

Features

- O-Ring Mount
- Up to -40°C to +125°C Operating Range
- Up to $\pm 0.1\%$ Pressure Non-Linearity
- Solid State Reliability
- Low Pressure

Applications

- Level Controls
- Tank Level Measurement
- OEM Equipment
- Corrosive Fluids and Gas Measurement Systems
- Flow Measurements

DP86

Differential Pressure Sensor

SPECIFICATIONS

- **316L SS**
- **Wet/Wet Differential**
- **Low Pressure**

The DP86 differential pressure sensor is a double-sided, media compatible, piezoresistive silicon pressure sensor packaged in a 316L stainless steel housing designed for O-ring mounting applications. The sensing package utilizes silicone oil to transfer pressure from the two 316L stainless steel diaphragms to a single sensing element.

The DP86 is designed for high performance, low pressure applications where differential pressure measurement is required. The stainless steel package makes it suitable for use in liquids and corrosive environments.

Please refer to the DP86 uncompensated, non-silicone oil, constant current and constant voltage (fittings and cable design) for more information on different features of the DP86.

Media Compatibility – Pressure Port

All fluids and gases compatible with 316L Stainless Steel & Nitrile

Notes

1. Measured at ambient pressure.
2. Best fit straight line
3. Over the temperature range -20°C to +85°C (0°C to 50°C for 1psi, 0°C to 70°C for 5psi) with respect to 25°C.
4. For high-end port, rated or 1000psi whichever is less; for low-end port, rated or 150psi whichever is less. The maximum pressure that can be applied without changing the transducer's performance or accuracy.
5. The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer.
6. Temperature range for cable and connector is -20°C to +105°C.
7. Between case and sensing element.
8. Load resistance to reduce measurement errors due to output loading.
9. At dry air.
10. Direct mechanical contact with diaphragm is prohibited. Diaphragm surface must remain free of defects (scratches, punctures, fingerprints, etc.) for device to operate properly. Caution is advised when handling parts with exposed diaphragms. Use protective cap whenever devices are not in use.
11. Shipping:
The Stainless Steel diaphragm is protected by a static dissipative cap, each unit is packaged individually in a 2.5" plastic vial with antistatic foam, cable assembly included in vial.
12. Marking:
Device is identified with model number with Pressure Range, Type, Lot Number, Serial Number and Date Code.
