## Product Description

Capacitive sensor in M30 thermoplastic polyester housing for mounting with 2 nuts. Available with adjustable sensing distance and with/without built-in time

delay (ON or OFF delay). The relay output ensures that the load can be driven directly. Excellent for use in the agricultural sector (detection of grains, fluids etc.).

### Mode of Operation

**CA30CLN12MU10M** (See operation diagram). Power supply is applied to the sensor (BN and BU wires). When the target is not present, the relay operates (connection between GR and BK wires) and LED lights. When the target is detect-

ed the time measurement starts and LED flashes. After expiration of the set time (0-10 min.), the relay releases (connection between GR and WH wires) and LED turns off. The relay remains released as long as the target is detected.

**CA30CLN12MV10M** (See operation diagram). Power supply is applied to the sensor BN and BU wires) and time measurement starts. When the set time has expired (0-10 min.) the relay operates (connection between GR and BK wires)

and remains connected until the target is detected. After activation of the sensor the relay releases (connection between GR and WH wires). As soon as the target is not present again the time measurements of the set time starts.

**CA30CLN12MT** (See operation diagram). Power supply is applied to the sensor (BN and BU wires). The relay operates (connection between GR and BK wires)

and remains ON until the target is detected. After activation of the sensor the relay releases (connection between GR and WH wires.)
