

## Description

E-T-A's ESX10-T electronic circuit protector is only 12.5 mm wide and selectively protects all DC 24 V load circuits, thereby increasing the uptime of machines and systems. This is achieved by a combination of active electronic current limitation in the event of a short circuit and overload disconnection typically from 1.1 times rated current. The ESX10-T responds faster than frequently used DC 24 V switch mode power supplies without tripping fast and thus prevents disastrous voltage dips of the supply. It works with a single trip curve for all loads. Even capacitive loads up to 75,000 µF can be handled very easily. Besides fixed current ratings from 0.5 A to 12 A, adjustable current rating versions are also available. The integral fail-safe element (fuse) is adjusted to the circuit protector's rated current and can thus very easily be synchronised with the wired cable cross section. This makes planning much easier.

**US patent number:** US 8,237,311 B2

**ESX10-TD**

## Features

- Track-mountable
- Active linear current limitation
- Capacitive loads up to 75,000 µF
- ESX10-TA/-TB: fixed current ratings 0.5 A...12 A
- ESX10-TD: adjustable current ratings, e.g. [0,5 A / 1 A / 2 A]; [2 A / 4 A / 6 A]; [6 A / 8 A / 10 A]
- Approvals: UL, CSA, DNV GL
- OPTION: Control inputs, signalling
- OPTION: ATEX and IECEx-approval

## Your benefits

- Increases machine uptime through clear failure detection and stable power supply
- Reduces downtimes through quick fault resolution
- Simplifies planning through clear sizes and ratings
- Saves costs and time through fast and flexible mounting including integral power distribution solution

## Preferred types – for more details on all configurations please see order numbering code

Preferred types are E-T-A products most frequently used by E-T-A customers. We manufacture E-T-A preferred types in particularly high volumes. Our preferred types are supplied at shorter lead times than non-standard versions.

## Compliances

**Technical data ( $T_{amb} = 25\text{ °C}$ ,  $U_B = DC\ 24\ V$ )**

**Operating data**

Operating voltage $U_B$	DC 24 V (18...32 V)
Current ratings $I_N$	<b>fixed rating:</b> <b>types ESX10-TA-... and -TB-...:</b> 0.5 A, 1 A, 2 A, 3 A, 4 A, 6 A, 8 A, 10 A, 12 A <b>adjustable current ratings:</b> <b>type ESX10-TD-...:</b> [0.5 A/1 A/2 A], [2 A/4 A/6 A], [6 A/8 A/10 A]
Standby current $I_0$	in ON condition: typically 20 ... 30 mA depending on signal output
Visual status indication via	<ul style="list-style-type: none"> <li>● multicoloured LED:</li> <li><b>green:</b> <ul style="list-style-type: none"> <li>- device is ON (S1 = ON)</li> <li>- load circuit/Power-MOSFET connected</li> </ul> </li> <li><b>orange:</b> <ul style="list-style-type: none"> <li>- overload or short circuit until electronic disconnection</li> </ul> </li> <li><b>red:</b> <ul style="list-style-type: none"> <li>- device switched OFF electronically</li> <li>- load circuit/Power-MOSFET disconnected</li> <li>- undervoltage (<math>U_B &lt; 8\ V</math>)</li> <li>- after switch-on until the end of the switch-on delay period</li> </ul> </li> <li><b>OFF:</b> <ul style="list-style-type: none"> <li>- manually switched off (S1 = OFF) or device is dead-voltage</li> </ul> </li> <li>● status output SF (optional)</li> <li>● potential-free signal contact F (optional)</li> <li>● On/off position of the switch S1</li> </ul>

**Load circuit**

Load output	power MOSFET switching output (plus switching)
Overload disconnection (OL)	typically $1.1 \times I_N$ (1.05...1.35 $\times I_N$ )
Short circuit current $I_K$	active current limitation with $I_{Limit} =$ typically 1.8/1.5/1.4/1.3 $\times I_N$ , $I_{Limit}$ depending on $I_N$ (typically $I_{Limit}$ - values, see table 1)
Trip times	see time/current characteristic
Trip thresholds/trip times ( $t_1$ , $t_2$ ) at overcurrent ( $I_{Limit}$ see table 1)	<p><b>1. threshold:</b> at <math>I_{load} &gt;</math> typically <math>1.1 \times I_N</math>...<math>I_{Limit}</math> : <math>t_1 =</math> typically 3 s</p> <p><b>2. threshold:</b> at <math>I_{load} = I_{Limit}</math> : <math>t_2 =</math> typically 100 ms...3 s</p>
Temperature disconnection	internal temperature monitoring with electronic disconnection
Low voltage monitoring of load output	with hysteresis, no reset required load "OFF" at $U_B < 8\ V$
Switch-on delay $t_{Start}$ after applying of $U_B$	typically 0.5 s after each ON operation, after reset and
Disconnection of load circuit	electronic disconnection after overload/short circuit

**Technical data ( $T_{amb} = 25\text{ °C}$ ,  $U_B = DC\ 24\ V$ )**

Free-wheeling diode	external free-wheeling diode recommended for inductive load
Parallel connection of several load outputs	not permitted
<b>Signal output F</b>	<b>ESX10-T.-101/-102</b>
Electrical data	potential-free auxiliary change-over contact max. DC 30 V/0.5 A min. 10 V/10 mA
Standard condition LED green	$U_B$ is applied and switch S1 is ON and no overload, no short circuit
OFF condition, LED off	<ul style="list-style-type: none"> <li>● device switched off (switch S1 to OFF)</li> <li>● no operating voltage <math>U_B</math></li> </ul>
Fault condition LED orange electronic disconnection	overload conditions $> 1.1$ times $I_N$ until electronic disconnection
Fault condition LED red	electronic disconnection after overload or short circuit
ESX10-TB-101	single signal, make contact contact open, terminal 13-14
ESX10-TB-102	single signal, make contact contact closed, terminal 11-12
Error	signal output is in fault condition, if <ul style="list-style-type: none"> <li>● there is no operating voltage <math>U_B</math></li> <li>● the ON/OFF switch S1 is in OFF position</li> <li>● the red LED is lighted (electronic disconnection)</li> </ul>
<b>Status output SF</b>	<b>ESX10-T.-114/-124/-127</b>
Electrical data	plus switching signal output, connects $U_B$ to pin 23 Current ratings: DC 24 V/max. 0.2 A (short circuit proof) The status output is connected internally with a 10 kOhm resistor against 0 V.
Status OUT	ESX10-TB-114/-124 (signal status OUT), at $U_B = + 24\ V$ $+ 24\ V = S1$ is ON, load output connected $0\ V = S1$ is ON, load output locked and/ or switch S1 is OFF red LED lighted
Status $\overline{OUT}$	ESX10-TB-127 (signal status OUT inverted), at $U_B = + 24\ V$ $+ 24\ V = S1$ is ON, load output locked red LED lighted. $0\ V = S1$ is ON, load output connected and/or switch S1 is OFF.
OFF condition	0 V level at status output whenever: <ul style="list-style-type: none"> <li>● switch S1 is in ON position, but device is still in ON delay</li> <li>● switch S1 in OFF position, or control signal OFF, device is switched off</li> <li>● No operating voltage <math>U_B</math></li> </ul>
<b>Reset input RE</b>	<b>ESX10-T.-124/-127</b>
Electrical data	voltage max. DC 32 V High $> DC\ 8\ V \leq DC\ 32\ V$ Low $< DC\ 3\ V > 0\ V$ current consumption typically 2.6 mA (DC 24 V) min. pulse duration 10 ms

4

## Technical data (T<sub>amb</sub> = 25 °C, U<sub>B</sub> = DC 24 V)

Reset signal RE terminal 22	with the falling edge of a + DC 24 V pulse the electronically blocked ESX10-TB-124/-127 can be reset via an external momentary switch. A joint reset signal can also be applied to more than one device at a time. Devices in ON condition will remain unaffected.
<b>Control input I<sub>N+</sub></b>	<b>ESX10-T-114</b>
Electrical data	as reset input RE
Control signal I <sub>N+</sub> by a Terminal 21	+24 V level (HIGH): device is switched on remote ON/OFF signal. 0 V level (LOW) device is switched off by a remote ON/OFF signal.
Switch S1 ON/OFF a HIGH level is applied to	device can only be S1 switched on when I <sub>N+</sub>
LED indication	ON: LED green OFF: LED red

### General data

Fail-safe element	back-up fuse for ESX10-T <b>not required</b> , due to an integral redundant fail-safe element (protective element)
-------------------	--

### Terminals LINE+ / LOAD+ / 0V

screw terminals	M4
max. cable cross section rigid and flexible	0.5 - 16 mm <sup>2</sup>
flexible with wire end ferrule w/wo plastic sleeve	0.5 mm – 10 mm <sup>2</sup> AWG20 - AWG6 str./sol.
stripping length	10 mm
tightening torque (EN60934)	1.5 - 1.8 Nm
multi-lead connection (2 identical cables) rigid / flexible	0.5 – 4 mm <sup>2</sup>
flexible with wire end ferrule without plastic sleeve	0.5 – 2.5 mm <sup>2</sup>
flexible with TWIN wire end ferrule with plastic sleeve	0.5 – 6 mm <sup>2</sup>

### Terminals signal terminals

Screw terminals	M3
max. cable cross section flexible with wire end ferrule w/wo plastic sleeve	0.25 – 2.5 mm <sup>2</sup> AWG24 - AWG14 str./sol.
stripping length	8 mm
tightening torque (EN60934)	0.5 - 0.6 Nm
Housing material	moulded
Mounting	symmetrical rail to EN 60715-35x7.5
Ambient temperature	-25...60 °C <sup>1)</sup> (without condensation, cf. EN 60204-1) <sup>1)</sup> ambient temperature range can differ depending on approvals.
Storage temperature	-40...70 °C
Humidity	96 hrs / 95% RH 40°C to IEC 60068-2-78, test Cab climate class 3K3 to EN60721
Vibration	3g test to IEC 60068-2-6, test Fc
Protection class	housing IP20 EN60529 terminals IP20 DIN 60529

## Technical data (T<sub>amb</sub> = 25 °C, U<sub>B</sub> = DC 24 V)

EMC requirements (EMC directive, CE marking)	noise emission EN 61000-6-3 noise immunity: EN 61000-6-2
Insulation co-ordination (IEC 60934)	0.5 kV / pollution degree 2 reinforced insulation at operating area
Dielectric strength	max. DC 32 V (load circuit)
Insulation resistance (OFF condition:)	n/a, only electronic disconnection
Conformity	CE marking to 2014/30/EU
Dimensions (w x h x d)	12.5 x 80 x 83 mm
Mass	approx. 65 g

## Preferred types

Preferred types are E-T-A products most frequently used by E-T-A customers. We manufacture E-T-A preferred types in particularly high

volumes. Our preferred types are supplied at shorter lead times than non-standard versions.

### Notes

- The user has to ensure that the cable cross section of the load circuit in question complies with the current rating of the ESX10-T used.
- In addition special precautions have to be taken in the system or machinery to exclude automatic re-start (e.g. by using a safety PLC) (cf. Machinery Directive 2006/42/EG und EN 60204-1, Safety of Machinery). In the event of a failure (short circuit/overload) the load circuit will be disconnected electronically by the ESX10-T.

### Connection diagram ESX10-TB-6A (example)

Typical time/current characteristic ( $T_{amb} = 25\text{ }^{\circ}\text{C}$ )

- In a range of  $1.1...1.8 \times I_N$  the trip time is typically 3 s. (e.g. ESX10-TB-...-6 A)
- The electronic current limitation typically begins in at  $1.8 \times I_N$ . This means: under all overload conditions (independent of power supply and load circuit resistance) **typically 1.8 times rated current is applied until disconnection**. The corresponding current limitation value  $I_{Limit}$  depends on the current rating of the device  $I_N$  (see table 1) The trip time varies between 100 ms and 3 s depending on the multiple of the current rating or at short circuit ( $I_K$ ).
- Without the current limitation getting into effect at typically  $1.8 \times I_N$  there would be a much higher overcurrent in the event of an overload or short circuit.

**Mounting examples for ESX10-T**

5 ESX10-TA with busbars

5 ESX10-TB with busbars and jumpers

5 ESX10-TD with busbars

**Description of installation:**

With a block of devices the busbars have to be inserted before wiring.  
Max. 10 plug-in cycles for busbars allowed.

**Recommendation:**

The line entry busbars and signal busbars should be interrupted after 10 devices and line entry should start anew.

**Table of busbar lengths**

Type ESX10-TA-100-DC24V-0.5A can be used as a supply module including protection of auxiliary circuit

Optional: passive supply module AD-TX-EM01 (without protection)

**ESX10-TB-102**

Single signalisation with common line entry

Type ESX10-TA-100-DC24V-0.5A can be used as a supply module including protection of auxiliary circuit

Optional: passive supply module AD-TX-EM01 (without protection)

### Description

The ESX10-T has an integral power distribution system. The following wirings can be carried out with different plug-in type busbars:

- LINE +(DC 24 V)
- 0 V
- **Important:** The electronic devices ESX10-T require a 0 V connection.
- Auxiliary contacts
- Reset inputs

### Accessories

#### Busbars for LINE+ and 0 V

ampacity with one input  $I_{max}$  50 A  
 (recommendation: central supply)  
 ampacity with two inputs  $I_{max}$  63 A  
 grey insulated, length: 500 mm  
**part no. X 222 611 02**

#### Signal busbars for aux. contacts and reset inputs

suitable for signal busbars ESX10-TB-...  
 ampacity with one input  $I_{max}$  1 A  
 with aux. contacts connected in series  $I_{max}$  0.5 A  
 grey insulated, length: 500 mm  
**part no. X 222 005 03**

#### Busbars for LINE+ and 0 V

grey insulated  
 max. 10 plug-in cycles allowed

**X 222 611 22** (block of 2 ESX10-Ts), length: 22 mm  
**X 222 611 34** (block of 3 ESX10-Ts), length: 34.5 mm  
**X 222 611 47** (block of 4 ESX10-Ts), length: 47 mm  
**X 222 611 59** (block of 5 ESX10-Ts), length: 59.5 mm  
 Packaging unit: 10 pcs

**X 222 611 72** (block of 6 ESX10-Ts), length: 72 mm  
**X 222 611 97** (block of 8 ESX10-Ts), length: 97 mm  
**X 222 611 12** (block of 10 ESX10-Ts), length: 122 mm  
 Packaging unit: 4 pcs

#### Busbars for auxiliary contacts

suitable for signal busbars ESX10-TB-...  
 grey insulated, length: 21 mm  
**part no. X 222 005 13**  
 Packaging unit: 10 pcs

#### Insulated wire bridge (for aux. contact)

optional as jumper for ESX10-TB-101.../ESX10-TD-101...  
 for group signalling  
 (series connection of make contacts 13 - 14)  
**X 223 108 01**  
 Packaging unit: 10 pcs

#### Connector bus link -K10

suitable for auxiliary contacts (series connection)  
**X 210 589 02** (1.5 mm<sup>2</sup>, brown),
