

LTC3624
**High Efficiency Synchronous
 Step-Down Regulator with
 Ultralow Quiescent Current**
DESCRIPTION

Demonstration circuit 2359A is a synchronous step-down regulator using **LTC[®]3624HMSE** monolithic buck regulator. The DC2359A operates from an input voltage range of 2.7V to 17V and provides an adjustable output voltage range from 1.2V to 5V ($V_{OUT} < V_{IN}$) at 2A of continuous output current. A user-selectable mode input is provided with the following options: Burst Mode[®] operation provides the highest efficiency at light loads, while Pulse-Skipping mode (PS) provides the lowest output voltage ripples. Forced Continuous mode (FC) is also available for low EMI and noise interference.

The MODE/SYNC pin can also be used to synchronize the switching frequency to an external clock signal. The switching frequency is fixed at 1MHz with a $\pm 40\%$ sync capture range.

The regulator features ultralow quiescent current and high efficiencies over a wide V_{IN} and V_{OUT} range. DC2359A

uses very low profile surface mount components and all ceramic output capacitor solutions. The compact 12-lead MSE (5mm \times 4mm \times 1mm) thermally enhanced package makes LTC3624HMSE an excellent choice for battery powered equipment, emergency radio and general purpose step-down power supplies. The H-Grade version is specified over an operating junction temperature range of -40°C to 150°C , typically required for automotive, industrial and military applications that are subject to high ambient temperatures.

It is recommended to read the data sheet and demo manual of LTC3624 prior using or making any changes to DC2359A.

Design files for this circuit board are available at <http://www.linear.com/demo/DC2359A>

PERFORMANCE SUMMARY Specifications are at $T_A = 25^{\circ}\text{C}$

PARAMETER	CONDITIONS	VALUE
Input Voltage Range		2.7V to 17V
On Board User Selectable Output Voltages	$V_{IN} = 2.7\text{V to }17\text{V}$, $I_{OUT} = 2\text{A}$ ($V_{OUT} < V_{IN}$)	1.2V, 1.8V, 2.5V, 3.3V and 5V
Default Mode Setting	JP2	Burst Mode ("BM" on Circuit Board)
Fixed Switching Frequency	Internally Programmed Frequency	1MHz $\pm 20\%$
Default Output Voltage V_{OUT}	$V_{IN} = 12\text{V}$, $V_{OUT} = 5\text{V}$, $I_{OUT} = 0\text{A to }2\text{A}$	5V $\pm 2\%$
Maximum Continuous Output Current I_{OUT}		2A
Output Voltage Ripples (Peak to Peak)	$V_{IN} = 12\text{V}$, $V_{OUT} = 5\text{V}$, $I_{OUT} = 2\text{A}$	8.8mV (Figure 7)
Load Transient Response	$V_{IN} = 12\text{V}$, $V_{OUT} = 5\text{V}$, $I_{OUT_STEP} = 1\text{A to }2\text{A}$, $C_{OUT} = 1 \times 47\mu\text{F}$	219mV (Figure 8)
Thermal Performance	$V_{IN} = 12\text{V}$, $V_{OUT} = 5\text{V}$, $I_{OUT} = 2\text{A}$, $f_{SW} = 1\text{MHz}$, $T_A = 25^{\circ}\text{C}$	Figure 9
Efficiency	$V_{IN} = 12\text{V}$, $V_{OUT} = 5\text{V}$, $I_{OUT} = 2\text{A}$, BM, $f_{SW} = 1\text{MHz}$, $T_A = 25^{\circ}\text{C}$	89.7% (Figure 3)

QUICK START PROCEDURE

Demonstration circuit 2359A is easy to set up to evaluate the performance of the LTC3624HMSE. Please refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

1. Place jumpers in the following positions for a typical 5V output application:

Table 1. Typical 5V Output Voltage Jumper Selection

JP1	JP2	JP7
RUN	MODE/SYNC	V _{OUT}
ON	BM	5.0V

2. With power off, connect the input power supply at V_{IN} (E1) and GND (E2)
3. Connect the Load between V_{OUT} (E8) and GND (E9). Preset the load to 0A.
4. Connect the DMMs to the input and output to monitor the input voltage and output voltage.
5. Turn on the power supply at the input. The RUN pin jumper should be at "ON" position. Measure and make sure the input supply voltage is 12V. The output voltage should be 5V ±2%.
6. Once the input and output voltages are properly established, adjust the loads within the operating range (0A to 2A Max) and observe the output voltage regulation, output voltage ripple, switch node waveform and other parameters. Refer to Figure 2 for proper output voltage ripple measurement.

7. To select other output voltages, use the on board user selectable output voltage jumpers. Shutting down LTC3624HMSE by placing RUN pin jumper (JP1) to the OFF position or turn off the input power supply. Refer to the following table (Table 2) for the output voltage selection and repeat step 2 to 6.

Table 2. Output Voltage Jumper Selection

JP3	JP4	JP5	JP6	JP7	JP8*
1.2V	1.8V	2.5V	3.3V	5V	User Select

*If JP8 is selected, R6 needs to be calculated and inserted to obtain the desired output voltage.

NOTE 1: To measure the input/output voltage ripple properly, do not use the long ground lead on the oscilloscope probe. See Figure 2 for the proper scope probe technique. Short, stiff leads need to be soldered to the (+) and (-) terminals of an output capacitor. The probe's ground ring needs to touch the (-) lead and the probe tip needs to touch the (+) lead.

NOTE 2: The DC2359A can also be used to evaluate the LTC3624HMSE-2 (2.25MHz) by simply replacing U1 with the LTC3624HMSE-2 and changing inductor L1 to 1.5µH (Coilcraft XAL4020-152ME).
