

2.5A Li-ion Battery Switching Charger with OTG Boost Integrated

Features

- ◆ Full Automatic and Efficient Charge Management for Large Capacity Lithium Battery
 - Automatic Conditioning, CC/ CV Charge Control, Termination and Recharge
 - 20V Input Voltage Tolerance,
 - 5.9V Max Operating Voltage
 - 550-2500mA Programmable Charge Current
 - 1.5MHz Synchronous PWM, 1 μ H Low Profile Inductor
 - Input Current Regulation Accuracy: $\pm 5\%$ (100mA and 500mA)
 - Charge Voltage Regulation Accuracy: $\pm 1\%$
 - Input Voltage Based Dynamic Power Management(VIN DPM)
 - Power Up without Battery
- ◆ Automatic Adaptor Fault Detection
- ◆ High Impedance Mode with Low Power Consumption
- ◆ Comprehensive Protection
 - Reverse Battery Leakage Protection
 - Thermal Regulation and Shut-down
 - Input & Output Over-Voltage Protection
- ◆ Built-in Input Current and Input Voltage Limit
- ◆ Integrated Power MOSFET with Max 2.5A Charge Current
- ◆ Automatic Charge and USB Compliant Start Sequence
- ◆ Full Range Programmable Charge Parameter through I²C Compatible Interface
 - Input Current Limit Threshold
 - Input Voltage DPM Threshold
 - Charge Termination Current
 - Charge Termination Voltage
 - Safety Timer with Reset Control (32s/30mins)
 - Charge Termination Enable
 - Support 3.4MHz I²C HS Mode
- ◆ USB OTG Boost
 - Input Voltage Range from Battery: 2.5 V~4.5 V
 - 5.0 V/ 1000 mA (Vbat \geq 3.0V)
- ◆ 20-Pin WLCSP Package
- ◆ Pin compatible with HL7005D

Applications

- Smart phone
- MP3 player
- Tablet PC

Order Information

Part Number	HL7007
Default Charge Termination Voltage	4.2V
Maximum Charge Current	2.5A
OTG Mode Maximum Output Current	1A
I ² C Address	6AH
30min Safety Timer and 32s Watch-Dog Timer	Yes
Package	WLCSP
Packing Method	Tape and Reel
Marking Information	HL7007

Typical Application Diagram

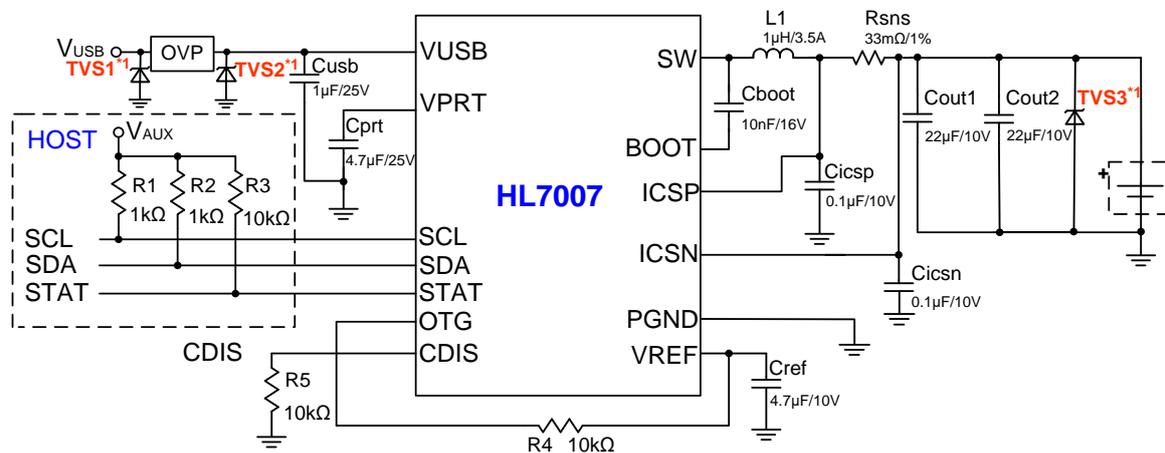

Figure 1. HL7007 Typical Application Diagram

Notice

*1. Careful board level surge protection using TVS diode and OVP device on VIN pin, and TVS diode on VBAT pin, is essential to withstand high voltage spikes that may appear in PCB manufacturing process or end user applications. Without such protection, the IC is prone to electrical over-stress damage.

Description

HL7007 is a compact, flexible, high-efficiency, USB compliant switch-mode charge management device for single cell Li-ion and Li-polymer battery used in a wide range of portable applications. The charge parameters can be programmed through I²C interface. HL7007 integrates a synchronous PWM controller, power MOSFET, input current sensing, high-accuracy current and voltage regulation, and charge termination function into a tiny CSP package.

HL7007 provides a complete automatic three-phase battery charging control: trickle charge, constant-current charge (CC) and constant voltage charge (CV) until the battery reaches the charge termination voltage. The input current is automatically limited to the value set by the host. Charging is terminated based on the battery voltage and a

user selectable minimum current level. A safety timer with reset control provides a safety backup for I²C interface. During normal operation, the IC automatically restarts the charge cycle if the battery voltage falls below an internal threshold and automatically enters sleep mode or high impedance mode when the input supply is not correctly connected. The charge status can be reported to the host through the I²C interface.

During the charging process, the IC monitors its junction temperature (T_J) and reduces the charge current once T_J increases to about 120°C. To support USB OTG device, HL7007 can provide VBUS (5.0V) by boosting the battery voltage.

HL7007 is available in a 20-pin WLCSP package.
