

Automotive dual Transil™ array for ESD protection

Datasheet - production data

Features

- AEC-Q101 qualified
- Dual unidirectional Transil functions
- Low leakage current: I_R max. < 20 μ A at V_{BR}
- 300 W peak pulse power (8/20 μ s)

Benefits

- High ESD protection level: up to 25 kV
- High integration
- Suitable for high density boards
- AEC-Q101 qualified

Complies with the following standards

- ISO 10605: C = 330 pF, R = 330 Ω
 - 30 kV (air discharge)
 - 30 kV (contact discharge)
- ISO 7637-3 fast transient
 - Pulse a: $V_S = -150$ V
 - Pulse b: $V_S = +100$ V
- ISO 7637-3 slow transient
 - Positive pulse: $V_S = +85$ V
 - Negative pulse : $V_S = -85$ V

Applications

Where transient overvoltage protection in ESD sensitive equipment is required, such as:

- Entertainment
- Signal communications
- Connectivity
- Comfort and convenience

Description

This device is a diode array designed to protect 1 line or 2 lines against ESD transients.

The device is ideal for applications where both reduced line capacitance and board space saving are required

It can also be used as bidirectional suppressor by connecting only pin 1 and 2.

4 Recommendation on PCB assembly

4.1 Solder paste

1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
2. "No clean" solder paste is recommended.
3. Offers a high tack force to resist component movement during high speed.
4. Use solder paste with fine particles: powder particle size 20-45 μm .

4.2 Placement

1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
3. Standard tolerance of ± 0.05 mm is recommended.
4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

4.3 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

4.4 Reflow profile

Figure 13: ST ECOPACK® recommended soldering reflow profile for PCB mounting

Minimize air convection currents in the reflow oven to avoid component movement.

5 Ordering information
