

# DIGI REMOTE MANAGER

Configure, deploy and manage remote assets securely

Digi Remote Manager® (Digi RM) is the technology platform that brings networks to the next level, allowing networks — and the people who manage them — to work smarter. It transforms a multitude of dispersed IoT devices into a dynamic, intelligent network.

Now you can easily configure, deploy, monitor and manage hundreds or even thousands of mission-critical devices from a single point of command. Edit configurations,

update firmware, schedule and automate tasks — all from your desktop, tablet or phone.

You can also easily extend your network at scale with bi-directional, open integration and add intelligence to the edge with custom code, APIs and Python scripts. All the while, its software-defined security diligently safeguards your Digi ecosystem.

## Do more with less effort.

Auto-assimilate, update and deploy hundreds of devices with ease by putting Digi's exclusive drag-and-drop grouping technology to work for you. Scheduled operations allow you to use Digi RM to automate common management tasks on a single device or on a group of devices. Schedules can be run once or configured to recur.

## Gain valuable insight about the inner workings of your network.

The flexible Digi RM dashboard allows you to put your crucial information where you want it. A selection of pre-built reports with critical device health metrics can be customized to include the data you need most. Configure alerts for specified conditions, or trigger business processes based on events.

## Build and maintain an always-on, always-secure network.

Software-defined protection safeguards a secure network and alerts you if key settings go astray. Digi RM automatically maintains security by scanning and fixing any out-of-compliance device configurations in the group.

## Connect any device to any cloud platform.

Pre-configured APIs make it quicker and easier for users to access, connect and analyze data collected from devices — with no development required. Cloud connectors integrate device data with industry-leading, third-party analytics and visualization dashboard applications. Connecting is simple. For custom integrations, utilize the rich web service API.

## Digi Remote Manager Mobile App

Now it's even easier for users to register their devices via a QR code with the Digi RM mobile app. Once a device is registered in your customer account, you can set a custom configuration to automatically be applied using the Configuration Manager feature. View the overall health of your network as well as individual device status using the Digi RM mobile app.

### A Complete Solution

- ✓ Industry-leading cloud and edge tools for rapid device deployment, and easier asset management
- ✓ Automate mass firmware and software updates to enhance functionality, stay in compliance and scale your deployment
- ✓ Access data from edge devices that were previously out of reach
- ✓ Integrate device data through open APIs to gain deeper insights and control with third-party applications
- ✓ Monitor network, device and asset performance and security with bi-directional communications
- ✓ Receive real-time alerts and detailed reports on network health and device conditions
