

3MHz 2A Buck Converter in DFN Package

Features

● Input Voltage Range: 2.5V~5.5V

Output Voltage:

1.20V,1.86V,3.30V,1.05V,1.35V,1.50V,1.80V,

1.10V,3.10V,1.08V

Maximum Output Current: 2A

 3MHz PWM with Seamless PWM/PFM Switching for Light-load Efficiency

Excellent Load and Line Transient

Quiescent Current in PFM Tristate: 60uA

Comprehensive Protection

Input Under-Voltage Lockout (UVLO)

Input Over-Voltage Lockout (OVLO)

Over Current and Short-Circuit Protection

Thermal Shut-down

Active Discharge When Disabled

Automatic PFM

Enable Input

Power Good Output

Soft Start

2mm x 2mm DFN-6 Package

Applications

Memory, Hard Disk Drive and SSD

Data Cards

Smart Phones

Tablets

Handheld Devices

Description

HL7504 is a synchronous buck converter optimized to supply different sub systems of portable applications. Its input voltage range is 2.5V to 5.5V. Its output voltage is a factory pre-set value between 1.05V and 3.3V.

HL7504 can deliver up to 2.0A with 80% efficiency, while maintaining over 80% efficiency at load currents as low as 10mA. It operates at a high frequency of 3MHz, which greatly reduces the value of the external components. A wide range of output capacitors can be used to optimize Vout stability during load transients. Inductors from 1.0uH to 2.2uH may be used without affecting loop stability.

At moderate to light loads, Pulse Frequency Modulation (PFM) is used to maintain conversion efficiency with a typical non-switching quiescent current of 39µA. Even

with such a low quiescent current, HL7504 maintains excellent load and line transient responses. At higher loads, the system automatically switches to fixed-frequency Pulse Width Modulation (PWM) operation at 3MHz for minimum V_{OUT} ripple and optimal load transient response. In Shutdown Mode, the supply current drops below 1µA, reducing power consumption.

The HL7504 is available in 2 x 2mm DFN-6 Package.
