Note: When the current rating of the load is less than 10 mA, false operation may occur. This is normal, and the problem can be cured by installing a bleeder resistor in parallel with the load. Use the formulas given here to calculate the power rating and value of the resistor.

$$R \leq \frac{V_s}{10 - i} \text{ (k}\Omega\text{)} \quad P > \frac{V_s^2}{R} \text{ (mW)}$$

- P : Power rating of bleeder resistor
- i : Load current (mA)
- Vs : Supply voltage (V)

# Precautions

## ■ TIGHTENING FORCE

Do not exceed the torque listed in the table at right when tightening the mounting nuts.

Part number	Maximum torque	
	kg-cm	in-lbs
E2K-X4M□□	8	7
E2K-X8M□□	20	17
E2K-X15M□□	20	17

## ■ EFFECTS OF SURROUNDING METAL

When mounting the proximity sensor in or near a metallic panel, be sure to provide a minimum distance as shown in the tables below. This prevents the sensor from being affected by metallic objects other than the target.

### When Mounting Directly to Metal Panel or Object

Drawing dimension	Sensor model		
	E2K-X4M□□	E2K-X8M□□	E2K-X15M□□
$\lambda$	20 mm (0.79 in)	20 mm (0.79 in)	10 mm (0.39 in)
d (dia.)	50 mm (1.97 in)	50 mm (1.97 in)	50 mm (1.97 in)
D	20 mm (0.79 in)	20 mm (0.79 in)	10 mm (0.39 in)
m	8 mm (0.32 in)	12 mm (0.47 in)	25 mm (0.98 in)
n	60 mm (2.36 in)	60 mm (2.36 in)	60 mm (2.36 in)

### When Using Optional Mounting Brackets

Drawing dimension	Sensor model		
	E2K-X4M□□	E2K-X8M□□	E2K-X15M□□

H	30 mm (1.18 in)	30 mm (1.18 in)	30 mm (1.18 in)

## ■ MUTUAL INTERFERENCE

To prevent mutual interference between two sensors, be sure to space the two sensors at a distance greater than that shown in the table below.

Drawing dimension	Sensor model		
	E2K-X4M□□	E2K-X8M□□	E2K-X15M□□
A	80 mm (3.15 in)	150 mm (5.91 in)	300 mm (11.81 in)
B	70 mm (2.76 in)	110 mm (4.33 in)	200 mm (7.87 in)

## ■ REQUIRED WARM-UP TIME BEFORE OPERATION

### DC Switching Sensors

In applying any of the E2K-X□ME series proximity sensors as a voltage output type, note that an unwanted output may be produced momentarily (50 ms max.) when power is applied with a target moving toward the E2K-X□ME1(F1) or with a target moving away from the E2K-X□ME2(F2). After the power application, a minimum of 50 ms is required before the sensor circuit can operate. Move the target toward or away from the proximity sensor after this time period.

### AC Switching Sensors

After applying power to a proximity sensor, a minimum of 100 ms is required before the sensor circuit reaches its steady state. The load is in the OFF state during this period. Do not move the target toward or away from the proximity sensor until the sensor circuit enters the steady state. The operation indicator (LED) will illuminate momentarily when the power is turned ON or OFF, but the output stage circuit is in a normal operating state.

## ■ USING METAL CONDUIT

If a high voltage or power line runs near the proximity sensor cable, be sure to wire the sensor cable through a metal conduit to protect the sensor from malfunctioning or damage.

## ■ SURGE PROTECTION

The proximity sensor is provided with a surge suppressor circuit. However, if any large surge generation source (i.e. motor, welding machine, etc.) exists in the vicinity of the proximity sensor, insert a surge suppressor (such as a varistor) into the surge generating source.
