Receiver for Digital Signals Types G 3430 1149, G 3430 2249, G 3430 4443

G 3430 4443 024

• 1-, 2- or 4-channel receiver

- · Galvanically separated SPDT or SPST relay outputs
- Load: 1 x 10 A/250 VAC 2 x 10 A/250 VAC 4 x 5 A/250 VAC
- H4-housing
- For mounting on DIN-rail (EN 50022)
- LED-indications for supply, outputs and
- Dupline[®] carrier AC or DC power supply

Ordering Key

- Channel coding by GAP 1605
- (see the data sheet on GAP 1605 for details)

Product Description

Dupline[®] receiver. SPDT relay outputs for control of 1 or 2 loads of up to 250

VAC/10 A or SPST relay outputs for control of 4 loads of up to 250 VAC/5 A.

Rated impulse withstand		Rated impulse withstand			
voltage 230	4 kV	voltage	800 V		
115	2.5 kV	Dielectric voltage			
024	800 V	Supply - Dupline	≥ 200 VAC (rms)		
Dielectric voltage		Supply - Outputs	\geq 4 kVAC (rms)		
Supply - Dupline®	\geq 4 kVAC (rms)				
Supply - Outputs	≥ 4 kVAC (rms)				

General Specifications

Output OFF delay	
Upon loss of Dupline carrier	20 ms
Power ON delay	Typ. 2 s
Power OFF delay	≤ 1 s
Indication for	
Supply ON	LED, green
Output ON	LED, red (one per output)
Dupline [®] carrier	LED, yellow
Environment	
Degree of protection	IP 20
Pollution degree	3 (IEC 60664)
Operating temperature	-20° to +50°C (-4° to +122°F)
Storage temperature	-50° to +85°C (-58° to +185°F)
Humidity (non-condensing)	20 to 80%
Mechanical resistance	
Shock	15 G (11 ms)
Vibration	2 G (6 to 55 Hz)
Dimensions	
Material	
(see Technical informations)	H4-housing
Weight	
G 3430 1149, G 3430 2249	250 g
G 3430 4443	300 g
	3

Mode of Operation

1-channel receiver with change-over contact output

The output is coded by means of the code programmer GAP 1605.

The output is normally OFF. When a transmitter coded to the selected channel is activated, the output turns on and remains on until the respective channel becomes deactivated. The default setting is such that upon loss of Dupline[®] carrier the output goes off.

2-channel receiver with two change-over contact outputs

Each output may be coded individually by means of the code programmer GAP 1605. The outputs are normally off.

When a transmitter coded to the selected channel is activated, the output turns on and remains on until the respective channel becomes deactivated. The default setting of the module is such that upon loss of Dupline[®] carrier **all** outputs go off.

UD

4-channel receiver with four normally open contact outputs

Each output may be coded individually by means of the code programmer GAP 1605. The default setting of the module is such that upon loss of Dupline[®] carrier **all** outputs go off.

For changing the default setting, please refer to the datasheet on GAP 1605.

Operation Diagram
