

EV2661-C-00A

Evaluation Board of 500mA Linear Charger with PPM for SingleCell Li-ion Battery

The Future of Analog IC Technology

DESCRIPTION

The EV2661-C-00A is an evaluation board for the MP2661, a highly-integrated single-cell Li-Ion/Li-Polymer battery charger with system power path management, targeted at space limited portable applications. It takes input power from either an AC adapter or a USB port to supply the system load and charge the battery independently. The charger section features trickle charge, constant current (CC) and constant voltage (CV) regulation, charge termination and charge status.

EV2661 ensures the continuous power to the system by automatically selecting the input, the battery or both to power the system.

EV2661 provides system short circuit protection to prevent the Li-Ion battery from being damaged due to excessive high current.

EV2661 cuts off the path between battery and system when battery UVLO to prevent the Li-Ion battery from being overly discharged.

Through the I2C connector on EV2661, the customer can program the charging parameters, such as: input current limit, input voltage regulation limit, charging current, battery regulation voltage, and battery UVLO.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	4.6 - 5.5	V
Battery Voltage	V_{BATT}	3.60 - 4.545	V
Input Current Limit	I _{IN} Limit	85 - 455	mA
V _{IN} Regulation Voltage	V _{IN} Limit	V _{BATT} +400mV	V
Charge Current	I _{CHG}	8 - 535	mA
Discharge Current	I _{DSG}	400 - 3200	mA

FEATURES

- Fully Autonomous Charger for Single-Cell Li-Ion/Polymer Batteries
- Current Limit for USB Port
- Complete Power Path Management for Simultaneously Powering the System and Charging the Battery
- 0.5% Charging Voltage Accuracy
- 12V Maximum Voltage for the Input Source
- I²C Interface for Setting charging Parameters and Status Reporting
- Robust Charging Protection Including Battery Temperature Monitor and Programmable Timer
- Battery Disconnection Function

APPLICATIONS

- Wearable devices
- Smart Handheld Devices
- Fitness Accessories
- Smart Watches

PRINTED CIRCUIT BOARD LAYOUT

QUICK START GUIDE

This board is designed for MP2661 which is a highly-integrated single-cell Li-Ion/Li-Polymer battery charger with system power path management function. And layout accommodates most commonly used capacitors. The default function of this board is preset for charger mode and the charge full voltage is preset to 4.200V for 1 cell Li-Ion battery.

Evaluation Platform Preparation:

1) USB-to-I²C Communication Kit

Figure4 USB-to-I²C Communication Kit

2) Software - double-click on the MP2661 Evaluation Kit_R0.6.EXE file and open the software. The software supports the Windows® XP operating systems.

3) A computer with at least one USB port and a USB cable. The MP2661 evaluation software must be properly installed.

4) Original Test Setup for MP2661 in Figure5

5) Turn on the computer. Launch the MP2661 evaluation software. The main window of the software is shown in Figure 6.

Procedure

Make sure all the connections are normal -- the EVPMBUS connected and EV2661-C-00A connected. It is ready to run the program!

Others

1. LDO FET Control:

This bit only controls the on/off of the LDO FET.

2. BATT FET Control:

	BATT FET	
CHG ON	C CHG OFF	DSG OFF

CHG ON and CHG OFF only control the on/off of the Battery FET in charge mode.

DSG OFF selected could turn off the Battery FET at both charge and discharge mode.

DSG OFF unselected could not turn on Battery FET; pull INT to low by push button could turn on Battery FET when it's turned off by DSG OFF.
