

## Features

- Formerly a **KEKOVARICON** product
- Five model sizes available - 7, 10, 14, 20 and 23 mm
- Broad range of current and energy handling capabilities
- 60 to 550 V<sub>rms</sub> AC voltage range; higher voltages available upon request
- 85 to 745 Vdc DC operating voltage range
- Available in tape and reel packaging for automatic pick-and-place (7-20 mm)
- RoHS compliant\*

## CVQ Series – Extended Medium Voltage Disc Varistors

### General Information

The CVQ series of transient surge suppressors is the extended version of CV series disc shaped varistors. The CVQ series consists of 7 mm, 10 mm, 14 mm, 20 mm and 23 mm sized varistors with extremely high current and energy capabilities. This series provides an increased level of protection for the transients expected in telecommunication and AC power networks. The AC operating voltage of these varistors ranges from 60 V to 550 V.

### Absolute Maximum Ratings

Parameter	Value	Units
<b>Continuous:</b>		
Steady State Applied Voltage		
DC Voltage Range (V <sub>dc</sub> )	85 to 745	V
AC Voltage Range (V <sub>rms</sub> )	60 to 550	V
<b>Transient:</b>		
Peak Single Pulse Surge Current, 8/20 μs Waveform (I <sub>max</sub> )	1750 to 15000	A
Single Pulse Surge Energy, 10/1000 μs Waveform (W <sub>max</sub> )	9 to 627	J
Operating Ambient Temperature	-40 to +85	°C
Storage Temperature Range	-40 to +125	°C
Threshold Voltage Temperature Coefficient	< +0.05	%/°C
Insulation Resistance	> 1	GΩ
Isolation Voltage Capability	> 2.5	kV
Response Time	< 25	ns
Climatic Category	40 / 85 / 56	

### Additional Information

Click these links for more information:

### Agency Recognition

Standard	UL 1449
File Number	<a href="#">E313168**</a>

\*\*Not all rated voltages are UL recognized; check the file for details.

# CVQ Series – Extended Medium Voltage Disc Varistors

## How to Order

CVQ150K20RL1yy

Series Designator \_\_\_\_\_  
 CVQ = CVQ Series

Max. Continuous Operating Voltage ( $V_{rms}$ ) \_\_\_\_\_  
 $V_n$  Tolerance \_\_\_\_\_  
 K =  $\pm 10\%$

Model Size \_\_\_\_\_  
 7 = 7 mm      20 = 20 mm  
 10 = 10 mm    23 = 23 mm  
 14 = 14 mm

Packaging \_\_\_\_\_  
 R = Reel\*  
 B = Bulk  
 A = Ammo Pack (Available only upon special request)\*  
 \*Reel and Ammo Pack options not available for Model Sizes 20 and 23.

Lead Style \_\_\_\_\_  
 L1 = Straight Leads  
 L5 = Crimped Leads

Special Parameters \_\_\_\_\_  
 yy = Unique two digit suffix is assigned to each customer requesting special parameters.  
 Please contact Bourns for more information.

## Instructions for Creating Orderable Part Number:

- 1) Start with base part number in characteristics table  
 (example: CVQ150K20).
- 2) Add Packaging: R  
 (example part number becomes CVQ150K20R).
- 3) Add Lead Style: L1  
 (example part number becomes CVQ150K20RL1).
- 4) Part number can have no spaces or lower case letters.

## Pulse Rating Curves - Protection level with worst-case condition in the tolerance region

### Model Size 7 - (CVQ 60 ~ CVQ 300)

Specifications are subject to change without notice.  
 Users should verify actual device performance in their specific applications.  
 The products described herein and this document are subject to specific legal disclaimers as set forth on the last page of this document, and at [www.bourns.com/docs/legal/disclaimer.pdf](http://www.bourns.com/docs/legal/disclaimer.pdf).

## Assembly Recommendations for Through-Hole Components

Very often before soldering through-hole components, their leads get bent. It is important not to damage the components during lead bending. Damage incurred during bending is cracks in epoxy parts, which can lead to increased humidity sensitivity of a component and, consequentially, a shorter lifetime.

In order to avoid epoxy damage, it is necessary to:

- fix the most sensitive point (epoxy parts) of a component body
- bend the wire at least 2 mm below the end of epoxy parts

Other potential damage to a component which can lead to component failure or a shorter lifetime is thermal shock during manual soldering with a soldering iron. This can occur when a soldering iron is placed too close to one point of the component body and it happens most often when the solder joint is too close to the varistor body.

### Resistance to Soldering Heat

In the case of automatic wave soldering, it is important to provide sufficient resistance to soldering heat. In order to prevent any potential problems, internal standards were introduced for testing the resistance to soldering heat of through-hole components: 300 °C, 10 seconds.

### Pb-free Wave Soldering Profile Recommendations

Recommended soldering profiles for all above components are in accordance with JEDEC standard curves (J-STD-020D) and are, therefore, compatible with the Pb-free process.

### Lead-free Wave Soldering Profile - Pb-free wave profile requirements for soldering heat resistance of components

Parameter	Symbol	Specification
Preheating temperature gradient		4 °C/sec. max.
Preheating time	$t_1$	2 to 5 min.
Min. preheating temperature	$T_1$	130 °C
Max. preheating temperature	$T_2$	180 °C
Melting temperature/point	$T_{meltv}$	217 °C
Time in wave soldering phase ( $w_1+w_2$ )	$t_{w1+w2}$	10 sec.
Max. wave temperature ( $w_1+w_2$ )	$T_s$	265 °C +0/-5 °C
Cooling temperature gradient		6° C/sec. max.
Temperature jump from $T_2$ to $T_3$ ( $w_1$ )	$T_{3(w1)} - T_2$	120 °C max
Time from 25 °C to $T_3$ (wave temperature)		8 min. max.

Specifications are subject to change without notice.

Users should verify actual device performance in their specific applications.

The products described herein and this document are subject to specific legal disclaimers as set forth on the last page of this document, and at [www.bourns.com/docs/legal/disclaimer.pdf](http://www.bourns.com/docs/legal/disclaimer.pdf).

# CVQ Series – Extended Medium Voltage Disc Varistors

## Reliability Testing Procedures

Varistor test procedures comply with CECC 42200, IEC 1051-1/2 (and AEC-Q200, if applicable). Test results are available upon customer request. Special tests can be performed upon customer request.

Reliability Parameter	Test	Tested According to	Condition to be Satisfied after Testing
<b>AC/DC Bias Reliability</b>	AC/DC Life Test	CECC 42200, Test 4.20 or IEC 1051-1, Test 4.20, AEC-Q200 Test 8 - 1000 h at UCT	$ \delta V_N (1 \text{ mA})  < 10 \%$
<b>Pulse Current Capability</b>	$I_{\text{max}} 8/20 \mu\text{s}$	CECC 42200, Test C 2.1 or IEC 1051-1, Test 4.5 10 pulses in the same direction at 2 pulses per minute at maximum peak current for 10 pulses	$ \delta V_N (1 \text{ mA})  < 10 \%$ no visible damage
<b>Pulse Energy Capability</b>	$W_{\text{max}} 10/1000 \mu\text{s}$	CECC 42200, Test C 2.1 or IEC 1051-1, Test 4.5 10 pulses in the same direction at 1 pulse every 2 minutes at maximum peak current for 10 pulses	$ \delta V_N (1 \text{ mA})  < 10 \%$ no visible damage
<b>WLD Capability</b>	WLD x 10	ISO 7637, Test pulse 5, 10 pulses at rate of 1 per minute	$ \delta V_N (1 \text{ mA})  < 15 \%$ no visible damage
<b>V<sub>jump</sub> Capability</b>	$V_{\text{jump}} 5 \text{ min.}$	Increase of supply voltage to $V \geq V_{\text{jump}}$ for 1 minute	$ \delta V_N (1 \text{ mA})  < 15 \%$ no visible damage
<b>Environmental and Storage Reliability</b>	Climatic Sequence	CECC 42200, Test 4.16 or IEC 1051-1, Test 4.17 a) Dry heat, 16h, UCT, Test Ba, IEC 68-2-2 b) Damp heat, cyclic, the first cycle: 55 °C, 93 % RH, 24 h, Test Db 68-2-4 c) Cold, LCT, 2 h, Test Aa, IEC 68-2-1 d) Damp heat cyclic, remaining 5 cycles: 55 °C, 93 % RH, 24 h/cycle, Test Bd, IEC 68-2-30	$ \delta V_N (1 \text{ mA})  < 10 \%$
	Thermal Shock	CECC 42200, Test 4.12, Test Na, IEC 68-2-14, AEC-Q200 Test 16, 5	$ \delta V_N (1 \text{ mA})  < 10 \%$ no visible damage
	Steady State Damp Heat	CECC 42200, Test 4.17, Test Ca, IEC 68-2-3, AEC-Q200 Test 6, 56 days, 40 °C, 93 % RH, AEC-Q200 Test 7: Bias, Rh, T all at 85.	$ \delta V_N (1 \text{ mA})  < 10 \%$
	Storage Test	IEC 68-2-2, Test Ba, AEC-Q200 Test 3, 1000 h at maximum storage temperature	$ \delta V_N (1 \text{ mA})  < 5 \%$

## Reliability Testing Procedures (Continued)

Reliability Parameter	Test	Tested According to	Condition to be Satisfied after Testing
<b>Mechanical Reliability</b>	Solderability	CECC 42200, Test 4.10.1, Test Ta, IEC 68-2-20 solder bath and reflow method	Solderable at shipment and after 2 years of storage, criteria: >95% must be covered by solder for reflow meniscus
	Resistance to Soldering Heat	CECC 42200, Test 4.10.2, Test Tb, IEC 68-2-20 solder bath and reflow method	$ ΔV_n (1 mA)  < 5 %$
	Terminal Strength	JIS-C-6429, App. 1, 18N for 60 sec. - same for AEC-Q200 Test 22	No visual damage
	Board Flex	JIS-C-6429, App. 2, 2 mm min. AEC-Q200 test 21 - Board flex: 2 mm flex min.	$ ΔV_n (1 mA)  < 2 %$ No visible damage
	Vibration	CECC 42200, Test 4.15, Test Fc, IEC 68-2-6, AEC-Q200 Test 14 Frequency range 10 to 55 Hz (AEC: 10-2000 Hz) Amplitude 0.75 m/s <sup>2</sup> or 98 m/s <sup>2</sup> (AEC: 5 g for 20 minutes) Total duration 6 h (3x2 h) (AEC: 12 cycles each of 3 directions) Waveshape - half sine	$ ΔV_n (1 mA)  < 2 %$ No visible damage
	Mechanical Shock	CECC 42200, Test 4.14, Test Ea, IEC 68-2-27, AEC-Q200 Test 13. Acceleration = 490 m/s <sup>2</sup> (AEC: MIL-STD-202-Method 213), Pulse duration = 11 ms, Waveshape - half sine; Number of shocks = 3x6	$ ΔV_n (1 mA)  < 10 %$ No visible damage
<b>Electrical Transient Conduction</b>	ISO-7637-1 Pulses	AEC-Q200 Test 30: Test pulses 1 to 3. Also other pulses - freestyle.	$ ΔV_n (1 mA)  < 10 %$ No visible damage

## Terminology

Term	Symbol	Definition
Rated AC Voltage .....	$V_{rms}$	Maximum continuous sinusoidal AC voltage (<5 % total harmonic distortion) which may be applied to the component under continuous operation conditions at +25 °C
Rated DC Voltage.....	$V_{dc}$	Maximum continuous DC voltage (<5 % ripple) which may be applied to the component under continuous operating conditions at +25 °C
Supply Voltage.....	$V$	The voltage by which the system is designated and to which certain operating characteristics of the system are referred; $V_{rms} = 1.1 \times V$
Leakage Current.....	$I_{dc}$	The current passing through the varistor at $V_{dc}$ and at +25 ° or at any other specified temperature
Varistor Voltage .....	$V_n$	Voltage across the varistor measured at a given reference current ( $I_n$ )
Reference Current.....	$I_n$	Reference current = 1 mA DC
Clamping Voltage .....	$V_c$	The peak voltage developed across the varistor under standard atmospheric conditions, when passing an 8/20 $\mu s$ class current pulse
Protection Level		
Class Current.....	$I_c$	A peak value of current which is 1/10 of the maximum peak current for 100 pulses at two per minute for the 8/20 $\mu s$ pulse
Voltage Clamping Ratio.....	$V_c/V_{app}$	A figure of merit measure of the varistor clamping effectiveness as defined by the symbols $V_c/V_{app}$ , where ( $V_{app} = V_{rms}$ or $V_{dc}$ )
Jump Start Transient .....	$V_{jump}$	The jump start transient results from the temporary application of an overvoltage in excess of the rated battery voltage. The circuit power supply may be subjected to a temporary overvoltage condition due to the voltage regulation failing or it may be deliberately generated when it becomes necessary to boost start the car.
Rated Single Pulse .....	$W_{max}$	Energy which may be dissipated for a single 10/1000 $\mu s$ pulse of a maximum rated current, with rated AC voltage or rated DC voltage also applied, without causing device failure
Transient Energy		
Load Dump Transient .....	WLD	Load Dump is a transient which occurs in automotive environments. It is an exponentially decaying positive voltage which occurs in the event of a battery disconnect while the alternator is still generating charging current with other loads remaining on the alternator circuit at the time of battery disconnect.
Rated Peak Single Pulse.....	$I_{max}$	Maximum peak current which may be applied for a single 8/20 $\mu s$ pulse, with rated line voltage also applied, without causing device failure
Transient Current		
Rated Transient Average .....	$P$	Maximum average power which may be dissipated due to a group of pulses occurring within a specified isolated time period, without causing device failure at 25 °C
Power Dissipation		
Capacitance.....	$C$	Capacitance between two terminals of the varistor measured @ 1 kHz
Non-linearity Exponent .....	$\alpha$	A measure of varistor nonlinearity between two given operating currents, $I_n$ and $I_1$ as described by $I = k V \exp(a)$ , where: <ul style="list-style-type: none"> <li>- k is a device constant,</li> <li>- <math>I_1 &lt; I &lt; I_n</math> and</li> <li>- <math>a \log(I_1/I_n) / \log(V_1/V_n) = 1 / \log(V_1/V_n)</math>, where: <ul style="list-style-type: none"> <li>- <math>I_r</math> is reference current (1 mA) and <math>V_n</math> is varistor voltage</li> <li>- <math>I_1 = 10 I_n</math>, <math>V_1</math> is the voltage measured at <math>I_1</math></li> </ul> </li> </ul>
Response Time.....	$t_r$	The time lag between application of a surge and varistor's "turn-on" conduction action
Varistor Voltage Temperature .....	TC	$(V_n @ 85 °C - V_n @ 25 °C) / (V_n @ 25 °C) \times 60 °C \times 100$
Coefficient		
Insulation Resistance .....	IR	Minimum resistance between shorted terminals and varistor surface
Isolation Voltage .....		The maximum peak voltage which may be applied under continuous operating conditions between the varistor terminations and any conducting mounting surface
Operating Temperature .....		The range of ambient temperature for which the varistor is designed to operate continuously as defined by the temperature limits of its climatic category
Climatic Category .....	LCT/UCT/DHD	LCT & UCT = Lower and Upper Category Temperature - the minimum and maximum ambient temperatures for which a varistor has been designed to operate continuously. DHD = Dump Heat Test Duration
Storage Temperature.....		Storage temperature range without voltage applied
Current/Energy Derating.....		Derating of maximum values when operated above UCT
