CONNECTCORE[®] FOR i.MX51

High-end Cortex-A8 System-on-Module solution delivers industry-leading performance, low-power operation, and fully integrated 802.11a/b/g/n + Ethernet networking

The network-enabled ConnectCore for i.MX51 family offers a highly integrated and future-proof System-on-Module (SOM) solution based on the new Freescale[®] i.MX515 application processor, which offers a high-performance ARM[®] Cortex[™]-A8 core, powerful multimedia options, and on-chip peripherals.

The modules combine the fast integration, reliability and design flexibility of an off-the-shelf SOM with complete out-of-the-box software development support for platforms such as Microsoft[®] Windows[®] Embedded CE 6.0, Windows Compact 7 and Digi[®] Embedded Linux.

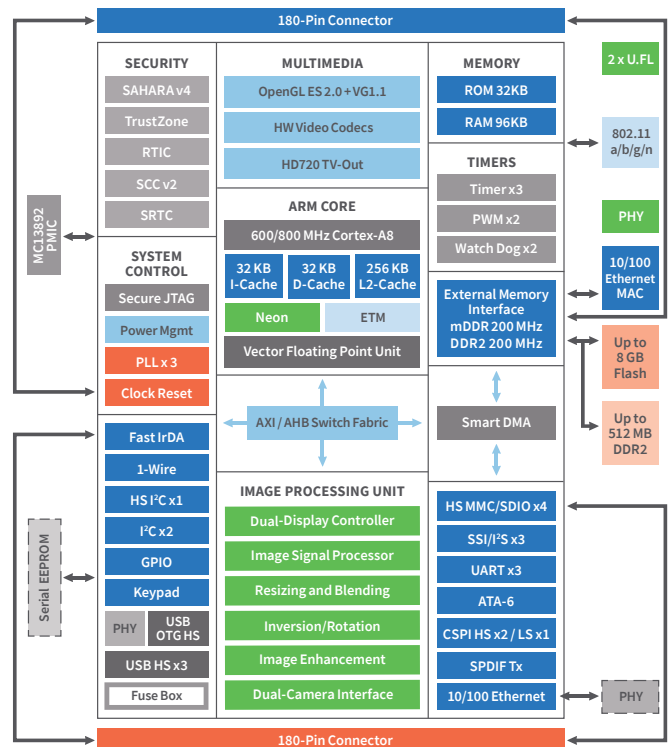

With industry-leading performance and key features such as a dual-display interface and a hardware encryption engine, the module is the ideal choice for a broad range of target markets including medical, digital signage, security/access control, retail, industrial/building automation, transportation and more.

Complete and cost-efficient Digi JumpStart Kits[®] allow immediate and professional embedded product development with dramatically reduced design risk and time-to-market.

BENEFITS

- High-end, low-power 32-bit System-on-Modules
- Integrated 10/100 Mbit Ethernet networking
- Pre-certified 802.11a/b/g/n wireless LAN interface
- On-chip hardware encryption engine
- Hardware accelerated high-definition multimedia
- Power Management IC and accelerometer integrated
- Industrial operating temperature available
- Low-emission design with FCC Class B compliance
- ZigBee[®], cellular and satellite connectivity options
- Windows Embedded and Linux support

DIGI JUMPSTART KITS OVERVIEW

DIGI JUMPSTART KIT FOR EMBEDDED LINUX

Built around a standard Linux 2.6 kernel distribution, the Digi JumpStart Kit for Embedded Linux is tailored to the specific needs of embedded Linux development and provides an easy-to-use, complete off-the-shelf embedded development platform. It includes all components that are required to build secure network-enabled products based on the ConnectCore for i.MX51.

The kit includes Digi ESP™ for Embedded Linux, a powerful and fully Linux-hosted Integrated Development Environment based on the open Eclipse™ framework. Ideal for new and experienced Linux developers, Digi ESP improves software design productivity by accelerating and greatly simplifying driver and application development through a user-friendly graphical interface.

- Complete Linux development platform for embedded systems
- Royalty-free and with optimized 2.6 kernel and services support
- Linux-based Digi ESP IDE for rapid product development
- Full Linux and Digi Board Support Package (BSP) source code included

DIGI JUMPSTART KIT FOR MICROSOFT WINDOWS EMBEDDED

Microsoft Windows Embedded Compact 7 is a highly componentized operating system, offering pre-tested technology components designed to create sophisticated embedded applications with minimized design effort and risk. It includes a wide range of ready-to-use components such as a graphical user interface, networking, web browser and multimedia. The professional Microsoft Visual Studio 2008 development tools also support native and managed code applications using various programming languages.

The Digi JumpStart Kit for Microsoft Windows Embedded provides out-of-box support for Microsoft Windows Compact 7 and its predecessor Microsoft Windows Embedded CE 6.0 R3. It is a complete development kit with the hardware and software components needed for immediate product development. This includes support for all module platform features such as power management, multimedia interfaces and other peripherals.

- Complete kits for immediate Microsoft Windows Embedded development
- Out-of-box support for Microsoft Windows Embedded CE 6.0 R3 and Microsoft Windows Embedded Compact 7
- Full Digi Board Support Packages (BSPs) with source code
- Includes free 180-day Microsoft evaluation kit for CE 6.0 R3, Windows Compact 7 and Visual Studio 2005/2008

SOFTWARE PLATFORM	DIGI EMBEDDED LINUX	MICROSOFT WINDOWS EMBEDDED
