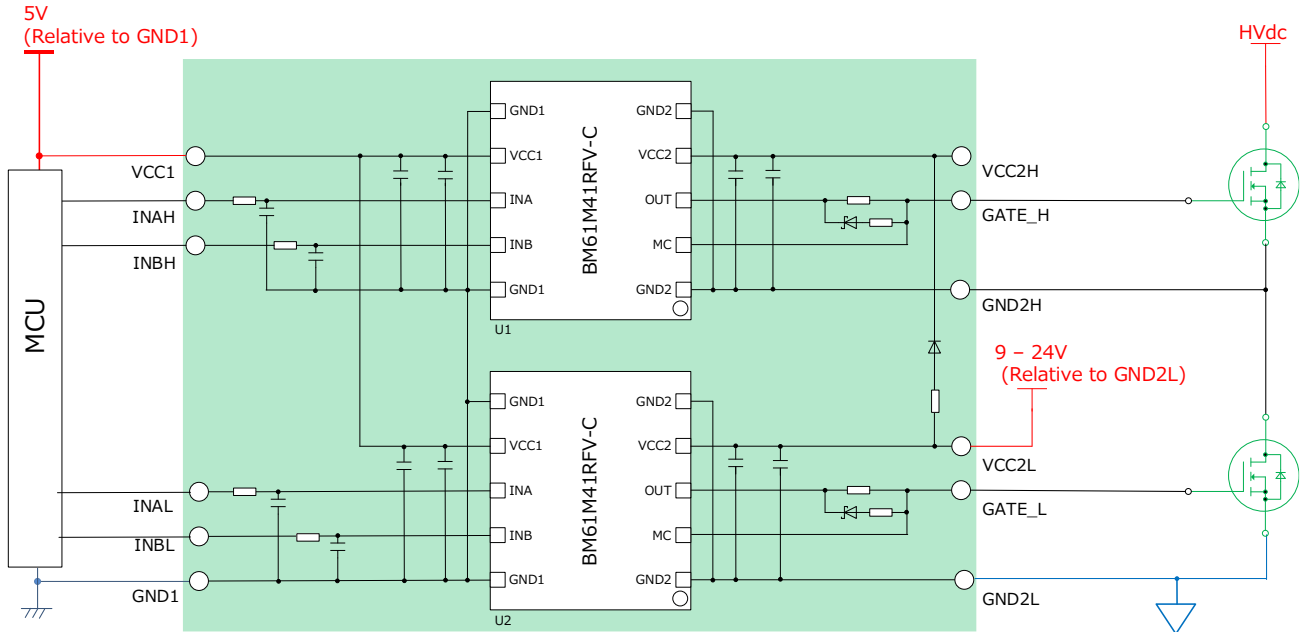

Device	Parts No.	Description	Manufacturer	Parts name	Qty.
Gate Driver	U1, U2	1ch, 9-24V	ROHM	BM61M41RFV-C	2
Input Capacitor	C111, C211	10uF, 50V, X7R, 3216	TDK	CGA5L1X7R1H106K160	2
	C114, C214	(no stuff)			0
Input signal filter	R112, R113, R212, R213	0 ohm, 1608	ROHM	MCR03EZPJ000	4
	C112, C113, C212, C213	(no stuff)			0
Output Capacitor	C121, C221	10uF, 50V, X7R, 3216	TDK	CGA5L1X7R1H106K160	2
	C122, C222	(no stuff)			0
Gate	R121, R221	0.1 ohm, 3216	ROHM	LTR18EZPJLR10	2
	R122, R222	0.1 ohm, 3216	ROHM	LTR18EZPJLR10	2
	D121, D122	Schottky Diode, 30V, 5A	ROHM	RBR5L30BDD	2
Bootstrap	D-B	(no stuff)			0
	R-B	(no stuff)			0
Test pin	T1, T2, T3, T4, T5, T6, T7, T8, T9, T10, T11, T12 (Option)	(no stuff)	Hirosugi-Keiki	HT-0710-3	12
Spacer	(Option)	M2, 10mm	Hirosugi-Keiki	BSN2010	4
Nut	(Option)	M2	Hirosugi-Keiki	NNT-00	4

Materials may be changed without notice.

Application and Operation procedure

Following figure is shown the example application. MOSFET and microcontroller [MCU] are connected to the board via terminals. VCC2H power can be supplied from VCC2L by using bootstrap circuit. Please place appropriate components on the EVK for bootstrap. Please make sure to replace the appropriate value for each resistor and capacitor on the board depends on your applications. The numerous application notes can be referenced to help facilitate designs. Useful application notes are listed on page 8.

Example Application

Additional Components for Bootstrapping

R-B and D-B parts are for bootstrapping. Place appropriate components depends on your applications.

Examples:

D-B: ROHM RFN2LAM6STF [Reverse voltage: 600V, Current: 1.5A, Package: PMDTM]

R-B: ROHM ESR18 series resistor [Package size: 3216mm]

Front

Back

Equipment

- DC Power Supply: 5 V for control signal [5 VDC], 9 to 24 V for Power Device [9 to 24 VDC]
- Microcontroller [MCU]: Input signal for controlling GATE output
- Power Device: MOSFET

We have many power devices which can work with Evaluation Board. You can get applicable product information from our web site. Some products are shown on page 8.

Instructions

Before start to connect, make sure to turn off all equipment for your safety.

1. Connect 5 VDC to VCC1–GND1 terminal on board.
Stay turn off the power supply.
2. Connect 9 to 24 VDC to VCC2L-GND2L terminal on board.
Stay turn off the power supply.
3. Connect MCU to the INAH, INBH, INAL, and INBL terminal on board.
Refer to the Input / Output terminal Control description on page 2.
4. Connect GATE_H and GATE_L terminal on board to each gate terminal on power devices.
5. Turn on the 5 VDC and MCU.
6. Turn on the 9 to 24 VDC.

PCB Layout

Board size: 33 x 32 mm, Material:FR-4, 4-layer.

Input-side capacitors and output capacitors [C111, C114, C121, C122, C211, C214, C221, and C222] are placed on bottom side in order to reduce board size. When you design your PCB layout, we recommend to place them to the same side and near the gate driver as close as possible.
