

## Low clamping single line unidirectional ESD

ST0201 package

### Product status link

ESD051-1F4

#### **Features**

- · Low clamping voltage:
  - -3 V / +9 V (IEC 61000-4-2 contact discharge at 30 ns)
- · Unidirectional diode
- Low leakage current
- ST0201 package
- Complies with the following standards: IEC 61000-4-2 level 4 (exceeds level 4)
  - ±30 kV (air discharge)
  - ±30 kV (contact discharge)

### **Application**

Where transient over voltage protection in ESD sensitive equipment is required, such as:

- · Smartphones, mobile phones and accessories
- · Tablet, PC, netbooks and notebooks
- · Portable multimedia devices and accessories
- · Digital cameras and camcorders
- · Communication and highly integrated systems

### **Description**

The ESD051-1F4 is a unidirectional single line TVS diode designed to protect the power line against EOS and ESD transients.

The device is ideal for applications where board space saving is required.

### 1 Characteristics

Table 1. Absolute maximum ratings (T<sub>amb</sub> = 25 °C)

Symbol		Value	Unit		
V	V Deek mulee welfers	IEC 61000-4-2 contact discharge	±30	kV	
V <sub>pp</sub>	Peak pulse voltage	IEC 61000-4-2 air discharge	±30		
P <sub>pp</sub>	Peak pulse power (8/20 µs	110	W		
I <sub>pp</sub>	Peak pulse current (8/20 μ	11	Α		
T <sub>op</sub>	Operating junction tempera	-55 to 150			
T <sub>stg</sub>	Storage junction temperatu	-65 to 150	°C		
TL	Maximum lead temperature	260			

Figure 1. Electrical characteristics (definitions)

 $\begin{array}{lll} V_{RM} & Stand\text{-off voltage} \\ V_{BR} & Breakdown voltage \text{ at } I_R \\ V_{CL} & Clamping \text{ voltage} \\ I_{RM} & Leakage \text{ current at } V_{RM} \\ I_{PP} & Peak \text{ pulse current} \\ V_F & Forward \text{ voltage drop} \\ R_d & Dynamic \text{ resistance} \end{array}$ 

Table 2. Electrical characteristics (values) (T<sub>amb</sub> = 25° C)

Symbol	Parameter	Test condition	Min.	Тур.	Max.	Unit
V <sub>RM</sub>	Reverse working voltage				5.5	V
V <sub>BR</sub>	Breakdown voltage	I <sub>R</sub> = 1 mA	5.8			V
I <sub>RM</sub>	Leakage current	V <sub>RM</sub> = 5.5 V			100	nA
V <sub>CL</sub> Clamping voltage	Clamping voltage	IEC 61000-4-2, +8 kV contact measured at 30 ns		9.0		V
	Ciamping Voltage	IEC 61000-4-2, -8 kV contact measured at 30 ns		-3.0		
	PD Dynamic resistance, pulse duration 100 ns	Direct		0.17		Ω
		Forward		0.14		Ω
C <sub>LINE</sub>	Line capacitance	V <sub>LINE</sub> = 0 V, F = 1 MHz, V <sub>OSC</sub> = 30 mV		110		pF

## Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: www.st.com. ECOPACK® is an ST trademark.

## 3 Recommendation on PCB assembly

## 3.1 Footprint

## 3.2 Stencil opening design

- 1. Recommended design reference
  - a. Stencil opening dimensions: 75  $\mu m$

Figure 12. Stencil opening recommendations

DS12619 - Rev 2 page 6/10

### 3.3 Solder paste

- 1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
- 2. "No clean" solder paste is recommended.
- 3. Offers a high tack force to resist component movement during high speed.
- 4. Use solder paste with fine particles: powder particle size 20-38 μm.

#### 3.4 Placement

- 1. Manual positioning is not recommended.
- 2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
- 3. Standard tolerance of ±0.05 mm is recommended.
- 4. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
- To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
- For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

### 3.5 PCB design preference

- 1. To control the solder paste amount, the closed via is recommended instead of open vias.
- 2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

#### 3.6 Reflow profile

Figure 13. ST ECOPACK® recommended soldering reflow profile for PCB mounting

Note: Minimize air convection currents in the reflow oven to avoid component movement. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.
