

# Sure Cross® DX81 FlexPower Supply Module

## Datasheet

The DX81 Battery Supply Module delivers and manages dc voltage from one 3.6 V dc lithium primary battery.

- Wireless solution for powering a FlexPower® Node and sensor device
- Unique power management system to run the FlexPower Node and a device through switched power outputs for up to 5 years, depending upon the power requirements of the device
- Replaceable 3.6 V dc Lithium "D" cell battery
- IP67 sealed enclosure

FlexPower systems allow for a true wireless solution because the Node can be powered by battery power (3.6 to 5.5 V dc). Battery life is application specific. Contact Banner Engineering's application engineers for a battery life calculation for your specific application.

For additional information, updated documentation, and accessories, refer to Banner Engineering's website, [www.bannerengineering.com/surecross](http://www.bannerengineering.com/surecross).

Model	Power	Battery	Cable
DX81	3.6 V dc battery	One 3.6 V Lithium "D" Cell	150 mm (6 in) pigtail cable with a 5-pin M12/Euro-style female quick disconnect (QD)

Refer to the Class I Division 2/Zone 2 control drawings (p/n [143086](#)) for wiring specifications or limitations.

**WARNING: Not To Be Used for Personnel Protection**

Never use this device as a sensing device for personnel protection. Doing so could lead to serious injury or death. This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

## 5-pin M12/Euro-style Wiring

Use the battery supply module to power FlexPower® devices only.

5-pin M12/Euro-style Female Connector	Pin	Wire Color	Description	DX80...C Terminals
	3	Blue	dc common (GND)	V-
	5	Gray <sup>1</sup>	3.6 V dc	B+

## Replacing the Battery

When the FlexPower Supply Module is installed outdoors or in a high humidity environment, apply dielectric grease to the battery terminals to prevent moisture and corrosion buildup.

To replace the lithium "D" cell battery in the FlexPower Supply Module, follow these steps.

1. Unplug the battery module from the SureCross device it powers.
2. Remove the four screws mounting the battery module face plate to the body and remove the face plate.
3. Remove the discharged battery by pressing the battery towards the negative terminal to compress the spring. Pry up on the battery's positive end to remove from the battery holder.

<sup>1</sup> Do not apply more than 5.5 V dc to the gray wire.

4. Replace with a new battery. Only use a 3.6 V lithium battery from Xeno, model number XL-205F.
5. Verify the battery's positive and negative terminals align to the positive and negative terminals of the battery holder mounted within the case. Caution: There is a risk of explosion if the battery is replaced incorrectly.
6. After replacing the battery, allow up to 60 seconds for the device to power up.
7. Properly dispose of your used battery according to local regulations by taking it to a hazardous waste collection site, an e-waste disposal center, or any other facility qualified to accept lithium batteries.

As with all batteries, these are a fire, explosion, and severe burn hazard. Do not burn or expose them to high temperatures. Do not recharge, crush, disassemble, or expose the contents to water.

The battery may be replaced in explosive gas atmospheres.

Replacement battery model number: BWA-BATT-001. For pricing and availability, contact Banner Engineering.

#### WARNING:

- Potential electrostatic charging hazard — only clean with a damp cloth.
- The replacement battery MUST be a Banner approved battery, model number BWA-BATT-001. Use of a different battery will VOID the intrinsic safety rating of this device and may result in an explosion!
- When replacing the battery, the negative end of the battery holder is the side with the spring terminal. This side is marked with a minus (–) sign.
- Do not attempt to recharge the battery. These batteries are not rechargeable. Recharging may cause serious injury to personnel or damage the equipment. Replace only with factory recommended batteries.

## Specifications

#### Estimated Battery Life

19,000 mA-hours

#### Housing

Polycarbonate housing and rotary dial cover; polyester labels; EDPM rubber cover gasket; nitrile rubber, non-sulphur cured button covers

Weight: 0.26 kg (0.57 lbs)

Mounting: #10 or M5 (SS M5 hardware included)

Max. Tightening Torque: 0.56 N·m (5 lbf·in)

#### Wiring Access

One 1/2-inch NPT with 5-pin Euro-style 150 mm pigtail QD

#### Operating Conditions<sup>2</sup>

–40 °C to +85 °C (–40 °F to +185 °F)

95% maximum relative humidity (non-condensing)

Radiated Immunity: 10 V/m (EN 61000-4-3)

#### Environmental Rating

IEC IP67; NEMA 6

#### Shock and Vibration

IEC 68-2-6 and IEC 68-2-27

Shock: 30g, 11 millisecond half sine wave, 18 shocks

Vibration: 0.5 mm p-p, 10 to 60 Hz

#### Certifications

CSA: Class I Division 2 Groups ABCD, Class I Zone 2 AEx/Ex nA II T4  
— Certificate: 1921239

ATEX: II 3 G Ex nA IIC T4 Gc (Group IIC Zone 2) — Certificate LCIE  
10 ATEX 1012 X

Refer to the Class I Division 2/Zone 2 control drawings (p/n [143086](#)) for wiring specifications or limitations. All battery-powered devices must only use the lithium battery manufactured by Xeno, model XL-205F.

<sup>2</sup> Operating the devices at the maximum operating conditions for extended periods can shorten the life of the device.
