TruStability™ Board Mount Pressure Sensors Standard Accuracy, Compensated/Amplified ±1.6 mbar to ±25 mbar | ±160 Pa to ±2.5 kPa | ±0.5 H₂O to ±10 inH₂O

DESCRIPTION

The TruStability™ DPR Series is a piezoresistive silicon pressure sensor offering a ratiometric analog output for reading pressure over the specified full scale pressure span and temperature range. These sensors are fully calibrated and temperature compensated for sensor offset, sensitivity, temperature effects, and non-linearity using an on-board Application Specific Integrated Circuit (ASIC). Calibrated output values for pressure are updated at approximately 1 kHz. The DPR Series is calibrated over the temperature range of -20°C to 70°C [-4°F to 185°F]. The sensor is calibrated for operation from a single power supply of 5.0 Vdc. These sensors measure differential or gage pressures. The robust and durable housing, with its industry-standard mounting configuration, along with a choice of flexible electrical terminations, is designed to withstand tough application environments. The sensors' internal diagnostic functions detect most internal failures, including burst sensors, and may reduce the need for redundant sensors in the system. The DPR Series is intended for use with non-corrosive, non-ionic gases, such as air and other dry gases. Custom calibrations, additional pressure ranges or options to extend the performance of these sensors to include non-corrosive, non-ionic liquids is possible. All products are designed and manufactured according to ISO 9001 standards.

POTENTIAL INDUSTRIAL APPLICATIONS

- Heating, ventilation, air conditioning (HVAC)
- Variable air volume (VAV) control
- Damper control and duct air flow
- Filter monitoring/clogged filter detection
- Modulated furnace controls
- Indoor air quality
- Leak detection
- Pneumatic control
- Burner control
- Fuel-to-air rationing
- Gas analyzers and meters
- Fume hoods and clean rooms

FEATURES

- Pressure range: ±1.6 mbar to ±25 mbar | ±160 Pa to ±2.5 kPa | ±0.5 inH₂O to ±10 inH₂O
- Pressure types: Differential and gage
- Total Error Band: As low as ±1.25 %FSS depending on pressure range (after auto zero)
- Accuracy: ±0.25 %FSS BFSL (Full Scale Span Best Fit Straight Line)
- Stable offset voltage
- Compensated temperature range: -20°C to 70°C [-4°F to 158°F]
- Low sensitivity to mounting orientation
- Output: analog voltage
- Overvoltage and reverse polarity protected
- Industry-standard mounting configuration and barbed ports
- Robust and durable package
- Internal diagnostic functions
- RoHS compliant

PORTFOLIO

Honeywell offers a variety of board mount pressure sensors for potential use in medical and industrial applications. Our categories of pressure sensor measurement include absolute, differential, gage or vacuum gage, with unamplified or amplified sensors and covering a wide pressure range. To view the entire product portfolio, [click here](#).

TRUSTABILITY™ BOARD MOUNT PRESSURE SENSORS, DPR SERIES

TABLE 1. ABSOLUTE MAXIMUM RATINGS¹

CHARACTERISTIC	MIN.	MAX.	UNIT
Supply voltage (V_{supply})	-5.0	12.0	Vdc
Voltage on output pin	-0.3	6.0	Vdc

¹Absolute maximum ratings are the extreme limits the device will withstand without damage.

TABLE 2. ENVIRONMENTAL SPECIFICATIONS

CHARACTERISTIC	PARAMETER
Humidity	0 %RH to 95 %RH, non-condensing
Vibration	15 g, 10 Hz to 2 kHz
Shock	100 g, 6 ms duration
ESD susceptibility	3 kV min, human body model
Life ¹	1 million pressure cycles minimum

¹ Life may vary depending on the specific application in which the sensor is utilized.

TABLE 3. WETTED MATERIALS¹

COMPONENT	MATERIAL	
	PORT 1 (PRESSURE PORT)	PORT 2 (REFERENCE PORT)
Ports and covers	high temperature polyamide	
Substrate	alumina ceramic	
Adhesives	epoxy, silicone	
O-Ring	silicone rubber	
Electronic components	ceramic, silicon, glass, solder	silicon, glass, gold

¹ Contact Honeywell Customer Service for detailed material information.

TABLE 4. SENSOR PRESSURE TYPES

PRESSURE TYPE	DESCRIPTION
Differential	Output is proportional to the difference between the pressures applied to each port (Port 1 - Port 2).
Gage	Output is proportional to the difference between applied pressure and atmospheric (ambient) pressure.

FIGURE 1. TEB COMPONENTS FOR TRUSTABILITY™ BOARD MOUNT PRESSURE SENSORS

TABLE 5. OPERATING SPECIFICATIONS

CHARACTERISTIC	MIN.	TYP.	MAX.	UNIT
Supply voltage (V_{supply}) ¹	4.75	5.0	5.25	Vdc
Minimum operating voltage	3.0	—	—	Vdc
Supply current	—	2.7	3.5	mA
Operating temperature range ²	-40 [-40]	—	85 [185]	°C [°F]
Compensated temperature range ³	-20 [-4]	—	70 [158]	°C [°F]
Startup time (power up to data ready)	—	—	5	ms
Response time	—	1	—	ms
Clipping limits:				
upper	—	—	97.5	% V_{supply}
lower	2.5	—	—	
Accuracy ⁴	—	—	±0.25	%FSS BFSL ⁶
Output resolution	—	0.033	—	%FSS ⁶
Orientation sensitivity (± 1 g) ⁵ :				
≤ 40 mbar 4 kPa 20 inH ₂ O	—	±0.1	—	%FSS ⁶
≤ 2.5 mbar 250 Pa 1 inH ₂ O	—	±0.2	—	

¹Ratiometricity of the sensor (the ability of the device output to scale to the supply voltage) is achieved within the specified operating voltage.

²**Operating temperature range:** The temperature range over which the sensor will produce an output proportional to pressure.

³**Compensated temperature range:** The temperature range over which the sensor will produce an output proportional to pressure within the specified performance limits.

⁴**Accuracy:** The maximum deviation in output from a Best Fit Straight Line (BFSL) fitted to the output measured over the pressure range. Includes all errors due to pressure non-linearity, pressure hysteresis, and non-repeatability.

⁵**Orientation sensitivity:** The maximum change in offset of the sensor due to a change in position or orientation relative to Earth's gravitational field.

⁶**Full Scale Span (FSS):** The algebraic difference between the output signal measured at the maximum (Pmax.) and minimum (Pmin.) limits of the pressure range. (See Figure 3 for ranges).

¹**Working Pressure:** The maximum pressure that may be applied to any port of the sensor in continuous use. This pressure may be outside the operating pressure range limits (Pmin. to Pmax.) in which case the sensor may not provide a valid output until pressure is returned to within the operating pressure range. Tested to 1 million cycles, minimum.

²**Overpressure:** The maximum pressure which may safely be applied to the product for it to remain in specification once pressure is returned to the operating pressure range. Exposure to higher pressures may cause permanent damage to the product. Unless otherwise specified, this applies to all available pressure ports at any temperature within the operating temperature range

³**Burst pressure:** The maximum pressure that may be applied to any port of the product without causing escape of pressure media. Product should not be expected to function after exposure to any pressure beyond the burst pressure.

⁴**Common mode pressure:** The maximum pressure that can be applied simultaneously to both ports of a differential pressure sensor without causing changes in specified performance.

⁵**Total Error Band:** The maximum deviation from the ideal transfer function over the entire compensated temperature and pressure range. Includes all errors due to offset, full scale span, pressure non-linearity, pressure hysteresis, repeatability, thermal effect on offset, thermal effect on span, and thermal hysteresis (see Figure 1).

⁶**Total Error Band after Auto-Zero:** The maximum deviation from the ideal transfer function over the entire compensated pressure range at a constant temperature and supply voltage for a minimum of 24 hours after an auto-zero operation. Includes all errors due to full scale span, pressure non-linearity, pressure hysteresis, and thermal effect on span.
