

FEATURES

Passive: no dc bias required
Conversion loss: 10 dB typical
Input IP3: 21 dBm typical
RoHS compliant, ultraminiature package: 8-lead MSOP

APPLICATIONS

Base stations
**Personal Computer Memory Card International Association
(PCMCIA) transceivers**
Wireless local loops

GENERAL DESCRIPTION

The HMC213BMS8E is an ultraminiature double balanced mixer in a plastic, 8-lead mini small outline package (MSOP). This passive monolithic microwave integrated circuit (MMIC) mixer is constructed of gallium arsenide (GaAs) Schottky diodes and novel planar transformer baluns on the chip. The

device can be used as an upconverter, downconverter, biphas demodulator or modulator, or phase comparator. The consistent MMIC performance improves system operation and ensures regulatory compliance.

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
RF Input Power	13 dBm
LO Input Power	27 dBm
IF Input Power	13 dBm
IF Source/Sink Current	9 mA
Reflow Temperature	260°C
Continuous Power Dissipation, P_{DISS} ($T_A = 85^\circ\text{C}$, Derate 15.9 mW/ $^\circ\text{C}$ Above 85°C)	1.424 W
Maximum Junction Temperature	175°C
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature Range	-65°C to +150°C
Electrostatic Discharge (ESD) Sensitivity	
Human Body Model	2000 V
Field Induced Charged Device Model	1250 V

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

Thermal performance is directly linked to PCB design and operating environment. Careful attention to PCB thermal design is required.

θ_{JA} is the natural convection junction to ambient thermal resistance measured in a one cubic foot sealed enclosure. θ_{JC} is the junction to case thermal resistance.

Table 3. Thermal Resistance

Package Type	θ_{JA}	θ_{JC}	Unit
RM-8 ¹	165.6	63	$^\circ\text{C}/\text{W}$

¹ See JEDEC standard JESD51-2 for additional information on optimizing the thermal impedance (PCB with 3 × 3 vias).

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

NOTES
 1. NIC = NOT INTERNALLY CONNECTED. THESE PINS CAN BE CONNECTED TO RF/DC GROUND. PERFORMANCE IS NOT AFFECTED.

Figure 2. Pin Configuration

Table 4. Pin Function Descriptions

Pin No.	Mnemonic	Description
1, 3, 6, 8	GND	Ground. Connect these pins to RF/dc ground.
2	LO	Local Oscillator (LO) Port. This pin is ac-coupled and matched to 50 Ω.
4	NIC	Not Internally Connected. These pins can be connected to RF/dc ground. Performance is not affected.
5	IF	Intermediate Frequency (IF) Port. This pin is dc-coupled. For applications not requiring operation to dc, dc block this port externally using a series capacitor of a value chosen to pass the necessary IF frequency range. For operation to dc, this pin must not source or sink more than 9 mA of current or die malfunction and possible die failure can result. See Figure 5 for the interface schematic.
7	RF	Radio Frequency (RF) Port. This pin is ac-coupled and matched to 50 Ω.

SPURIOUS AND HARMONICS PERFORMANCE

Mixer spurious products are measured in dBc from either the RF pin or the IF pin output power level. N/A means not applicable.

LO Harmonics

LO = 13 dBm, and all values in dBc below input LO level and measured at RF port. N/A means not applicable.

Table 5. LO Harmonics at RF

LO Frequency (GHz)	N × LO Spur at RF Port (dBc)			
	1	2	3	4
1.5	37	41	57	77
2.0	28	27	49	60
2.5	29	26	45	51
3.0	31	31	35	49
3.5	32	38	50	48
4.0	31	37	39	63
4.5	34	36	40	58
5.0	34	40	46	59

Downconverter M × N Spurious Outputs

Spur values are (M × RF) – (N × LO).

RF = 3.5 GHz at –10 dBm, LO = 3.6 GHz at 13 dBm.

		N × LO				
		0	1	2	3	4
M × RF	0	N/A	–6	+5	+17	+25
	1	+6	0	+29	+37	+42
	2	+63	+55	+55	+55	+66
	3	+80	+78	+77	+83	+79
	4	+77	+79	+79	+82	+86

Upconverter M × N Spurious Outputs

Spur values are (M × IF_{IN}) + (N × LO).

IF_{IN} = 100 MHz at –10 dBm, LO = 3.6 GHz at 13 dBm.

		N × LO				
		0	1	2	3	4
M × IF	–4	88	84	82	81	77
	–3	89	73	79	79	78
	–2	77	51	59	64	59
	–1	38	0	42	37	40
	0	N/A	0	8	20	19
	+1	38	0	44	36	40
	+2	76	51	61	64	60
	+3	90	66	79	79	79
	+4	89	81	79	80	79

THEORY OF OPERATION

The HMC213BMS8E is an ultraminiature, double balanced mixer that can be used as an upconverter or a downconverter from 1.5 GHz to 4.5 GHz.

When used as a downconverter, the HMC213BMS8E downconverts RF values between 1.5 GHz and 4.5 GHz to IF values between dc and 1.5 GHz.

When used as an upconverter, the mixer upconverts IF values between dc and 1.5 GHz to RF between 1.5 GHz and 4.5 GHz

APPLICATIONS INFORMATION

TYPICAL APPLICATION CIRCUIT

Figure 64 shows the typical application circuit for the HMC213BMS8E. The HMC213BMS8E is a passive device and does not require any external components. The LO and RF pins are internally ac-coupled. The IF pin is internally dc-coupled. When IF operation to dc is not required, use of an external series capacitor of a value chosen to pass the necessary IF frequency range is recommended. When IF operation to dc is required, do not exceed the IF source and sink current rating specified in the Absolute Maximum Ratings section.

Figure 64. Typical Application Circuit

EVALUATION PCB INFORMATION

Use RF circuit design techniques for the PCB. Ensure that signal lines have 50 Ω impedance. Connect the package ground leads directly to the ground plane (see Figure 65). Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation circuit board shown in Figure 65 is available from Analog Devices, Inc., upon request.
