Your Choice!

### Industry Leader

With over 50 years experience, Teledyne is the world's innovative leader in manufacturing ultraminiature, hermetically sealed, electromechanical and solid-state switching products. Our comprehensive product line meets a wide range of requirements for industrial, commercial, medical, RF & wireless, defense and aerospace applications.

### Product Assurance

Under an aggressive Total Quality Management (TQM) program, Teledyne has embraced a "continuous improvement" culture. With recognized certifications such as Boeing D6-82479, MIL-STD-790, AS/EN/ JISQ9100:2009 (Rev C) and ISO 9001:2008, Teledyne has become a primary supplier of switching solutions with the highest quality and reliability to industry leaders around the world.

### Product Development

Teledyne offers a full range of comprehensive switching solutions. In addition to offering standard switching solutions, our experienced team works closely with our customers to develop tailored products for specific applications. We offer advanced engineering, state-of-the-art manufacturing techniques, and over 50 years of switching experience with a commitment to quality, costs and delivery.

### Standard & Custom Matrix Assemblies

Teledyne offers a wide variety of RF matrix assemblies. Incorporating highly repeatable and long-cycle-life relays and switches, our matrices cover the spectrum from DC to 40GHz.

Teledyne's modular approach to building matrices allows assembly of a vast array of customized matrices with the same standard subassemblies. The internal components utilize Teledyne's proven switches. Our universal programmable microcontroller can be used for any matrix configuration. The universal power supply allows the matrix assembly to be used worldwide.

### Low PIM Switches

Teledyne offers coaxial switches that have extremely low passive intermodulation for use in narrow bandwidth communication applications. The low PIM switches come in a variety configurations, such as, SPDT, Transfer and Multi-Throws.

**Spanning the Spectrum** — Teledyne delivers switching solutions from DC to 40 GHz, with higher frequencies in development.

**Matrix Assemblies** — Teledyne provides matrix assemblies, such as the Model CSM-0003 1x40 Switch Matrix, that incorporate coaxial switches.

Featured switching solutions include:

### Microwave Switch Matrix Assemblies

- Multiple standard and customized configurations
- Universal Power Supply
- Visual Display – LCD
- Standard and custom chassis available

### CCR-40K DC-40 GHz SPDT Switch

- Excellent insertion loss repeatability
- Ultra low passive intermodulation (PIM)
- Characterized at 5 million cycles
- Compact design with 40 GHz performance

### Space-Qualified Switches

Teledyne's space-qualified coaxial switches are typically custom-designed and manufactured according to specific performance requirements. We also provide a complete line of standard, off-the-shelf switches that offer customers significant cost savings, while satisfying most typical requirements for scientific, meteorological and communication satellite applications.

### Technical Service & Customer Support

Teledyne provides easy access to technical service and customer support. Our website makes it easy to find technical information, buy products and even get e-mail responses within 24 hours. Switching solutions are only a mouse click away at [www.teledynecoax.com](http://www.teledynecoax.com).

### Space-Qualified Switches

- Wide range of screening options available
- Custom designs to suit any application
- Proven heritage in space

## TABLE OF CONTENTS

SERIES OVERVIEW .....	1-14
PART NUMBERING SYSTEM .....	15
SPDT SWITCHES .....	16-21
TRANSFER/2P3T SWITCHES .....	22-25
MULTI-THROW SWITCHES .....	26-37
LOW PIM SWITCHES .....	38-46
POWER HANDLING VS FREQUENCY CHART .....	47
ADDITIONAL UNIQUE OPTIONS .....	48
GLOSSARY .....	49-50
CUSTOM MATRIX.....	51-52
MINI MATRIX.....	53-56
SERIES RF121/GRF121 RELAY.....	57
INDIUM PHOSPHIDE ACTIVE RF SWITCH.....	58
CUSTOM HYBRID SOLUTIONS.....	59
OTHER TELEDYNE PRODUCTS ( <i>EMR, COAX, ISSR, MSSR, MATRIX, SPACE</i> ) .....	60-65

### RF121 / GRF121

- Broader bandwidth (DC - 18GHz)
- Signal integrity up to 40Gbps
- SPDT, Magnetic Latching
- Metal Enclosure for EMI shielding
- High Repeatability
- 3 Million Cycle Life

See Page 57

### Indium Phosphide (Active RF Switch)

- Greater than 40Gbps bandwidth
- Broad frequency bandwidth, DC-60GHz
- Small form factor, 3mm X 3mm X 1 mm
- High linearity
- Low insertion loss
- Switching time of less than 100ns

**InP Series**  
See Page 58

## PART NUMBER SYSTEM

This guide shows the model numbers for switches by Teledyne Coax Switches. For technical support or custom switches for specific applications, call (800) 351-7368.

Example: CCR-33S10-T (Commercial SPDT, S=SMA, 28 Vdc, Failsafe, TTL)

All standard switches are RoHS compliant. Contact factory for other options.

## Power Handling vs Frequency Chart

Estimates based on the following reference conditions:

- Ambient temperature of 40°C or less
- Sea level operation
- Load VSWR of 1.20:1 maximum
- No high-power (hot) switching

Please contact Teledyne Coax Switches for derating factors when applications do not meet the foregoing reference conditions.

# Additional Unique Options

Switch Blocks

Alternative Connector Locations

Radiation Shielding Covers

6P7T Switch

DC Long Flying Leads

PCB Pin Option

Short Cover Option

DC Flying Leads

QMA RF Connectors

Teledyne Coax Switches offers numerous options for coaxial switches:

- Double Insulation
- Radiation Shielding
- Customized Mounting Brackets
- Special Power Connectors
- Alternate RF Connectors
- Alternate DC terminal styles
- Short Covers
- PCB Mount RF Pins
- Switch Blocks
- 6P7T Switch Matrix
- Parallel or Series Diodes
- Redundant Diode Configuration
- Pressure Evacuation Vent

Please feel free to contact us for more information regarding additional options and custom configurations.

## Actuator

An actuator is the electromechanical mechanism that transfers the RF contacts from one position to another upon DC command.

## Arc Suppression Diode

A diode is connected in parallel with the coil. This diode limits the “reverse EMF spike” generated when the coil de-energizes to 0.7 volts. The diode cathode is connected to the positive side of the coil and the anode is connected to the negative side.

## Date Code

All switches are marked with either a unique serial number or a date code. Date codes are in accordance with MIL-STD-1285 Paragraph 5.2.5 and consist of four digits. The first two digits define the year and the last two digits define the week of the year (YYWW). Thus, 0532 identifies switches that passed through final inspection during the 32nd week of 2005.

## Failsafe

A failsafe switch reverts to the default or failsafe position when the actuating voltage is removed. This is realized by a return spring within the drive mechanism. This type of switch requires the continuous application of operating voltage to select and hold any position. (Multi-position switches are normally open with no voltage applied).

## Latching

A latching switch remains in the selected position whether or not voltage is maintained. This can be accomplished with either a magnetic or mechanical latching mechanism.

## Indicator

Indicators tell the system which position the switch is in. Other names for indicators are telemetry contacts or tellback circuit. Indicators are usually a set of internally mounted DC contacts linked to the actuator. They can be wired to digital input lines, status lights, or interlocks. Unless otherwise specified, the maximum indicator contact rating is 30 Vdc, 50 mA, or 1.5 Watts into a resistive load.

## Internal Termination

Unselected ports are connected internally to a matched load. The load is a 50-Ohm resistive device. The max RF power rating is 2 watts CW. Without the internal termination option, the unselected ports are open circuits.

## Isolation

Isolation is the measure of the power level at the output connector of an unconnected RF channel as referenced to the power at the input connector. It is specified in dB below the input power level.

## Multi-Throw Switch

A multi-throw switch is a switch with one input and three or more output ports. The CCT-58 can switch a microwave signal to any of 2, 3, 4, 5 or 6 outputs from a single common input.

## Multi-Throw Latching Switch

### DUAL PULSE SWITCHING COMMAND CHARACTERISTICS:

1. APPLIES FOR SINGLE-POLE MULTI-THROW LATCHING SWITCH ONLY.
2. MUST APPLY RESET PULSE FIRST (BREAK-BEFORE-MAKE).
3. RESET AND SET DEFINITIONS  
RESET: OPEN ALL RF PATHS (POSITIONS).  
SET: CLOSE THE SELECTED RF PATH (POSITION).
4. COMMAND PULSE TIMING:

5. COMMAND SWITCHING VOLTAGE:  
V = 26-32 VDC PULSE

6. SWITCHING CURRENT:

SWITCHING CURRENT AT 28 VDC AND 20°C		
NO. OF POS.	RESET (I <sub>1</sub> )	SET (I <sub>2</sub> )
3 POS.	270 mA	90 mA
4 POS.	360 mA	90 mA
5 POS.	450 mA	90 mA
6 POS.	540 mA	90 mA

## Self-Cutoff

The self-cutoff option disables the actuator current on completion of actuation. Either a series contact (linked to the actuator) or an IC driver circuit provides the current cutoff. This option results in minimum power consumption by the RF switch. Cutthroat is another name used in the industry for this option. Pulse latching is a term sometimes used to describe a switch without this feature.

## SPDT Switch

A single-pole double-throw switch has one input and two output ports.

## Switching Time

Switching time is the total interval beginning with the arrival of the leading edge of the command pulse at the switch DC input and ending with the completion of the switch transfer, including contact bounce. It consists of three parts: (1) inductive delay in the coil, (2) transfer time of the physical movement of the contacts, and (3) the bounce time of the RF contacts.

## Transfer Switch

A four-port switch consisting of two independent pairs of RF paths. These pairs are actuated simultaneously. This actuation is similar to that of a double-pole double-throw switch. See application notes for typical usage.

## TTL Switch Driver Option

As a special option, switch drivers can be provided for both failsafe and latching switches, which are compatible with industry-standard low-power Schottky TTL circuits.

## T-Option

This option is for TTL Driver. There is one control input for each position. See the logic table.

## TD-Option

This option includes a decoder. The 3-bit parallel command is decoded to internally select the appropriate position. See the logic table.

The TD-Option increases the Vsw supply current demand by 50mA max at 28 Vdc and +20°C.

Failsafe uses 1 circuit. Latching uses 2 circuits (Vsw & C are common to both circuits).

## Glossary

### Performance Parameters vs Frequency

Generally speaking, the RF performance of coaxial switches is frequency dependent. With increasing frequency, VSWR and insertion loss increase while isolation decreases. All data sheets specify these parameters as “worst case” at the highest operating frequency. If the switch is to be used over a narrow frequency band, better performance can be achieved.

### Actuator Current vs Temperature

The resistance of the actuator coil varies as a function of temperature. There is an inverse relationship between the operating temperature of the switch and the actuator drive current. For switches operating at 28 VDC, the approximate actuator drive current at temperature, T, can be calculated using the equation:

$$I_T = \frac{I_A}{[1 + .00385 (T-20)]}$$

Where:

$I_T$  = Actuator current at temperature, T

$I_A$  = Room temperature actuator current – see data sheet

T = Temperature of interest in °C

### Magnetic Sensitivity

An electro-mechanical switch can be sensitive to ferrous materials and external magnetic fields. Neighboring ferrous materials should be permitted no closer than 0.5 inches and adjacent external magnetic fields should be limited to a flux density of less than 5 Gauss.

### Series Application of Multi-Throw Switches

This example shows a single-pole 9-throw unit made up of four 3-throw switches. The number of throws possible using this technique is essentially unlimited and is equal to the total number of throws available in the output stage. If a two-stage unit were set up using six position switches, the resultant would be a total of 36 outputs or a SP36T switch bank. See Figure 1.

Figure 1

### Transfer Switch

The transfer switch is essentially a modified double-pole-double-throw (DPDT) device. However, a true DPDT switch is a six port device that contains two totally independent transmission paths. In a transfer switch two transmission paths are provided but they are not totally independent as illustrated in Figure 2.

Figure 2

Examples of applications of the transfer switch are as follows:

### Two Transmitters to Either of Two Antennas

Two microwave transmitters can be connected to either of two alternate antennas as shown in Figure 3.

Figure 3

### Circuit Insertion

A complete microwave circuit or circuit element can be inserted into a transmission line by using a transfer switch as shown in Figure 4.

Figure 4

In the event that the 1-3 shorting of the microwave circuit is undesirable, this leg can be left out.

## Special Feature

### Low PIM or Highly Sensitive Signals

Ensure the most linear response with the best galvanically matched contact system in the industry. Reference tests have been done on our standard switches for Passive Intermodulation performance.

Carrier Frequency 1	Carrier Frequency 2	PIM 3rd Order Frequency	PIM 5th Order Frequency
870 MHz	893 MHz	847 MHz	824 MHz

	3rd Order Intermodulation	5th Order Intermodulation
SPDT	-91 dBm	-110 dBm
	-134 dBc	-153 dBc
Transfer	-103 dBm	-123 dBm
	-146 dBc	-165 dBc
Multiple Positions	-96 dBm	-115 dBm
	-139 dBc	-158 dBc

Teledyne, the world's innovative leader in manufacturing electromechanical and solid-state switching products for more than 50 years, offers a modular approach to matrix assembly switching.

Incorporating highly repeatable and long-cycle-life relays and switches, Teledyne's matrices cover the spectrum from DC to 40GHz. Teledyne's modular

approach to building matrices allows assembly of a vast array of customized matrix assemblies with the same standard subassemblies. The internal components of the assembly and main module utilize Teledyne's proven relays and switches. Teledyne has developed a

standard programmable microcontroller that can be used for nearly any matrix configuration.

The universal power supply allows the matrix assembly to be used worldwide. Teledyne is highly vertically integrated, which reduces development time, qualification time, cost and lead time, while ensuring high quality and cost-effective production.

To learn more, call us or visit us online today. And see what Teledyne Coaxial Switches can do for you.

## FEATURES

- Fully customized switching configurations
- Universal Power Supply
- Visual Display – LED
- Standard and custom racks available
- Manual/direct and/or remote control
- Multiple interface configurations:  
RF ports – SMA, 2.92mm, N, SMB, TNC, etc.  
Control – RS-232, Ethernet, USB, Keypad, etc.
- 50 and 75 ohm impedances

## TYPICAL INSERTION LOSS / ISOLATION\*\*

**CUSTOM SWITCH MATRIX**

**ADDITIONAL FEATURES**

- Monitor cycle count
- System health/system status
- LEDs: Visual status
- In-circuit programming (firmware upgradeable)

**TYPICAL RETURN LOSS\*\***

\*\*Sample measurement from a 1x40 switch matrix. For reference only, contact factory for additional details

**PART NUMBER DESCRIPTION**

The MMA Series is an ideal solution that consists of SPDT, electromechanical coaxial switches designed to switch a microwave signal from a common input to either of two outputs. The characteristic impedance is 50 Ohms. The terminated option provides an impedance match for the unselected port.

The MMA Series is designed to allow the remote operation of 1 to 4 Single Pole Double Throw switches. Remote operation is accomplished via TCP/IP commands to the Matrix's Ethernet interface. Switch control is also accessible via the USB virtual serial port, using the provided command set. Through these interfaces the Coax Switch can be switched to the desired position and its position can be read for verification. The default switch position at power up can be set by the user. The MMA will feature a graphical user interface (GUI), which will enable user to control switches through graphical icons and visuals.

**ENVIRONMENTAL AND PHYSICAL CHARACTERISTICS**

Operating Temperature	-40°C to 65°C
Standard Actuator Life	5,000,000 cycles
Connector Type	SMA, 2.92mm, N, TNC, SMB
Weight Non-Terminated	
1 Switch	18 oz. (510 g) (max.)
2 Switches	20 oz. (567 g) (max.)
4 Switches	23 oz. (652 g) (max.)
Weight Terminated	
1 Switch	60 oz. (1701 g) (max.)
2 Switches	62 oz. (1758 g) (max.)
4 Switches	64 oz. (1814 g) (max.)

**ELECTRICAL CHARACTERISTICS (SWITCHES ONLY)**

Form Factor	SPDT, break before make
Frequency Range	Up to DC-40 GHz
Characteristic Impedance	50 Ohms, 75 Ohms (SMB only)
Operate Time	15 ms (max.)
Release Time	15 ms (max.)
Actuation Voltage	24Vdc
Actuation Current, max. @ ambient	Varies

**ADDITIONAL INFORMATION**

Interface	USB or TCP/IP
Host Operating System	Windows, MAC, Linux
Operating System	Embedded

**INCLUDED ITEMS**

• AC/DC Power Adapter	• USB Cable
• Power Cord	• Installation CD
• Ethernet Cable	

**BLOCK DIAGRAM EXAMPLE**

## PART NUMBER DESCRIPTION

The MMB Series is an ideal solution that consists of Transfer, electromechanical coaxial switches designed to switch a microwave signals in a DPDT configuration. The characteristic impedance is 50 Ohms.

The MMB Series is designed to allow the remote operation of 1 to 4 Transfer switches. Remote operation is accomplished via TCP/IP commands to the Matrix's Ethernet interface. Switch control is also accessible via the USB virtual serial port, using the provided command set. Through these interfaces the Coax Switch can be switched to the desired position and its position can be read for verification. The default switch position at power up can be set by the user. The MMB will feature a graphical user interface (GUI), which will enable user to control switches through graphical icons and visuals.

## ENVIRONMENTAL AND PHYSICAL CHARACTERISTICS

Operating Temperature	-40°C to 65°C
Standard Actuator Life	5,000,000 cycles
Connector Type	SMA, N, TNC
Weight Enclosure A - SMA Models	
1 Switch	22 oz. (624 g) (max.)
2 Switches	24 oz. (680 g) (max.)
Weight Enclosure B - SMA Models	
2 Switches (N or TNC)	72 oz. (2041 g) (max.)
4 Switches	64 oz. (1814 g) (max.)

## ELECTRICAL CHARACTERISTICS (SWITCHES ONLY)

Form Factor	DPDT, break before make
Frequency Range	Up to DC-26.5GHz
Characteristic Impedance	50 Ohms
Operate Time	15 ms (max.)
Release Time	15 ms (max.)
Actuation Voltage	24Vdc
Actuation Current, max. @ ambient	Varies

## ADDITIONAL INFORMATION

Interface	USB or TCP/IP
Host Operating System	Windows, MAC, Linux
Operating System	Embedded

## INCLUDED ITEMS

• AC/DC Power Adapter	• USB Cable
• Power Cord	• Installation CD
• Ethernet Cable	

## BLOCK DIAGRAM EXAMPLE

**PART NUMBER DESCRIPTION**

The MMC Series is an ideal solution that consists of multi-throw, electromechanical coaxial switches designed to switch a microwave signal from a common input to any of 3, 4, 5, 6, 7 or 8 outputs. The characteristic impedance is 50 Ohms. With the normally open actuator, all paths are open when the switch is de-energized.

The MMC Series is designed to allow the remote operation of 1 to 2 Single Pole Multi Throw switches. Remote operation is accomplished via TCP/IP commands to the Matrix's Ethernet interface. Switch control is also accessible via the USB virtual serial port, using the provided command set. Through these interfaces the Coax Switch can be switched to the desired position and its position can be read for verification. The default switch position at power up can be set by the user. The MMC will feature a graphical user interface (GUI), which will enable user to control switches through graphical icons and visuals.

**ENVIRONMENTAL AND PHYSICAL CHARACTERISTICS**

Operating Temperature	-40°C to 65°C
Standard Actuator Life	5,000,000 cycles
Connector Type	SMA, 2.9mm
Weight Non-Terminated	
1 Switch	26 oz. (737 g) (max.)
2 Switches	32 oz. (907 g) (max.)
Weight Terminated	
1 Switch	54 oz. (1531 g) (max.)
2 Switches	60 oz. (1701 g) (max.)

**ELECTRICAL CHARACTERISTICS (SWITCHES ONLY)**

Form Factor	Multi-Throw, break before make
Frequency Range	Up to DC-40 GHz
Characteristic Impedance	50 Ohms
Operate Time	15 ms (max.)
Release Time	15 ms (max.)
Actuation Voltage Available	24 Vdc
Actuation Current, max. @ ambient	170mA/switch

**TYPICAL RF CHARACTERISTICS**

Frequency	DC-6 GHz	6-12 GHz	12-18 GHz	18-26.5 GHz	26.5-34 GHz* (40 Option)	34-40 GHz* (40 Option)
Insertion Loss, dB, typ.	0.20	0.40	0.50	0.90	1.00	1.50
Isolation, dB, typ..	70	60	60	50	50	50
VSWR, typ.	1.25:1	1.40:1	1.50:1	1.80:1	1.90:1	2.00:1

For specific RF performance data please refer to Coax Switch Part number list in Glossary (page 5)

# Series RF121 / GRF121

SPDT Magnetic-Latching  
Up to DC-18GHz RF Relay  
Signal Integrity up to 40Gbps

## Series GRF121 Electromechanical Relays

The ultraminiature GRF121 relay is designed to provide a practical surface-mount switching solution with RF performance and repeatability to 18GHz. The GRF121 improves on Teledyne Relays' heritage of miniature RF relays by incorporating a precision transmission line structure in the internal construction of the contact system. GRF121 relays feature a unique ground shield to facilitate surface mounting and to extend the frequency range when compared to through-hole solutions.

- Broader bandwidth (DC - 18GHz)
- Excellent Signal integrity up to 40Gbps
- Hermetically Sealed
- High Resistance to ESD
- Metal Enclosure for EMI shielding
- High Repeatability
- 3 Million Cycle Life

Relay Type	SPDT Magnetic-Latching
Frequency Range	RF121 = DC - 12 GHz GRF121 = DC - 18 GHz
Bit Rate	RF121 = 20 Gbps GRF121 = 40 Gbps
Mounting	RF = Thru-hole GRF = Surface-Mount (Stub)
Available Coil Voltages	5V: Coil Resistance ( $\Omega$ ) = 61 12V: Coil Resistance ( $\Omega$ ) = 500
Temperature	Storage: $-65^{\circ}\text{C}$ to $+125^{\circ}\text{C}$ Operating: $-55^{\circ}\text{C}$ to $+85^{\circ}\text{C}$

Part No.	Typical RF Performance			
	Frequency (GHz)	VSWR (max)	Isolation (dB)	Insertion Loss (dB) (max)
 <b>RF121</b>	DC - 4	1.3 : 1	55	0.25
	4 - 8	1.50 : 1	50	0.45
	8 - 12	2.0 : 1	40	1.35
 <b>GRF121</b>	DC - 4	1.1 : 1	65	0.2
	4 - 8	1.20 : 1	50	0.2
	8 - 12	1.35 : 1	40	0.5
	12 - 16	2.0 : 1	30	0.95
	16 - 18	2.3 : 1	30	1.1

RF121 : 20 Gbps

Bit Rate	Eye Height	Eye Width	Jitter <sub>p,p</sub>
20 Gbps	360 mV	40.3 ps	6.93 ps

### PATTERN GENERATOR SETTINGS

- 20 Gbps Random Pulse Pattern Generator
- $2^{31} - 1$  PRBS signal
- PRBS output of 500 mV<sub>p,p</sub> (nominal)
- RF PCB effect (negligible) not removed from measurement
- Data shown is typical of both contacts

GRF121 : 40 Gbps

Bit Rate	Eye Height	Eye Width	Jitter <sub>p,p</sub>
40 Gbps	95 mV	13.34 ps	8.73 ps

### PATTERN GENERATOR SETTINGS

- 40 Gbps Random Pulse Pattern Generator
- $2^{31} - 1$  PRBS signal
- PRBS output of 500 mV<sub>p,p</sub> (nominal)
- RF PCB effect (negligible) not removed from measurement
- Data shown is typical of both poles

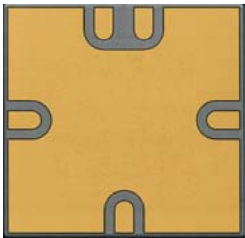

**Description**

The InP1012 is a highly compact, reflective SPDT Active RF switch, manufactured using Teledyne’s high speed, low-loss InP HEMT process. The switch die is packaged in a low-loss, surface mount package, with a small form factor:3mm(L) x 3mm(W) x 1mm(H). It supports a wide frequency range from DC to 60 GHz, and delivers low insertion loss, fast switching time, and good isolation-making this switch ideal for test and measurement, microwave communications, and radar applications. The unique construction features and manufacturing techniques provide excellent robustness to environmental extremes and overall high reliability

**Features**

- DC - 60GHz bandwidth
- High digital bandwidth, greater than 40Gbps
- -65°C to 125°C operating temperature
- Low insertion loss
- Very fast switching time of less than 100ns

Frequency Range
DC - 60 GHz
Bit Rate
40+ Gbps
Operate Time
60-100ns
Enclosure
Low-Loss Surface Mount Package
Dimensions
3mm (L) x 3mm (W) x 1mm (H)
Temperature
Operating: -65°C to +125°C

Part No.	Typical RF Performance			
	Frequency	Insertion Loss (dB)	Isolation (dB)	Return Loss (dB)
 <p><b>InP1012</b></p>	DC	2.0	---	---
	10kHz	0.9	67	---
	100 MHz	1.2	60	23
	6 GHz	1.6	37	21

- Data amplitude of 500mVpp

**OUTLINE DIMENSIONS**

**Teledyne has over 50 years of experience in developing a wide spectrum of custom solutions.**

**Experienced in Custom Hybrid Solutions**

Teledyne Relays is a leading manufacturer with the capability of providing build-to-print solutions on hybrid microcircuits devices. Our current products portfolio includes solid state power controllers, DC/DC converters, high current drivers, digital-analog converters, activator control hybrids, deflection amplifiers, base drivers, custom designed multi-layers thick-film/thin film substrates and many more...

With over 50 years of heritage in serving the space, aerospace, and defense markets, Teledyne continues to uphold the same standards and commitment to excellence. Our optimized solutions are supported by teams of engineers and manufacturing personnel with wide ranging experiences in developing products deployed in highly demanding applications, such as electrical power systems, radar receivers, and stores management solutions, for ground or aerial defense platforms.

Teledyne is accredited by Defense Logistics Agency (DLA) in accordance with MIL-PRF-38534, Class H and Class G Qualified Manufacturers List (QML). Since 2014 Teledyne has successfully launched over twenty hybrids into production for our customers. We welcome opportunities to partner with our customers to provide customized solutions to your hybrid needs. Our typical custom solution development cycle is as follows:

Teledyne Relays offers electromechanical relays for various markets?

## RF RELAYS

- Signal Integrity up to 40Gbps
- DC - 18GHz
- Surface-Mount
- DPDT, SPDT, 4PST and Loopback Relays

## MILITARY GRADE RELAYS

- Built and tested to meet MIL-PRF-39016
- Built and tested to meet MIL-PRF-28776
- Built-in Diodes, Transistor Driver and CMOS
- Low Power coils

## TELEDYNE ESTABLISHED RELIABILITY RELAYS

- Fully defined product requirements and screening levels
- Spacer/Spreader pad options not allowed by military specifications
- Reduced lead time and cost vs Military Grade

## HIGH PERFORMANCE RELAYS

- -65 °C to +200 °C
- Shock up to 4,000 g's
- Vibration up to 380 g's
- Non-Latching & Magnetic-Latching

## COMMERCIAL RELAYS

- Standard electrical tests at 25 °C
- "Low cost" switching solutions
- Surface-Mount
- Short lead times

## Teledyne Relays offers Commercial/Industrial Solid State Relays?

### SINGLE PHASE AC SOLID STATE RELAYS

- Up to 690Vac, 125A
- Input & Output Protection
- Chassis, DIN Rail and PCB Mount
- Zero-Cross & Random Switching
- Touch-Proof Covers

### DUAL-PHASE AC SOLID STATE RELAYS

- Up to 600Vac, 50A
- Output Protection
- Chassis and DIN Rail
- Zero-Cross & Random Switching
- Touch-Proof Covers

### 3 & 4 PHASE SOLID STATE RELAYS

- Up to 600Vac, 75A
- Output Protection
- Chassis and DIN Rail
- Zero-Cross & Random Switching
- DC & AC Control

### DC SOLID STATE RELAYS

- Up to 1400Vdc, 100A
- Output Protection
- Chassis, DIN Rail and PCB Mount
- IGBT and MOSFET
- Touch-Proof Covers

### SOFT START MOTOR CONTROLLERS AND MOTOR REVERSERS

- Up to 26kW, 480Vac
- Star & Delta Configurations
- DIN Rail
- Output Protection
- Built-in Diagnostics and Self Test

# Did you know...

## Teledyne Relays offers Military Solid State Relays?

### DC SOLID STATE RELAYS

- Meet MIL-PRF-28750
- Tested Per MIL-STD-704
- Silicon Carbide MOSFET
- Up to 250Vdc, 1A
- Chassis and PCB Mount
- Short-Circuit Protection
- Plastic and Hermetically Sealed

### BI-DIRECTIONAL/AC SOLID STATE RELAYS

- Meet MIL-PRF-28750
- Tested Per MIL-STD-704
- Up to 250Vac, 25A
- Chassis and PCB Mount
- Short-Circuit Protection
- Plastic and Hermetically Sealed

### COMMERCIAL, LOW POWER, I/O MODULES

- Up to 250Vac, 10A
- Short-Circuit Protection
- Chassis and PCB Mount
- Zero-Cross & Random Switching
- Low Off-State Leakage Current

### SILICON CARBIDE TECHNOLOGY

- Up to 270Vdc, 20 A
- Meet MIL-PRF-28750
- Tested Per MIL-STD-704
- Low ON resistance
- Low Profile Hermetic Package
- Options: Trip Status, Switch Status
- Short Circuit Protection

# Did you know...

**Teledyne Coax Switches offers coaxial switch matrices for ATE, Radar, Filter Switching, Airborne Surveillance Systems, Etc.?**

## MINI MATRICES

- Remote Control via USB and/or Ethernet
- GUI controllable
- Accepts ASCII code
- Available in 18, 26.5 and 40 GHz
- SPDT, Transfer and Multi-throw configurations

## MULTIPLEXOR/FANOUT SWITCH MATRICES

- Up to 1x1024 Switch Matrix
- SMA, mini-SMB, TNC & N Connectors
- Failsafe, Latching or Normally Open Configurations
- Switching Systems for 50 Ω & 75 Ω applications

## MIMO/BLOCKING AND MIMO SINGLE CONNECTION SWITCH MATRICES

- Up to 1x1024 Switch Matrix
- SMA, mini-SMB, TNC & N Connectors
- RS-232, TTL, USB, GPIB, TTL, Ethernet Control
- 1 Million Cycles
- Failsafe & Latching

## CUSTOMIZED SWITCH MATRICES

- EMI/RFI
- Transient Suppression
- Ballistic Shock Fatigue
- Crash Load
- Altitude
