## LED Driver, Constant Current Programmable, with 32 Dimming Levels

### Description

The CAT4003B and CAT4004B provide respectively three and four matched low dropout current sources to drive LEDs. The CAT400XB requires no external RSET resistor. The LED current is internally set to 25 mA when the device is first enabled. Each LED channel includes an individual control loop allowing the device to handle a wide range of LED forward voltages while still maintaining tight current matching.

The EN/DIM logic input supports the device enable and a digital dimming interface for setting the LED channel current with 32 linear dimming levels.

LEDs can be powered directly from a Lithium-ion battery due to the low dropout (75 mV at 20 mA) current sinks.

Package options are available in the 4-channel tiny 8-pad UDFN 2 mm x 2 mm with a max height of 0.55 mm, and 3-channel in the 6-lead TSOT-23, TSOP and SC-70.

### Features

- 3, 4 LED Current Sinks with Tight Matching
- 32 Dimming Levels
- Low Dropout Driver 75 mV at 20 mA
- No Switching Noise
- Shutdown Current less than 1  $\mu$ A
- 25 mA Max LED Current per Channel
- Dimming via 1-wire EZDim Interface
- Thermal Shutdown Protection
- RoHS Compliant
- 6-lead TSOT-23, TSOP, SC-70, and 8-pad UDFN 2 mm x 2 mm Packages

### Typical Applications

- LCD Display Backlight
- Cellular Phones
- Digital Still Cameras

**Figure 1. CAT400XB EN/DIM Dimming Timing Diagram**

## LED Current Setting

On the CAT400XB, the full scale LED current is internally set to 25 mA (no external resistor).

When the EN/DIM is first enabled, the CAT400XB sets the LED channel current to the full scale current. Each

consecutive rising edge on the EN/DIM decreases the LED current by one step until it goes to zero, as shown on Figure 1.

## CAT4003B, CAT4004B

### Pin Functions

**V<sub>IN</sub>** is the supply pin for the charge pump. A small 1 μF ceramic bypass capacitor is required between the V<sub>IN</sub> pin and ground near the device. The operating input voltage range is from 2.4 V to 5.5 V. Whenever the input supply falls below the under-voltage threshold (2.0 V), all the LED channels are disabled and the device enters shutdown mode.

**EN/DIM** is the enable and one wire dimming input for all LED channels. Levels of logic high and logic low are set at 1.3 V and 0.4 V respectively. When EN/DIM is initially taken high, the CAT400XB becomes enabled and all LED currents are set to the full scale 25 mA. To place the device

into “zero current” shutdown mode, the EN/DIM pin must be held low for 3 ms typical

**LED1 to LED4** provide the internal regulated current for each of the LED cathodes. The pins enter a high impedance zero current state whenever the device is placed in shutdown mode.

**GND** is the ground reference for the device. The pin must be connected to the ground plane on the PCB.

**TAB** (CAT4004B only) is the exposed pad underneath the package. For best thermal performance, the tab should be soldered to the PCB and connected to the ground plane.

Figure 12. CAT4004B Functional Block Diagram

### Basic Operation

The CAT400XB uses tightly matched current sinks to accurately regulate LED current in each channel.

There are 32 different settings for LED brightness that can be programmed through the EN/DIM pin. Tight current regulation for all channels is possible over a wide range of input and LED voltages due to independent current sensing circuitry on each channel.

Each LED channel needs a minimum of 75 mV headroom to sink a constant regulated current of 20 mA. If the input supply falls below 2.0 V, the under-voltage lockout circuit disables all LED channels and resets the circuit to default values. Any unused LED channels should be left open.

### CAT400XB LED Current Selection

After power-up and once enabled, the LED current is set initially to the full scale current of 25 mA. The number of pulses (n) on the EN/DIM input does decrease the current value as follows:

$$\text{LED current [mA]} = 25 \times \left( \frac{31 - n}{31} \right)$$

The full scale current is calculated from the above formula with n equal to zero.

The EN/DIM pin has two primary functions. One function enables and disables the device. The other function is LED current dimming with 32 different levels by pulsing the input signal, as shown on Figure 1. On each successive pulse rising edge, the LED current is decreased by about 3.2% (1/31st of the full scale value). After 30 pulses, the LED current is 3.2% of the full scale current. On the 31<sup>st</sup> pulse, the current drops to zero, and then goes back to full scale on the following pulse.

Initially once the EN/DIM input is first pulled high, it must remain high for at least T<sub>SETUP</sub> delay (10 μs minimum) to allow the LED driver to complete its power-up. After this delay, EN/DIM can be pulsed in order to set the LED current to the desired level. Each pulse width should be between 1 μs and 500 μs. Pulses faster than the minimum T<sub>LO</sub> may be ignored and filtered by the device. Pulses longer than the maximum T<sub>LO</sub> may shutdown the device. By pulsing the EN/DIM signal at a high frequency, the LED current can quickly be set to zero or to any other level.

## CAT4003B, CAT4004B

The LED driver enters a “zero current” shutdown mode if EN/DIM is held low for longer than 5 ms.

The dimming level is set by the number of pulses on the EN/DIM after the power-up, as shown in Table 6.

**Table 6. DIMMING LEVELS**

| Full Scale Current in % | Dimming Pulses [n] |
|-------------------------|--------------------|
| 100                     | 0                  |

## PACKAGE DIMENSIONS

ON Semiconductor®

SCALE 2:1

### UDFN8, 2x2 CASE 517AW ISSUE A

DATE 13 NOV 2015

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. DIMENSION b APPLIES TO PLATED TERMINALS AND IS MEASURED BETWEEN 0.15 AND 0.30 MM FROM THE TERMINAL TIP.
4. COPLANARITY APPLIES TO THE EXPOSED PAD AS WELL AS THE TERMINALS.
5. FOR DEVICE OPN CONTAINING W OPTION, DETAIL B ALTERNATE CONSTRUCTION IS NOT APPLICABLE.

| DIM | MILLIMETERS |      |
|-----|-------------|------|
|     | MIN         | MAX  |
| A   | 0.45        | 0.55 |
| A1  | 0.00        | 0.05 |
| A3  | 0.13 REF    |      |
| b   | 0.18        | 0.30 |
| D   | 2.00 BSC    |      |
| D2  | 1.50        | 1.70 |
| E   | 2.00 BSC    |      |
| E2  | 0.80        | 1.00 |
| e   | 0.50 BSC    |      |
| L   | 0.20        | 0.45 |
| L1  | ---         | 0.15 |
