

Product Overview

The CMD305C4 is a broadband MMIC driver amplifier housed in a leadless 4x4 mm surface mount package. The CMD305C4 is ideally suited for EW and communications systems where small size and low power consumption are needed. The broadband device delivers 18.5 dB of gain and +21 dBm saturated output power at 23% PAE from a single 5 V supply. The CMD305C4 is a 50 ohm matched design eliminating the need for external DC blocks and RF port matching.

Applications Information

Application Circuit

Biasing and Operation

The CMD305C4 is biased with a single 5.0 V positive drain supply.

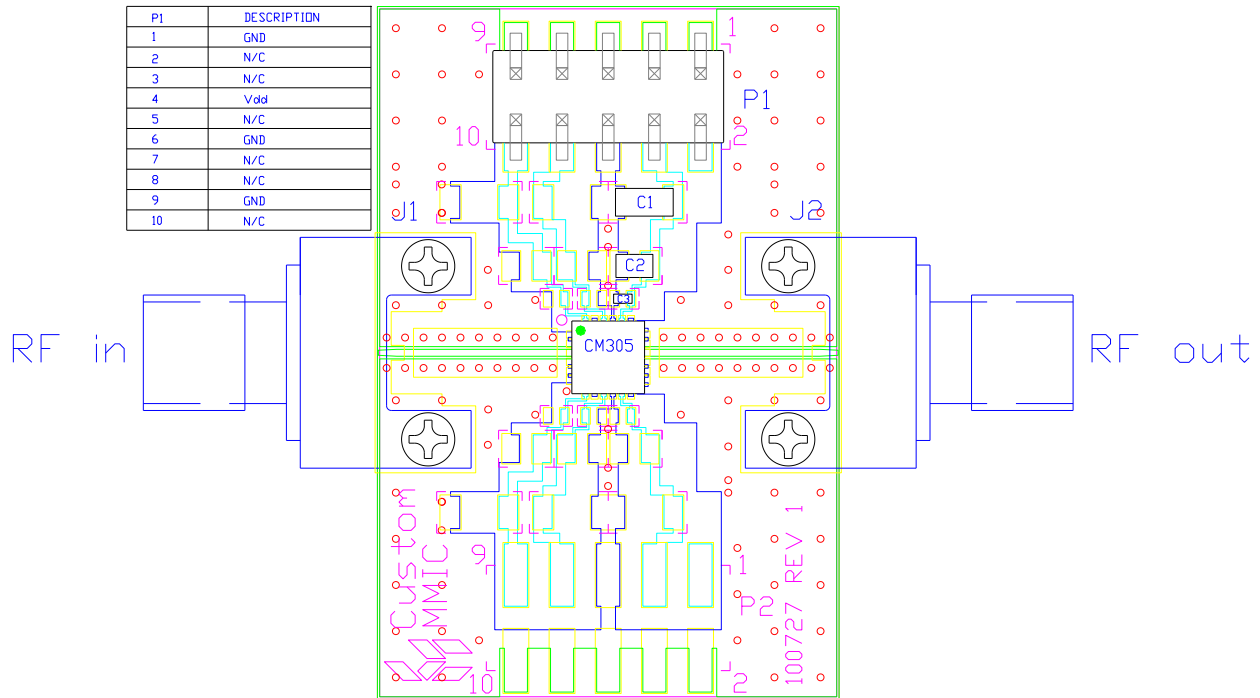

RF power can be applied at any time.

GaAs MMIC devices are susceptible to damage from Electrostatic Discharge. Proper precautions should be observed during handling, assembly and test.

Applications Information

Evaluation Board

The circuit board shown has been developed for optimized assembly at Qorvo. A sufficient number of via holes should be used to connect the top and bottom ground planes. As surface mount processes vary, careful process development is recommended.
