HCPL-7723/0723

50-MBd 2-ns PWD High-Speed CMOS Optocoupler

Description

Available in either 8-pin DIP or SO.8 package style respectively, the Broadcom® HCPL-7723 or HCPL-0723 optocoupler utilize the latest CMOS IC technology to achieve outstanding speed performance of minimum 50 MBd data rate and 2-ns maximum pulse width distortion.

Basic building blocks of HCPL-7723/0723 are a CMOS LED driver IC, a high speed LED and a CMOS detector IC. A CMOS logic input signal controls the LED driver IC, which supplies current to the LED. The detector IC incorporates an integrated photodiode, a high-speed transimpedance amplifier, and a voltage comparator with an output driver.

CAUTION! It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation, which may be induced by ESD. The components featured in this data sheet are not to be used in military or aerospace applications or environments.

Features

- +5V CMOS compatibility
- High speed: 50 MBd min.
- 2-ns max. pulse width distortion
- 22-ns max. propagation delay
- 16 ns max. propagation delay skew
- 10 kV/µs min. common mode rejection
- –40 to 85°C temperature range
- Safety and regulatory approvals:
  - UL recognized:
    - 5000 V_{rms} for 1 min. per UL1577 for HCPL-7723 for option 020
    - 3750 V_{rms} for 1 min. per UL1577 for HCPL-0723
  - CSA component acceptance notice #5
  - IEC/EN/DIN EN 60747-5-5
    - V_{iorm} = 630 V_{peak} for HCPL-7723 option 060
    - V_{iorm} = 567 V_{peak} for HCPL-0723 option 060

Applications

- Digital fieldbus isolation: CC-Link, DeviceNet, Profibus, SDS, Isolated A/D or D/A conversion
- Multiplexed data transmission
- High-speed digital input/output
- Computer peripheral interface
- Microprocessor system interface

Regulatory Information

The HCPL-7723/0723 have been approved by the following organizations:

- **UL —** Recognized under UL1577, component recognition program, File E55361.
- **CSA —** Approval under CSA Component Acceptance Notice #5, File CA88324.
- **IEC/EN/DIN EN 60747-5-5 —** Approved with Maximum Working Insulation Voltage:
  - V_{iorm} = 567 V_{peak} for HCPL-0723
  - V_{iorm} = 630 V_{peak} for HCPL-7723

Solder Reflow Profile

Recommended reflow condition as per JEDEC Standard, J-STD-020 (latest revision). Non-Halide Flux should be used.

Isolation Group		IIIa	IIIa		Material Group (DIN VDE 0110, 1/89, Table 1).

All Broadcom data sheets report the creepage and clearance inherent to the optocoupler component itself. These dimensions are needed as a starting point for the equipment designer when determining the circuit insulation requirements. However, once mounted on a printed circuit board, minimum creepage and clearance requirements must be met as specified for individual equipment standards. For creepage, the shortest distance path along the surface of a printed circuit board between the solder fillets of the input and output leads must be considered. There are recommended techniques such as grooves and ribs, which may be used on a printed circuit board to achieve desired creepage and clearances. Creepage and clearance distances will also change depending on factors such as pollution degree and insulation level.

a. t_{PHL} propagation delay is measured from the 50% level on the falling edge of the V_I signal to the 50% level of the falling edge of the V_O signal. t_{PLH} propagation delay is measured from the 50% level on the rising edge of the V_I signal to the 50% level of the rising edge of the V_O signal.

b. PWD is defined as $|t_{PHL} - t_{PLH}|$. %PWD (percent pulse width distortion) is equal to the PWD divided by pulse width.

c. t_{PSK} is equal to the magnitude of the worst-case difference in t_{PHL} and/or t_{PLH} that will be seen between units at any given temperature within the recommended operating conditions.

d. CM_H is the maximum common mode voltage slew rate that can be sustained while maintaining V_O > 0.8V_{DD2}. CM_L is the maximum common mode voltage slew rate that can be sustained while maintaining V_O < 0.8V. The common mode voltage slew rates apply to both rising and falling common mode voltage edges.

a. Device considered a two-terminal device: pins 1, 2, 3, and 4 shorted together and pins 5, 6, 7, and 8 shorted together.

b. In accordance with UL1577, each HCPL-0723 is proof tested by applying an insulation test voltage≥ 4500 V_{rms} for 1 second (leakage detection current limit, I_{I-O} ≤ 5 µA). Each HCPL-7723 is proof tested by applying an insulation test voltage ≥ 4500 V_{rms} for 1 second (leakage detection current limit. I_{I-O} ≤ 5 µA.)

c. The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating, refer to your equipment level safety specification or Broadcom Application Note 1074, Optocoupler Input-Output Endurance Voltage.

d. C_I is the capacitance measured at pin 2 (V_I).

Application Information

Bypassing and PC Board Layout

The HCPL-7723/0723 optocouplers are extremely easy to use. No external interface circuitry is required because the HCPL-7723/0723 use high-speed CMOS IC technology allowing CMOS logic to be connected directly to the inputs and outputs.

As shown in Figure 7, the only external components required for proper operation are two bypass capacitors. Capacitor values should be between 0.01 µF and 0.1 µF. Each capacitor should be placed as close as possible to the input and output power-supply pins of the optocoupler.
