

#### GENERAL DESCRIPTION

The F2914 is a high reliability, low insertion loss, 50  $\Omega$  SP4T absorptive RF switch designed for a multitude of wireless and other RF applications. This device covers a broad frequency range from 400 MHz to 8000 MHz. In addition to providing low insertion loss, the F2914 also delivers excellent linearity and isolation performance while providing a 50  $\Omega$  termination to the unused RF ports. The F2914 also includes a patent pending constant impedance ( $K_Z$ ) feature.  $K_Z$  improves system hot switching ruggedness, minimizes LO pulling in VCOs, and reduces phase and amplitude variations in distribution networks. It is also ideal for dynamic switching/selection between two or more amplifiers while avoiding damage to upstream/downstream sensitive devices such as PAs and ADCs.

The F2914 uses a single positive supply voltage supporting three logic control pins using either 3.3 V or 1.8 V control logic. Connecting a negative voltage to pin 20 disables the internal negative voltage generator and becomes the negative supply.

#### COMPETITIVE ADVANTAGE

The F2914 provides constant impedance in all RF ports during transitions improving a system's hot-switching ruggedness. The device also supports high power handling, and high isolation; particularly important for DPD receiver use.
