

MEAS HTU21D XPLAINED PRO BOARD

Digital Humidity
Digital Component Sensor (DCS) Development Tools

Performance

- ◆ 0% to 100% relative humidity range
- ◆ -40°C to 125°C temperature range
- ◆ Very low power consumption
- ◆ Operates from 1.5V to 3.6V
- ◆ Fast response time – 5 seconds typical
- ◆ Built-in heater for fast recovery from saturation
- ◆ Recovers fully from condensation
- ◆ Fast conversion time – 14ms typical

Features

- ◆ 20-pin Xplained Pro compatible connector
- ◆ I²C interface
- ◆ Xplained Pro Hardware identification Chip
- ◆ Atmel Studio 6 Project available for download
- ◆ µC C code available for download
- ◆ Selectable 8-12 bit resolution for humidity
- ◆ Selectable 12-14 bit resolution for temperature

The HTU21D Xplained Pro provides the necessary hardware to interface the HTU21D digital relative humidity and temperature sensor to any system that utilizes Xplained Pro compatible expansion ports configurable for I²C communication. The HTU21D sensor is a self-contained humidity and temperature sensor that is fully calibrated during manufacture. The sensor can operate from 1.5V to 3.6V, has selectable resolution, low battery detect, and checksum capability. The HTU21D has a low power stand-by mode for power-sensitive applications.

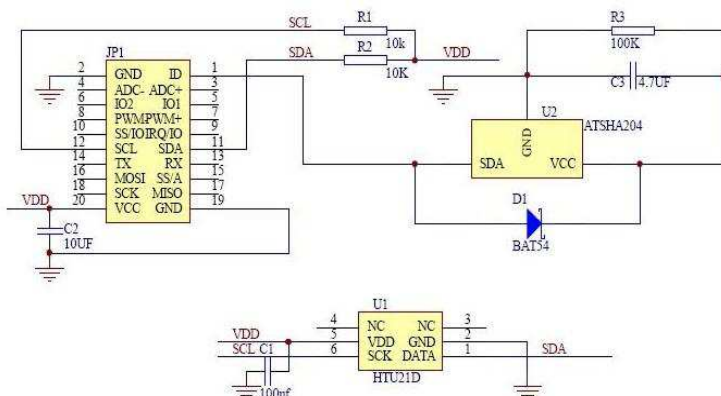

Refer to the HTU21D datasheet for detailed information regarding operation of the IC:

Specifications

- ◆ Measures relative humidity from 0% to 100%
- ◆ Measures temperature from -40°C to 125°C
- ◆ I²C communication
- ◆ Fully calibrated
- ◆ Fast response time
- ◆ Selectable resolution
- ◆ Very low power consumption

Schematic

Connector Pin Assignments (I²C Communications)

System Plug

Connector JP1					
Pin No.	Signal	Description	Pin No.	Signal	Description
1	ID	Hardware identification	11	SDA	TWI Serial Data
2	GND	Ground	12	SCL	TWI Serial Clock
3	N/C	Not Connected	13	N/C	Not Connected
4	N/C	Not Connected	14	N/C	Not Connected
5	N/C	Not Connected	15	N/C	Not Connected
6	N/C	Not Connected	16	N/C	Not Connected
7	N/C	Not Connected	17	N/C	Not Connected
8	N/C	Not Connected	18	N/C	Not Connected
9	N/C	Not Connected	19	GND	Ground
10	N/C	Not Connected	20	Vdd	Power Supply

Dimensions (mm)

Detailed Description

I²C Interface

The peripheral module can interface to the host being plugged directly into an Xplained Pro extension port (configured for I²C) through connector JP1.

External Control Signals

The IC operates as an I²C slave using the standard 2 wire I²C connection scheme. The IC is controlled either by the host (through the Xplained Pro connector). In cases where one or more of the SCL and SDA signals are driven from an external source, 10k resistors R1, R2 provide pull-up. However, this also increases the apparent load to the external driving source. If the external source is not capable of driving these loads (10k), they should be removed.

Reference Materials

The complete software kit is available for download at: [Link to HTU21D_CPROJ.zip](#)

Drivers & Software

Detailed example software and drivers are available that execute directly without modification on a number of development boards that support an integrated or synthesized microprocessor. The download contains several source files intended to accelerate customer evaluation and design. The source code is written in standard ANSI C format, and all development documentation including theory/operation, register description, and function prototypes are documented in the interface file.

Functions Summary

Enumerations	
enum	htu21_i2c_master_mode { htu21_i2c_hold, htu21_i2c_no_hold }
enum	htu21_status { htu21_status_ok, htu21_status_no_i2c_acknowledge, htu21_status_i2c_transfer_error, htu21_status_crc_error }
enum	htu21_resolution { htu21_resolution_t_14b_rh_12b = 0, htu21_resolution_t_12b_rh_8b, htu21_resolution_t_13b_rh_10b, htu21_resolution_t_11b_rh_11b }
enum	htu21_battery_status { htu21_battery_ok, htu21_battery_low }
enum	htu21_heater_status { htu21_heater_off, htu21_heater_on }
Functions	
void	htu21_init (void) Configures the SERCOM I2C master to be used with the HTU21 device.
bool	htu21_is_connected (void) Reset the HTU21 device.
enum htu21_status	htu21_reset (void) Reset the HTU21 device.
enum htu21_status	htu21_read_serial_number (uint64_t *) Reads the htu21 serial number.
enum htu21_status	htu21_set_resolution (enum htu21_resolution) Set temperature and humidity ADC resolution.
void	htu21_set_i2c_master_mode (enum htu21_i2c_master_mode) Set I2C master mode. This determines whether the program will hold while ADC is accessed or will wait some time.
enum htu21_status	htu21_read_temperature_and_relative_humidity (float *, float *) Reads the relative humidity value.
enum htu21_status	htu21_get_battery_status (enum htu21_battery_status *) Provide battery status.
enum htu21_status	htu21_enable_heater (void) Enable heater.
enum htu21_status	htu21_disable_heater (void) Disable heater.
enum htu21_status	htu21_get_heater_status (enum htu21_heater_status *) Get heater status.
float	htu21_compute_compensated_humidity (float, float) Returns result of compensated humidity.
float	htu21_compute_dew_point (float, float) Returns the computed dew point.

Project Setup

This project is based on ATSAM20J18 board with Measurement Specialties Xplained Pro extension board connected to EXT1 pad as shown on figure below.

Running the Application

1. Download the HTU21D Xplained Pro example package on [TE Website](#)
2. Decompress the archive file
3. Open the .cproj project file with Atmel Studio 6
4. You will now be able to build the HTU21D example project - 
5. Finally, run the build result on your Xplained Pro Board - 

Application Code

This section is intended to provide a basic example of functionality.

```
