

### DESCRIPTION

The MPQ3426 is a current-mode step-up converter with a 6A, 90mΩ internal switch that provides a highly efficient regulator with a fast response. The MPQ3426 features a programmable frequency of up to 2MHz that allows for easy filtering and reduces noise. An external compensation pin gives the user flexibility in setting loop dynamics, and uses small, low-ESR, ceramic output capacitors. Soft-start results in a small inrush current and can be programmed with an external capacitor. The MPQ3426 operates from an input voltage as low as 3.2V and can generate up to a 35V output.

The MPQ3426's features include under-voltage lockout, current limiting, and thermal overload protection. The MPQ3426 is available in a low profile 14-pin 3mm×4mm QFN package with an exposed pad.

### FEATURES

- 6A, 90mΩ, 45V Power MOSFET
- Uses Very Small Capacitors and Inductors
- Wide Input Range: 3.2V to 22V
- Output Voltage as High as 35V
- Programmable  $f_{sw}$ : 300kHz to 2MHz
- Programmable UVLO, Soft-Start, UVLO Hysteresis
- Micropower Shutdown <1μA
- Thermal Shutdown 160°C
- Available in 14-Pin 3mm×4mm QFN Package

### APPLICATIONS

- Telecom—Power Supplies
- Audio—Microphone and Tuner Bias
- Automotive

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. MPS<sup>®</sup> and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

### ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	6-9	V
Output Voltage	$V_{OUT}$	12	V
Output Current	$I_{OUT}$	2	A

### EVQ3426-L-00A EVALUATION BOARD

(L x W x H) 2.5" x 2.5" x 0.4"  
(6.35cm x 6.35cm x 1.0cm)

Board Number	IC Number
EVQ3426-L-00A	MPQ3426DL

### Efficiency

## QUICK START GUIDE

The output voltage of this board is set to 12V. The frequency is set to 600kHz. The board layout accommodates most commonly used inductors and output capacitors.

1. Preset the power supply to  $6V \leq V_{IN} \leq 9V$ .
2. Turn the power supply off.
3. Connect the power supply terminals to:
  - a. Positive (+): VIN
  - b. Negative (-): GND
4. Connect the load to:
  - a. Positive (+): VOUT
  - b. Negative (-): GND
5. Make sure the CN1 jumper is installed
6. Turn the power supply on after making the connections.
7. The MPQ3426 is enabled on the evaluation board once VIN is applied.
8. The output voltage VOUT can be changed by varying R2. Calculate the new value using the formula:  $R2 = \left(\frac{V_{OUT}}{V_{FB}} - 1\right) \times R3$

Where  $V_{FB} = 1.225V$  and  $R3 = 20k\Omega$

9. The frequency can be changed by adjusting R5. The formula is:  $F_{SET} = 23 \times (R5^{-0.86})$   
Where FSET is in MHz and R5 is in  $k\Omega$
