Mode of Operation

G 3430 55.1 ... 8-channel receivers with 8 open collector NPN or PNP outputs

Each output may be coded individually by means of the code programmer GAP 1605. See separate data sheet.

The outputs are normally off. When a transmitter coded to the selected channel is activated, the output turns on and remains on until the respective channel becomes deactivated (interruption or short-circuiting of Dupline® carrier).

Derating Curve

The curve shows the current allowed per output at different temperatures. The dotted line indicates the total load capability per receiver at different temperatures.
