

## HIP2100

100V/2A Peak, Low Cost, High Frequency Half Bridge Driver

FN4022  
Rev.16.00  
Aug 8, 2019

The [HIP2100](#) is a high frequency, 100V Half Bridge N-Channel power MOSFET driver IC. The low-side and high-side gate drivers are independently controlled and matched to 8ns. This gives the user maximum flexibility in dead-time selection and driver protocol. Undervoltage protection on both the low-side and high-side supplies force the outputs low. An on-chip diode eliminates the discrete diode required with other driver ICs. A new level-shifter topology yields the low-power benefits of pulsed operation with the safety of DC operation. Unlike some competitors, the high-side output returns to its correct state after a momentary undervoltage of the high-side supply.

### Applications

- Telecom Half Bridge Power Supplies
- Avionics DC/DC Converters
- Two-Switch Forward Converters
- Active Clamp Forward Converters

### Related Literature

For a full list of related documents, visit our website:

- [HIP2100](#) device page

### Features

- Drives N-Channel MOSFET Half Bridge
- SOIC, EPSONIC, and QFN Package Options
- SOIC and EPSONIC Packages Compliant with 100V Conductor Spacing Guidelines of IPC-2221
- Pb-Free (RoHS Compliant)
- Bootstrap Supply Max Voltage to 114VDC
- On-Chip 1Ω Bootstrap Diode
- Fast Propagation Times for Multi-MHz Circuits
- Drives 1000pF Load with Rise and Fall Times Typ 10ns
- CMOS Input Thresholds for Improved Noise Immunity
- Independent Inputs for Non-Half Bridge Topologies
- No Start-Up Problems
- Outputs Unaffected by Supply Glitches, HS Ringing Below Ground, or HS Slewing at High dv/dt
- Low Power Consumption
- Wide Supply Range
- Supply Undervoltage Protection
- 3Ω Driver Output Resistance
- QFN Package:
  - Compliant to JEDEC PUB95 MO-220
  - QFN - Quad Flat No Leads - Package Outline
  - Near Chip Scale Package Footprint, which Improves PCB Efficiency and has a Thinner Profile

NOTES:

- See [TB347](#) for details about reel specifications.
- These Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J-STD-020.
- For Moisture Sensitivity Level (MSL), see the [HIP2100](#) device page. For more information about MSL, see [TB363](#).

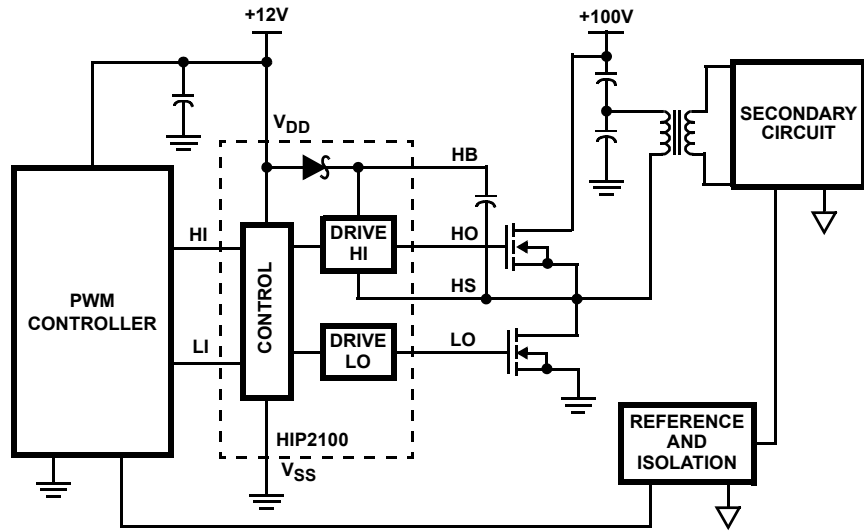

## Pinouts

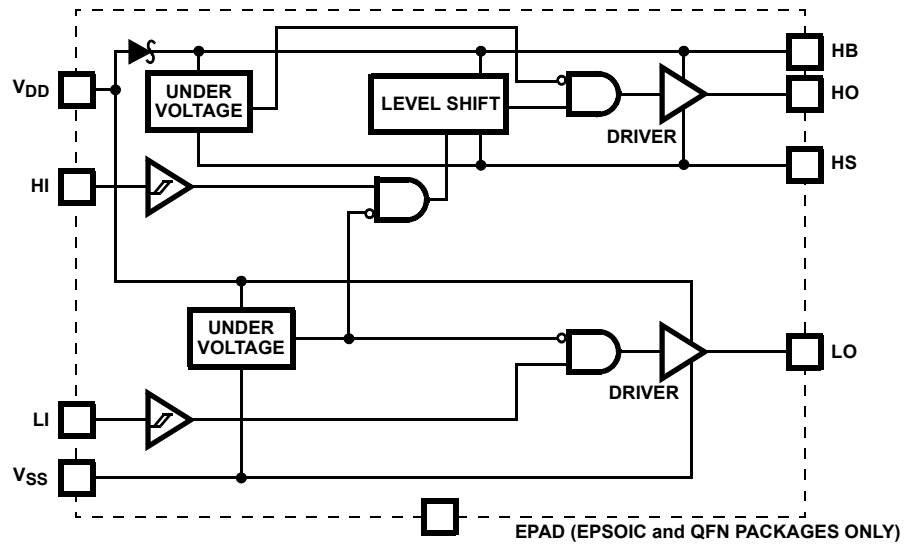

## Pin Descriptions

| SYMBOL          | DESCRIPTION   |
|-----------------|---|
| V <sub>DD</sub> | Positive Supply to lower gate drivers. De-couple this pin to V <sub>SS</sub> . Bootstrap diode connected to HB.   |
| HB              | High-Side Bootstrap supply. External bootstrap capacitor is required. Connect positive side of bootstrap capacitor to this pin. Bootstrap diode is on-chip. |
| HO              | High-Side Output. Connect to gate of High-Side power MOSFET.  |
| HS              | High-Side Source connection. Connect to source of High-Side power MOSFET. Connect negative side of bootstrap capacitor to this pin.                         |
| HI              | High-Side input.  |
| LI              | Low-Side input.   |
| V <sub>SS</sub> | Chip negative supply, generally will be ground.   |
| LO              | Low-Side Output. Connect to gate of Low-Side power MOSFET.  |
| EPAD            | Exposed Pad. Connect to ground or float. The EPAD is electrically isolated from all other pins.   |

**Application Block Diagram**

**Functional Block Diagram**

\*EPAD = Exposed Pad. The EPAD is electrically isolated from all other pins. For best thermal performance connect the EPAD to the PCB power ground plane.

**Absolute Maximum Ratings**

|   |                                  |
|---|----------------------------------|
| Supply Voltage, $V_{DD}$ , $V_{HB}$ - $V_{HS}$ (Notes 4, 5) | -0.3V to 18V                     |
| LI and HI Voltages (Note 5)                                 | -0.3V to $V_{DD}$ +0.3V          |
| Voltage on LO (Note 4)                                      | -0.3V to $V_{DD}$ +0.3V          |
| Voltage on HO (Note 4)                                      | $V_{HS}$ -0.3V to $V_{HB}$ +0.3V |
| Voltage on HS (Continuous) (Note 4)                         | -1V to 110V                      |
| Voltage on HB (Note 4)                                      | +118V                            |
| Average Current in $V_{DD}$ to HB diode                     | 100mA                            |
| ESD Classification  | Class 1 (1kV)                    |

**Maximum Recommended Operating Conditions**

|                                      |  |
|--------------------------------------|--|
| Supply Voltage, $V_{DD}$             | +9V to 14.0VDC   |
| Voltage on HS                        | -1V to 100V  |
| Voltage on HS (Repetitive Transient) | -5V to 105V  |
| Voltage on HB                        | $V_{HS}$ +8V to $V_{HS}$ +14.0V and $V_{DD}$ -1V to $V_{DD}$ +100V |
| HS Slew Rate                         | <50V/ns  |

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions can adversely impact product reliability and result in failures not covered by warranty.

**NOTES:**

- The HIP2100 is capable of derated operation at supply voltages exceeding 14V. [Figure 16 on page 9](#) shows the high-side voltage derating curve for this mode of operation.
- All voltages referenced to  $V_{SS}$  unless otherwise specified.
- $\theta_{JA}$  is measured with the component mounted on a high-effective thermal conductivity test board in free air. See [TB379](#) for details.
- $\theta_{JA}$  is measured in free air with the component mounted on a high-effective thermal conductivity test board with "direct attach" features.  $\theta_{JC}$ , the "case temp" is measured at the center of the exposed metal pad on the package underside. See [TB379](#) for details.

**Package Outline Drawings**

For the most recent package outline drawing, see [M8.15](#).

**M8.15**  
**8 LEAD NARROW BODY SMALL OUTLINE PLASTIC PACKAGE**  
 Rev 4, 1/12

**NOTES:**

1. Dimensioning and tolerancing per ANSI Y14.5M-1994.
2. Package length does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
3. Package width does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
4. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
5. Terminal numbers are shown for reference only.
6. The lead width as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
7. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
8. This outline conforms to JEDEC publication MS-012-AA ISSUE C.

Rev. 2 5/19

Notes:

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion, and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
10. Controlling dimension: Millimeter. Converted inch dimensions are not necessarily exact.
11. Dimensions "P" and "P1" are thermal and/or electrical enhanced variations. Values shown are maximum size of exposed pad within lead count and body size.

For the most recent package outline drawing, see [L16.5x5](#).

Rev. 2 10/02

NOTES:

1. Dimensioning and tolerancing conform to ASME Y14.5-1994.
2. N is the number of terminals.
3. Nd and Ne refer to the number of terminals on each D and E.
4. All dimensions are in millimeters. Angles are in degrees.
5. Dimension b applies to the metallized terminal and is measured between 0.15mm and 0.30mm from the terminal tip.
6. The configuration of the pin #1 identifier is optional, but must be located within the zone indicated. The pin #1 identifier may be either a mold or mark feature.
7. Dimensions D2 and E2 are for the exposed pads which provide improved electrical and thermal performance.
8. Nominal dimensions are provided to assist with PCB Land Pattern Design efforts, see Intersil Technical Brief TB389.
9. Features and dimensions A2, A3, D1, E1, P & θ are present when Anvil singulation method is used and not present for saw singulation.
10. Depending on the method of lead termination at the edge of the package, a maximum 0.15mm pull back (L1) maybe present. L minus L1 to be equal to or greater than 0.3mm.
