

# DS9488-GP8/DS9122x Evaluation System

# Multi-Device Programmer for 1-Wire and I2C Devices

## General Description

The DS9488-GP8 multi-device programmer for 1-Wire® and I2C devices simultaneously programs up to 8 devices that use the 1-Wire or I2C bus programming interface. A variety of socket adapters (DS9122 series) allows one programmer to support multiple IC types. Software plugins for every supported device are quickly and easily installed. LED status indicators immediately identify the pass/fail status of individual devices.

Configuration settings allow access to device-specific features such as memory protection, read/write permissions, authentication, etc. These can be store as a configuration profile and automatically loaded in subsequent programming sessions.

A USB interface connects the programmer to any computer. A convenient Windows® application allows for easy operation of the programmer.

Available socket adapters allow the DS9488-GP8 to program a variety of Maxim devices. The [Ordering Information](#) lists the socket adapters and the devices they support.

## Benefits and Features

- Programs Up to 8 Devices in a Single Session
- Multiple Devices Supported by One Programmer
- Socket Adapters Available for Most Devices
- Easily Add Support for New Devices
- Intuitive Windows Application Reduces Learning Time
- Standard USB Interface Connects to Any Computer
- Status LEDs Provide Immediate Pass/Fail Confirmation

## EV System Contents

- DS9488-GP8 programmer board
- USB A to USB Micro-B cable

## DS9488-GP8 Programmer

1-Wire is a registered trademark of Maxim Integrated Products, Inc.  
Windows is a registered trademark and registered service mark of Microsoft Corporation.

[Ordering Information](#) appears at end of data sheet.

## Setup

### Required Equipment

- Computer equipped with Windows and .NET Framework 4.5 or later
- DS9488-GP8 programmer board
- USB A to USB Micro-B cable
- One to eight socket adapters for the intended ICs
- One to eight ICs to be programmed

### Selecting Socket Adapters

One to eight socket adapters matching the IC packages must be purchased separately from Maxim before the programmer can be used. No socket adapters are included with the DS9488-GP8.

Most socket adapters program a single device at a time and take up one socket site. Dual socket adapters cover two socket sites, but each IC has a dedicated set of status LEDs on the PCB as shown in [Figure 1](#).

The socket adapters employ ESD-sensitive components. Observe safe ESD practices when handling the socket adapters.

Figure 1. Single and Dual IC Socket Adapters

### Application Installation

- 1) Download the latest version of the 1-Wire + I2C Multi-Device Programmer software from the [Maxim website](#). Note that a free account is required to download software from the [Maxim website](#).
- 2) While observing safe ESD practices, carefully remove the DS9488-GP8 board from its packaging. Inspect the board to ensure that no damage occurred during shipment.
- 3) Connect the DS9488-GP8 to a PC using the supplied USB cable. All LEDs on the DS9488-GP8 momentarily illuminate. One or more LEDs might remain on. The DS9488-GP8 must be connected during application installation.
- 4) Click on the setup application to begin installation.
- 5) Follow the installation instructions. If prompted, allow the DS9488-GP8 USB drivers to be installed.
- 6) Install the desired device-specific plugins for programming.

### Device-Specific Plugin Installation

Install device-specific plugins using the application.

- 1) Obtain the compressed plugin package from Maxim. The package name incorporates the name of the device. For example, DS2431 Programmer Plugin supports all packages of the DS2431.
- 2) Navigate to the **Application Setup** tab and click on the **Device Plugins** radio button. See [Figure 2](#).
- 3) Click on the **View Device Folder** button. Copy the package into the displayed folder.
- 4) Extract the .dll file and .pdf file for each device.
- 5) The plugins in this folder are automatically loaded when the application is launched. To load a plugin for immediate use, click on the **Load Device Plugin** button and select the corresponding .dll file.

Figure 2. Loaded Device Plugins

### Programming

If socket adapters have not been installed, remove power from the DS9488-GP8. Install the socket adapters, and reapply power.

The programming procedure has three steps:

- Device configuration
- Production file creation
- Programming

### Device Configuration

- 1) Navigate to the **Device Configuration** tab, shown in [Figure 3](#).
- 2) Select the device type to be programmed.
- 3) Configure the device-specific options. Information about the options can be found in the IC data sheet and also in .pdf files under the **Application Setup** tab, **View Device Help**.
- 4) If desired, click **Save As...** to record the configuration options.

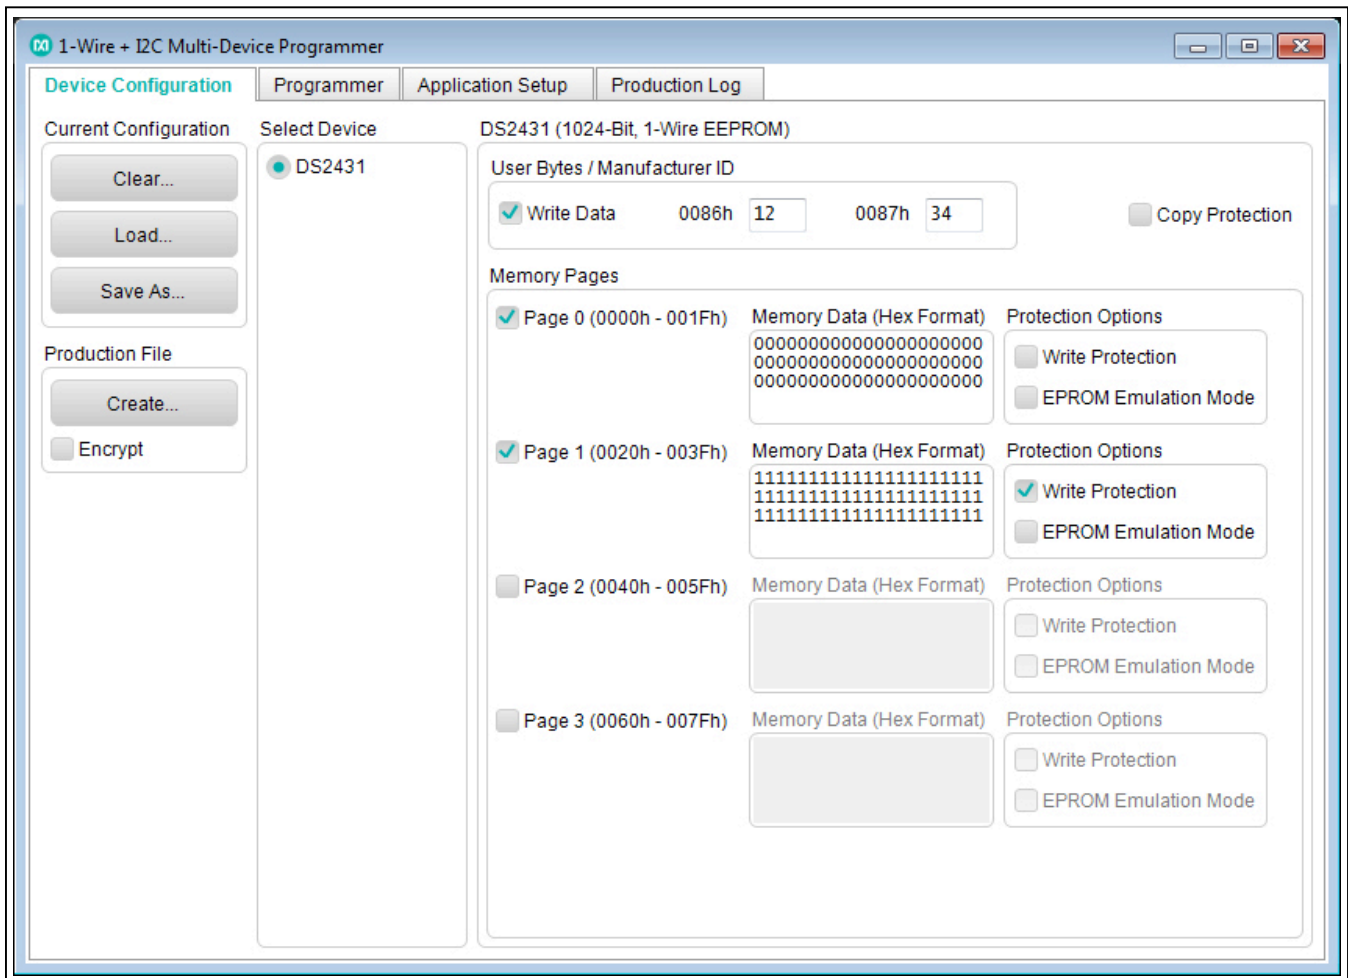

Figure 3. Device Configuration

### Production File Creation

The production file compiles all the configuration information and data into a single .xml file to be used by the programmer. After the device configuration has been input, press the **Production File Create** button and save the file to the folder defined in the **Application Setup, File Outputs** field.

The programmer offers the option to encrypt the production file for secure transfer between sites.

### Programming

- 1) Populate the desired sockets.
- 2) Navigate to the **Programmer** tab and select the active sockets as shown in [Figure 4](#). An error is generated during programming if an active socket is not populated with an IC.

- 3) Make sure the programmer is connected. If not, select **Auto Detect** under the **COM** button. Then click on the **Connect** button. The text below the **Connect** button indicates the programmer is connected.
- 4) Load a previously generated production file using the **Load Production File...** button.
- 5) Press either **Start** button on the programmer board or the **Start** button on the **Programmer** tab. The active LEDs on each socket board illuminate during programming and the progress bar advances.
- 6) When programming is complete, the ALL PASS indicator on the programmer is green if all devices programmed and verified correctly. The indicator is red if any of the devices fail verification.
- 7) The application keeps a running summary of the programming session. The cumulative results of each session are logged in the **Outputs** folder.

Figure 4. Programming Dialog

Figure 5 shows the application following a programming session in which sockets 1–5 are populated, and socket 4 failed post-programming verification. Figure 6 shows the programmer hardware after the same programming session with the pass/fail LEDs illuminated.

### Production File Encryption

The application provides the option to encrypt production files so they can be securely transferred between a master (configuration) system and one or more programming systems. The application generates an RSA public/private

key pair that is used for the encryption and decryption. Figure 7 illustrates the procedure for generating and installing encryption keys and creating and loading an encrypted production file. One key pair should be created by the master system and shared among all the programming systems.

The application loads both encrypted and nonencrypted production files if encryption keys are installed. Attempts to load an encrypted production file without first installing the encryption keys generate an error.

Figure 5. Example Session—GUI

# DS9488-GP8/DS9122x Evaluation System

# Multi-Device Programmer for 1-Wire and I2C Devices

Figure 6. Example Session—Programmer

Figure 7. Using Encrypted Production Files

### Key Generation and Installation

- 1) On the master system, navigate to **Generate Key Pair** under the **Application Setup** → **Encryption Keys** dialog. Two keys are generated in the **Keys** folder:
  - decryption\_private\_unsecured.key (unencrypted 1024-bit private key)
  - encryption\_public.key (unencrypted 1024-bit public key)
- 2) Install the public key on the master system by clicking on the **Install Encryption (Public) Key** button and selecting **encryption\_public.key**.
- 3) Securely transport decryption\_private\_unsecured.key to the keys directory of the programming system.
- 4) On the programming system navigate to the **Application Setup** → **Encryption Keys** dialog. Click **Install Decryption (Private) Key** and select **decryption\_private\_unsecured.key**. This creates a new encrypted private key (decryption\_private\_secured.key) using the Windows Data Protection API that is unique to the production computer.
- 5) Erase **privkey\_unencrypted.key** from the programming system.

### Producing Encrypted Production Files

- 1) Load or create a configuration through the **Device Configuration** tab.
- 2) Select the **Encrypt** option.
- 3) Press the **Create** button. The production file is encrypted using the public key and placed in the outputs folder.

### Troubleshooting

Programming failures can sometimes be caused by incorrect settings in the **Device Options** dialog. Refer to the appropriate data sheet for details of the configuration options.

The application keeps a detailed log of the programmer sessions, which can be used to troubleshoot problems. The log file is in .txt format and located in the **Outputs** folder.

Go to [support.maximintegrated.com/micro](http://support.maximintegrated.com/micro) for technical support.

4. Board Thickness: 62 mils +/- 10%
5. Layers: 2 (Top, Bottom)
6. Minimum Trace/Spacing: 10mil / 7mil
7. Copper Thickness: 1oz on all layers
8. Surface mount pads: 62
9. Soldermask: BLUE
10. Legend: White. Double-Sided. Non-Conductive Epoxy ink or Equiv.
11. Plating: Must be Lead free and RoHS Compliant
12. Finish: Most Economical Lead free and RoHS compliant process
13. Vendor Logo & date code: Allowed on bottom side only
14. Through holes: quantity 78, Slot holes 0, minimum size 13 mil
15. Tolerances:
  - Plated-through holes +/- 3 mil
  - Pattern to pattern +/- 6 mil
  - Legend to legend no preference
  - Soldermask to pattern +/- 6 mil
16. Electrical testing needed: YES

Part Number: 89-9122P#002	
Property of	Rev
maxim integrated™	1
Drill and Mechanical Layer	
Date: JUN 12 2015 Units in mils	

SIZE	QTY	SYM	PLATED	TOLERANCE
13	22	□	YES	+/- 0.003
22	12	▽	YES	+/- 0.003
39	40	○	YES	+/- 0.003
150	4	✱	NO	+/- 0.003

Notes:

1. Fabricate using provided gerber files per latest revision Of IPC-A-600 unless otherwise noted.
2. Material: RoHS Compliant FR-408 or similar laminate material
3. Board Dimensions: (2965 x 1850 mils)
4. Board Thickness: 62 mils +/- 10%
5. Layers: 2 (Top, Bottom)
6. Minimum Trace/Spacing: 10mil / 7mil
7. Copper Thickness: 1oz on all layers
8. Surface mount pads: 62
9. Soldermask: BLUE
10. Legend: White. Double-Sided. Non-Conductive Epoxy ink or Equiv.
11. Plating: Must be Lead free and RoHS Compliant
12. Finish: Most Economical Lead free and RoHS compliant process
13. Vendor Logo & date code: Allowed on bottom side only
14. Through holes: quantity 78, Slot holes 0, minimum size 13 mil
15. Tolerances:
  - Plated-through holes +/- 3 mil
  - Pattern to pattern +/- 6 mil
  - Legend to legend no preference
  - Soldermask to pattern +/- 6 mil
16. Electrical testing needed: YES

## DS9122Q BILL OF MATERIALS (BOM) Rev 0; 11/15

Designator	Quantity	Description	Manufacture Name	Part Number
D1	1	Red LED (0603)	Lite-On Inc	LTST-C193KRKT-5A
D2	1	Green LED (0603)	Dialight	598-8081-107F
D3	1	Yellow LED (0603)	Wurth Electronics Inc	150060YS75000
Q1, Q2, Q3	3	N-Channel MOSFET(SOT-23)	ON SEMICONDUCTOR	BSS138LT1G
R1	1	1.5k $\Omega$ Resistor (0603)	Panasonic Electronic Co	ERJ-3EKF1501V
R2	1	16k $\Omega$ Resistor (0603)	Panasonic Electronic Co	ERJ-3EKF1622V
R3, R5, R6	3	3.3k $\Omega$ Resistor (0603)	Panasonic Electronic Co	ERJ-3EKF3301V
R4	1	2.4k $\Omega$ Resistor (0603)	Vishay Dale	CRCW06032K43FKEA
SR1, SR2	2	6 Pin Header	TE Connectivity	9-146285-0
ST1, ST2	2	3 Pin Header	TE Connectivity	9-146285-0
U1	1	TDFN Clamshell Socket	PLASTRONICS	06QN10T23030
