0.6A, 2MHz, 36V Step-Down Converter Evaluation Board

The Future of Analog IC Technology

DESCRIPTION

The EVQ2451-G-33-00A is an evaluation board for the MPQ2451, a fixed 2MHz frequency stepdown switching regulator with an integrated internal high-side high voltage power MOSFET. The IC provides 0.6A output with current mode control for fast loop response and easy compensation.

High power conversion efficiency over a wide load range is achieved by scaling down the switching frequency at light load condition to reduce the switching and gate driving losses.

The soft-start function helps prevent inductor current runaway during startup and thermal shutdown provides reliable, fault tolerant operation.

By switching at 2MHz, smaller value inductor and input/output capacitor can be used to lower down cost and save board space.
