PRODUCT OVERVIEW

Mini-Circuits' HFCU-1382+ is a miniature low temperature co-fired ceramic (LTCC) high pass filter with a 14.3 to 29 GHz passband supporting a variety of applications. This model provides 2.4 dB typical insertion loss over a wide band due to its rugged monolithic construction. Housed in an 1812 ceramic form factor which is ideal for dense signal chain PCB layouts where it complements MMIC size and performance. The LTCC fabrication process assures minimal RF performance variation while delivering a product that is well suited for environmental extremes of high humidity and temperature.

KEY FEATURES

Features	Advantages
Wide passband, 14.7 GHz	This filter has a very wide passband from 14.3 to 29 GHz.
LTCC Construction	Provides repeatable performance in a rugged, ceramic package well suited for tough environments such as high humidity and temperature extremes.
Small size, 1812	Saves space in dense circuit board layouts and minimizes the effects of parasitics.
Rugged Power handling, 7 Watts	Handles up to 7 Watts in a small 1812 package.

1. Tested in Evaluation Board P/N TB-HFCU-1382+.
2. Bi-directional, RF1 and RF2 ports can be interchanged.
3. This component should not be used as a DC-block. In applications where DC voltage and/or current is present at either the input or output ports, external DC blocking capacitors are required.
4. Typical variation ± 5%.

ABSOLUTE MAXIMUM RATINGS⁵

Parameter	Ratings
Operating Temperature	-55 °C to +125 °C
Storage Temperature	-55 °C to +125 °C
Input Power ⁶	7W @25°C

5. Permanent damage may occur if any of these limits are exceeded.
6. Power rating applies only to signals within the passband. Power rating above +25°C operating temperature decreases linearly to 1.3 W at +125°C.
