Product Description

3-Phase relay for detection of incorrect mains voltage. Also detecting incorrect phase sequence and phase loss. This unit allows to stop incorrect power supply voltage when different from the desired one.
Power supply range from 208

to 480 VAC plus selection of the different possible nominal voltages. For mounting on DIN-rail. Housing 17.5 mm wide suitable both for back and front panel mounting.

Mode of Operation

DPA55 monitors its own 3-phase power supply. The relay operates when all the phases are present, the phase sequence is correct

and each phase-phase voltage is within the desired tolerance (± 10% or ± 15%).

Example 1
The relay monitors that the power supply is the correct one for the required equipment.

Example 2
The relay releases in case of incorrect phase sequence or when the voltage is outside the set limits.
