### Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1 - 3, 6, 7, 10 - 13, 16, 18 - 20, 24	N/C	The pins are not connected internally; however, all data shown herein was measured with these pins connected to RF/DC ground externally.	
4, 5	RFINP, RFINN	RF Input pins Connect RF to RFINP and AC couple RFINN to ground via 50 Ohm for single ended operation	
8, 9	GND	These pins and the exposed package bottom must be connected to a high quality RF/DC ground.	
14, 15	VIDEO FB, VIDEO OUT	Video out and feedback. These pins should be shorted to each other (see application circuit). Video out load should be at least 1K Ohm or higher.	
17	EN	Enable pin connected to Vcc1 or Vcc2 for normal operation. Total supply current reduced to less than 3mA when EN is set to 0V.	
21	Vcc2	Bias Supply. Connect supply voltage to these pins with appropriate filtering. Connect Vcc2 with Vcc1. See application circuit. To ensure proper start-up supply rise time should be faster than 100usec

[2] Circuit Board Material: Rogers 4350 or Arlon 25 FR

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
